The use of the Simple Kriging and Universal Kriging methods to estimate the spatial trend in the spatial data is examined. By following the approach of the Simple Kriging methods, a new Modified Kriging method has been developed for better presentation of the spatial pattern of spatial data and error estimation. Results of comparison indicate that the Modified Simple Kriging method can provide better interpolation and error estimation for the mathematical functions. Although the results of practical interpolation obtained by using the three methods are quite comparable, the error estimates by the Simple Kriging and Universal Kriging methods are greater than those of the modified Simple Kriging method and the one standard deviation confidence belts are overlapping each other. This may indicate that the error estimations from the Simple Kriging methods are too great.The Universal Kriging method provides the greatest error estimation among these three methods. Although those results indicate that there is no advantages of using the Universal Kriging method, further study on the proper formula for the generalized covariance function should be carried out. The heart of the Universal Kriging method is to find the correct covariance function, since the isopleths and the error of estimation are very sensitive to it.

38847 **Dry deposition to snow in an urban area.** Dasch, J.M.; Cadle, S.H. (General Motors Research Laboratories, Warren, MI). *Proceedings, Annual Meeting, Air Pollution Control Association;* **1**: 1-15(1985). (CONF-850612—).

From Air Pollution Control Association annual meeting and exhibition; Detroit, MI, USA (16 Jun 1985).

Wet and dry deposition were measured in Warren MI during the 1983-1984 winter. Dry deposition was measured to a snow surface in a cutoff bucket and from the increase in snow core concentrations with time. The deposition velocity was calculated from the ratio of the dry flux to the ambient concentration. The dry deposition velocities calculated to a snow surface were 0.082 cm/s for SO_2, 2.0 for HNO_3, 0.083 for NH_4^+, 2.0 for CA^{++} and 4.3 for Cl. The values were not significantly different for a snow/water surface during melting compared to a snow surface. However, higher values of 0.69 cm/s for SO_2, 6.2 for HNO_3, 0.33 for NH_4^+, and 4.2 for Ca^{++} were found to a deionized water suface in the spring. The higher values could be due to the higher air temperature and a change from a solid to a liquid surface or to greater atmospheric mixing during this period. The relative importance of wet and dry deposition was examined during the snow cover period of December 18 to March 14. Dry deposition was very important accounting for 42-80% of the total flux of the major ions. This was due both to the low precipitation volumes in the winter and the influence of local sources on dry deposition. Dry deposition increased the importance of sulfate relative to nitrate in the snowpack.

38848 **Analysis of wet deposition at an urban location.** Foltman, R.A. (Detroit Edison Co., Detroit, MI). *Proceedings, Annual Meeting, Air Pollution Control Association;* **1**: 1-13(1985). (CONF-850612—).

From Air Pollution Control Association annual meeting and exhibition; Detroit, MI, USA (16 Jun 1985).

Wet deposition data collected at the Detroit Edison urban site provided a clear chemical profile at this location for the period studied. Correlations of major anions with acidity indicate that decreases in pH are associated with increases in sulfates and nitrates. However, other components not measured may have a bearing on pH reductions. The differences between two locations 70 km apart were quite small on the average. Strong local source influences at the urban location were not evident in the limited data set available for study. Wind direction can help determine the ultimate origins of pollutants.

38849 Meso - and synoptic-scale pollutant transport: Review of episode formation and transport meteorology, methods of analysis, and anatomy. Lazaro, M.A. (Argonne National Laboratory, Argonne, IL). *Proceedings, Annual Meeting, Air Pollution Control Association;* 1: 1-19(1985). (CONF-850612—).

From Air Pollution Control Association annual meeting and exhibition; Detroit, MI, USA (16 Jun 1985).

This paper reviews and summarizes the meso- and synoptic-scale pollutant phenomena and the types of meteorological conditions that are associated with the formation of persistent elevated pollution episodes. Various types of wet and dry mesosynoptics conducive to such episodes are identified and reviewed. The importance of gaining a better understanding of how various complex meso-and synoptic-scale systems act to vent pollutants through the top of the planetary boundary layer(PBLO, redistribute pollutants within the PBL, and remove pollutants at the surface is underscored. The status of development, strengths, and weaknesses of four major sourcereceptor analysis approaches are discussed. Eastern North American air-pollution episodes noted in the literature are high-lighted, and the anatomy of two episodes is presented.

38850 Comparison of chemical mechanisms for regional acid deposition. Stockwell, W.R. (National Center for Atmospheric Research, Boulder, CO). *Proceedings, Annual Meeting, Air Pollution Control Association;* 1: 1-11(1985). (CONF-850612—).

From Air Pollution Control Association annual meeting and exhibition; Detroit, MI, USA (16 Jun 1985).

The purpose of this paper is to describe a state-of-the-art gas phase chemical mechanism for use in the EPA/NCAR regional acid deposition model (RADM). The Eulerian regional acid deposition model under development at the National Center for Atmospheric Research will require on the order of tens of thousands of grid cells. The gas phase chemical mechanism must have enough chemical detail to give accurate oxidation rates of sulfur dioxide and nitrogen species. It is also important for the mechanism to give accurate production rates of those species such as hydrogen peroxide, organic peroxides and ozone which are necessary for the oxidation of sulfur dioxide in liquid phase. The mechanism must provide this high level of chemical realism while using a minimum of chemical detail.

38851 Analysis of the environmental need for NO/sub x/ controls on light duty trucks and heavy duty vehicles. Gutfreund; Burton, C.S.; Oliver, W.R.; Haney, J.L.; Hogo, H.; Seigneur, C. (Systems Applications, Inc., San Rafael, CA). *Proceedings, Annual Meeting, Air Pollution Control Association;* 3: vp(1985). (CONF-850612—).

From Air Pollution Control Association annual meeting and exhibition; Detroit, MI, USA (16 Jun 1985).

The paper reports on an ongoing study to evaluate the environmental need for postulated NO/sub x/ controls of heavy duty vehicles, i.e., light duty trucks, and heavy duty trucks (gasoline and diesel fueled), in selected cities where ozone levels exceed the NAAQS and NO_2 levels approach the NAAQS. The study involves the use of the most advanced modeling techniques and comprehensive data bases commensurate with the requirements of the models to investigate the influence of postulated NO/sub x/ controls on annual average NO_2 levels, 1-hour maximum urban ozone levels, 1-hour maximum rural ozone levels, and 1-hour maximum urban NO_2 levels, in 1995 and 2000. The Urban Airshed Model (UAM) is being used to characterize NO/sub x/ control effects on 1-hour maximum ozone concentrations and on 1-hour maximum NO_2 concentrations, in cities where available aerometric data bases for its use exist. Annual average NO_2 levels are being projected with the Climatological Dispersiom Model (CDM), in cities where available emission inventories are compatible with the requirements of CDM. Effects of NO/sub x/ controls on maximum 1-hour rural ozone levels are being projected by means of a trajectory box mode.

38852 Effect of mass transport on the determination of corrosion rates from polarization measurements. Nagy, Z.; Thomas, D.A. (Argonne National Lab., Argonne, IL). pp 230-231 of Proceedings of the fall 1985 meeting of the Electrochemical Society. Pennington, NJ; Electrochemical Society (1985). (CONF-851048—).

From 168. meeting of the Electrochemical Society; Las Vegas, NV, USA (13 Oct 1985).

Many methods have been proposed for the determination of the corrosion current density from polarization curves; the two most commonly used ones are the three-point method and the curve-fitting method. The basis of these methods is a polarization equation that (i) was derived for the complete absence of mass-transport effects or (ii) considers the cathodic partial reaction to be under complete mass-transport control. The mixed control case has been investigated much less often, even though this case may quite frequently reflect practical situations. A completely generalized polarization equation is proposed that can be used as a basis for curve-fitting data evaluation under any conditions. This equation was used to determine thé error caused by the neglect of mass transport effects in conventional data analysis.

5003 Radioactive Materials Monitoring And Transport

REFER ALSO TO CITATION(S) 37545, 37548, 37556, 37560, 37613, 37633, 37641, 37660

38853 (ORNL/M—135) Historical releases of radioactivity to the environment from ORNL. Ohnesorge, W.F. (Oak Ridge National Lab., TN (USA)). May 1986. Contract AC05-84OR21400. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86011372.

This report gives a brief history and assessment of ORNL radionuclide releases to the environment. A short history and an inventory of radioactivity disposed of by shallow land burial and hydrofracture techniques are given along with a brief discussion of the potential environmental impact of these disposed materials. The data available for this report varied greatly in quality. Data on contaminated liquid waste and liquids discharged to the environment are much more reliable than early data on contaminated air discharges and contaminated solid waste. Data for more recent years are more complete and reliable than data obtained from records dating back to the early history of the laboratory. The data presented here do not include materials retrievably stored (with the exception of uranium solid waste data) or inventories of materials stored in operating or surplus facilities since these materials presently have no contact with or loss to the environment.

38854 (SAND—86-0865C) Prediction of radiological dispersal from sabotage incidents involving high explosive. Boughton, B.A. (Sandia National Labs., Albuquerque, NM (USA)). 22 Jun 1986. Contract AC04-76DP00789. 10p. (CONF-860654—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE86011829.

From 27. annual meeting of the Institute of Nuclear Materials Management; New Orleans, LA, USA (22 Jun 1986).

The intentional dispersal of radioactive material from a nuclear facility by use of explosive can result in severe radiological consequences. In many situations, it is important to be able to predict the magnitude and direction of this dispersal for: (a) evacuation and sheltering decisions; and (b) to estimate the potential size of the cleanup operation. Most commonly used predictive methods do not trace the cloud trajectory through its rise to a thermally-equilibrated height but, instead, assume a stabilized height and map the dispersal from this origin. A calculational method which more realistically describes this close-in behavior has been developed. This procedure predicts the cloud height as a function of downwind distance and existing meteorological conditions. Comparisons of these predictions with experimental data will be presented. In addition, the model provides estimates of downwind ground deposition and dose to exposed personnel. The results of these predictions are also presented.

38855 Distribution of cosmogenic ^{7}Be in salt marsh sediments. Casey, W.H.; Larsen, I.L.; Olsen, C.R. (Department of Geosciences, The Pennsylvania State University). *Geophysical Research Letters;* 13: No. 4, 322-325(Apr 1986).

Two related factors affect the vertical distribution and inventory of ^{7}Be (53-day half life) in salt marsh sediments: (1) the movement of pore water, and (II) the vegetation. Infiltration of rainwater into unsaturated sediment distributes ^{7}Be over several centimeters depth without disturbing the sediment fabric. The sediment inventory of ^{7}Be expected from its atmospheric flux could only be accounted for in vegetated areas where foliage traps ^{7}Be from rainfall and surface flow. These factors lead to hetero-geneous vertical and lateral distributions of ^{7}Be throughout the marsh, and may also affect the sediment distribution of the other trace substances, such as ^{210}Pb, ^{137}Cs, and heavy metals.

38856 Radiation measurements in a labyrinth penetration at a high-energy proton accelerator. Cossairt, J.D.; Couch, J.G.; Elwyn, A.J.; Freeman, W.S. *Health Physics;* No. 5, 907-917(Nov 1985).

The efficient design of access penetrations at high-energy proton accelerators is desirable for both economic and personnel protection reasons. This paper reports on a series of measurements made in a personnel access labyrinth which viewed an Al target bombarded by 400-GeV protons from the Fermilab Tevatron. Measurements of absorbed dose in the labyrinth using tissue-equivalent ion chambers were consistent with theoretical predictions of both the relative attenuation through the penetration and the absolute magnitude near the target. The multisphere technique was used to determine the neutron energy spectrum in one section of the labyrinth. A recombination chamber was used to measure the quality factor of the radiation field in two sections of the labyrinth. Good agreement with the quality factor deduced from the multisphere result was obtained at the same measurement location.

38857 (ANL/EES-TM—307) Analysis of inhalable and fine particulate data and evaluation of their prediction models. Chun, K.C.; Fingleton, D.J. (Argonne National Lab., IL (USA)). Mar 1984. Contract W-31-109-ENG-38. 54p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86012219.

In anticipation of size-specific ambient particulate air quality standards, the US Environmental Protection Agency has established an inhalable particulate matter monitoring network on a limited scale. Simple arithmetic average ratio models for predicting inhalable particulate levels have been previously derived by others based on the inhalable particulate concentration data and colocated high-volume sampler data obtained from the monitoring network. In order to improve such models for predicting various size-specific particulate concentration levels from an expanded data base, this report: (1) describes procedures for improved data screening and for calculation of concentrations for particles with aerodynamic diameters less than 10 μm, (2) tests whether the predictive ability of simple arithmetic average ratios can be improved by data stratification by key parameters, and (3) assesses the likelihood of nonattainment at the county level with respect to potential size-specific ambient particulate standards. Seasonal and regional characteristics of various size-specific and total suspended particulate concentration levels are also described.

38858 (UCRL—92534) Bhopal: lessons learned. Greenly, G.D. Jr. (Lawrence Livermore National Lab., CA (USA)). Mar 1986. Contract W-7405-ENG-48. 3p. (CONF-860803—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010977.

From 7. world clean air congress and exhibition; Sydney, Australia (25 Aug 1986).

The risk assessment lesson learned from the Bhopal tragedy is both simple and complex. Practical planning for toxic material releases must start with an understanding of what the risks and possible consequences are. Additionally, plans must be formulated to ensure immediate decisive actions tailored to site specific scenarios, and the possible impacts projected on both the plant and surrounding communities. Most importantly, the planning process must include the communities that could be affected. Such planning will ultimately provide significant financial savings and provide for good public relations, and this makes good business sense in both developed and developing countries. Paraphrasing the adage "a penny saved is a penny earned," a penny spent on emergency preparedness is dollars earned through public awareness. The complex aspect of these simple concepts is overcoming human inertia, i.e., overcoming the "it can't happen here" syndrome in both government and private industry. A world center of excellence (ITRAC), acting as a center for education, research, and development in the area of emergency planning and response, will be the conduit for needed technology transfer to national centers of excellence in emergency planning and response. These national emergency planning and response centers (NARACS), managed by private industry for governments, will be catalysts to action in formulating effective plans involving potentially affected communities and plant management. The ITRAC/NARAC proposal is a simple concept involving complex ideas to solve the simple problem of being prepared for the Bhopal-like emergency which, as experience has demonstrated, will have complex consequences for the unprepared.

5101 Basic Studies

REFER ALSO TO CITATION(S) 37286, 38098, 38881

38859 (DOE/NBB—0078) Comparison of tropical forest surveys. Molofsky, J.; Hall, C.A.S.; Myers, N. (Butler Univ., Indianapolis, IN (USA). Holcomb Research Inst.; Cornell Univ., Ithaca, NY (USA); Myers (Norman), Oxford (UK)). Jun 1986. Contract AC05-84OR21400. 70p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86011699.

This report examines the two most recent studies of tropical forest areas and rates of forest loss: Norman Myers' conversion of Tropical Moist Forests (1980), and the FAO/UNEP Tropical Forest Resources Assessment Project in order to identify and clarify discrepancies between them. The apparent discrepancy between their respective estimates of deforestation rates has been the basis of a continuing controversy. Myers' report was concerned principally with the conversion of virgin forests to other land use and the resulting extinction of tropical species. The FAO/UNEP report emphasized the availability of forest resources to meet the future fuelwood, housing, and economic needs of UN member states. The present paper attempts to identify more precisely the differences between the two studies in order to integrate the large tropical forest data base from these two sources into a cohesive whole. Specifically, we identify those countries covered in both surveys where the largest differences occur. Our study was not designed to assess all discrepancies between Myers and FAO but only the discrepancies for those countries where both investigators have given specific numbers.

38860 Immediate effects of prescribed burning on mineral soil nitrogen in ponderosa pine of New Mexico. Kovacic, D.A.; Swift, D.M.; Ellis, J.E.; Hakonson, T.E. (Colorado State Univ., Fort Collins). *Soil Science;* 141: No. 1, 71-76(Jan 1986). Contract AC09-76SR00819.

From American industrial hygiene conference; Dallas, TX, USA (18-23 May 1986).

Three 0.1-ha ponderosa pine (Pinus ponderosa Dougl. ex Laws) sites were burned in the fall of 1981. The burn was mainly a ground fire. Burn intensity was 980, 1760, and 2280 kJ s^{-1} m^{-1} on sites 1, 2, and 3, respectively. We analyzed the mineral soils on each of these sites for total N, NO_2^- + NO_3^--N and NH_4^+-N prior to prescribed burning, 1 d postburn, and 30 d postburn. On the most intense burn, NH_4^+-N levels increased threefold from preburn (10 ppm) to 1 d postburn (32 ppm), but declined somewhat 30 d following the burn (24 ppm). Concentrations of NO_2^- + NO_3^--N on site 3 rose from 1 ppm preburn and 1 d postburn to 5 ppm 30 d

postburn. There were no significant differences in soil total N after burning. Immediate postburn inorganic N values for ponderosa pine mineral soils have not been previously reported in the literature. It is important to investigate burned soils immediately after burning to better understand sequential processes involved in postfire inorganic N dynamics.

5102 Chemicals Monitoring And Transport

REFER ALSO TO CITATION(S) 37441, 37462, 37842, 37847, 38737, 38792, 38798, 38799, 38891, 38897, 38903

38861 (CONF-8604211—1) **Atmospheric deposition and cation leaching.** Harrison, R.B.; Johnson, D.W. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 32p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012238.

From Atmospheric deposition symposium; Little Rock, AR, USA (20 Apr 1986).

This paper reviews many of the important aspects of soil chemistry that play a role in the rates of soil acidification and contains comparisons of solution chemistry of two sites not subject to acidic precipitation (pH = 5.6) with seven sites that are (pH 4.8 to 4.0). The pH and concentrations of basic cations, aluminum, and anions were determined as precipitation moved through the forest canopy and percolated through the soil profile. Changes in solution chemistry reflect changes in soil chemistry and potential effects on exchangeable cations due to soil cation leaching.

38862 (EPRI-CS/EA/EL—4480, pp 4.17-4.20) **Comparison of PCB analytical methods.** Wong, L.W. (Pacific Gas and Electric Co., San Ramon, CA). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

Gas chromatography has been the accepted method for PCB analysis. Because of the labor involved, it is an expensive analysis. Several alternate methods are now available which are faster, portable, and less expensive. These methods have been evaluated and include the McGraw Edison specific ion electrode method, the CLOR-N-OIL colorimetric method, and the S-Cubed PCBA-102 gas chromatograph/computer. The PCPA-102 appears to be a logical choice as an analytical alternative to GC. The CLOR-N-OIL and McGraw Edison are better suited for screening samples for approximate PCB concentration.

38863 (EPRI-CS/EA/EL—4480, pp 4.21-4.41) **Development of the BPA substation soil PCB testing program.** Plath, D.C. (Bonneville Power Administration, Vancouver, WA). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

In discussing The Bonneville Power Administration's PCB testing program, it is pointed out that setup of instrumentation to ensure airtight systems and extreme cleanliness is of vital importance. Quality assurance procedures are also critical to obtaining good results. Methodologies for the analysis of PCBs in substation soils are discussed, along with sampling plans for the analysis of PCBs. The problems and advantages of using contract labs in this sort of work are discussed. 6 references, 10 figures, 1 table.

38864 (EPRI-CS/EA/EL—4480, pp 4.42-4.43) **Analytical method for the analysis of chlorinated biphenyls in liquids and solids.** Erickson, M.D.; Stanley, J.S.; Turman, J.K.; Radolovich, G.; Heggem, D.T. (Midwest Research Institute, Kansas City, MO). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

The use of the gas chromatograph/electron impact mass spectrometric (GC/EIMS) method yields qualitative information which not only readily differentiates among PCB homologs but also permits elimination of other compounds from quantitation. A variety of general and specific sample preparation options are presented. The method consists of the following steps: The process or product must be sampled such that the specimen collected for analysis is representative of the whole. The sample is mechanically homogenized and subsampled if necessary. The surrogate-spiked sample is extracted and cleaned up at the discretion of the analyst. The PCB content of the sample extract is determined. PCBs are identified by comparison of their retention time and mass spectral intensity ratios to those in calibration standards. PCBs are quantitated by the internal standard technique.

38865 (EPRI-CS/EA/EL—4480, pp 4.44-4.45) **Field measurement of PCB's in soil and sediment using a portable gas chromatograph.** Spittler, T.M. (Environmental Protection Agency, Lexington, MA). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

A field method for extraction and measurement of PCBs from soil and sediment which can be performed in as little as seven minutes after the sample is collected is discussed. The Model 511-06 gas chromatograph made by Analytical Instruments Development Company forms the basis of the technique. Field extraction techniques are discussed. The method has been applied in the field at several PCB spills and cleanup operations. Results of this work are discussed. Several samples have been analyzed by the field technique and the been subjected to standard laboratory PCB analytical procedures. Studies have also been carried out to determine the extraction efficiency of the field method on different Arochlors. Results of this work are discussed.

38866 (EPRI-CS/EA/EL—4480, pp 4.46-4.58) **Distribution of polychlorinated biphenyls within Bonneville Power Administration substation.** Baker, D.W. Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

The Bonneville Power Administration (BPA) is a federal power distribution and marketing agency for some 30 hydroelectric dams in the Columbia River Basin. An analysis is presented of overall PCB soil contamination patterns within fenced BPA substations based on a continuing PCB study which is about one-third complete. Results are included on 13 substations identified for comprehensive sampling and the findings from these substations are reviewed in detail. Levels of soil contamination are considered in relation to the general equipment locations within the substations and maintenance history, in order to check basic assumptions used in developing reduced sampling plans. 3 figures, 3 tables.

38867 (EPRI-CS/EA/EL—4480, pp 5.1-5.5) **Pilot plant studies for solvent extraction of polychlorinated biphenyl (PCB) from soil.** Saunders, M.B. (Martin Marietta Energy Systems, Oak Ridge, TN). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

Soilex is a process for a solvent removal of PCB from soils. A study was carried out to determine the importance of component (soil-water-kerosene) variables and mixing time. Soil-to-water ratios of 3 to 5 and soil-to-kerosene ratios of 3 to 5 are best. No difference in extraction performance could be determined between 15 and 30 minute mixing times. A pilot plant was operated for 19 days. A preliminary cost estimate of the entire solvent leach and PCB removal from soil process was completed. The solvent extraction process cost was about half of the direct incineration cost. 2 figures.

38868 (EPRI-CS/EA/EL—4480, pp 5.6-5.12) **Polychlorinated dibenzofuran contamination of the State Highway Department Office Building in Santa Fe, New Mexico as a result of a PCB transformer malfunction.** DeRoos, F.L.; Watson, S.C.; Hatchel, J.A. (Battelle Memorial Institute, Columbus, OH). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

On June 17, 1985, an electrical malfunction occurred in the New Mexico State Highway Department Office Building in Santa Fe, New Mexico. A transformer containing 245 gallons of askarel consisting of Aroclor 1260 and a mixture of tri- and tetrachlorinated benzenes overheated resulting in the release of vaporized askarel. The vapor was distributed throughout the building by convective air currents and by mechanical transfer via the heating, ventilation, and air conditioning systems. Air and surface wipe samples, as well as coolant fluid samples were collected within seven days of the malfunction. The total concentrations of polychlorinated dibenzofurans (PCDF) in the air ranged from approximately 10 to 500 pg/m^3. Polychlorinated dibenzo-p-dioxins (PCDD) were detected in the range of 7 to 21 pg/m^3. 4 figures.

38869 (EPRI-CS/EA/EL—4480, pp 5.13-5.16) **Development of a spray - vacuum head and support system for the removal of PCB contamination from walls, floors, and other surfaces.** Ashley, K.C. (Quadrex HPS, Inc., Gainesville, FL). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

Early engineering work by Quadrex HPS addressed the unique problem of removal of plutonium waste materials which coated the interior surfaces of a glove-box type assembly chamber. A prototype surface-decontamination system was configured which consisted of a cleaning head and support system. The design and operation of the system are described. A research program is being carried out to modify this system for the fast and effective removal of PCB contamination. The overall program has been divided into a series of fact-finding and development steps with review and assessment occurring at key stages.

38870 (EPRI-CS/EA/EL—4480, pp 5.17-5.22) **Sorption/desorption of polychlorinated biphenyls in soils.** Girvin, D.C.; Sklarew, D.S.; Ainsworth, C.C. (Battelle, Pacific Northwest Labs., Richland, WA). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

The adequacy of currently available data and estimation techniques and models for describing PCB sorption/desorption in soil-water systems are summarized for both typical and low organic carbon soils. Deficiencies or gaps in available data and key unresolved issues are also discussed. Specifically, these areas are: Determination of K/sub p/ to K/sub ow/ correlation coefficients to enable use of extensive K/sub ow/ and other physical data for estimating of K/sub p/s; Determination of the reversibility and release rates of Aroclors from soils in aqueous systems; Sorption/desorption in low organic carbon soils, and; The influence of the surfactants on sorption/desorption and desorption release rates of Aroclors from soils for possible application in aqueous-based soil-washing technology. 15 references.

38871 (EPRI-CS/EA/EL—4480, pp 5.23-5.26) **Desorption of PCBs in a soil-aqueous solution system.** Essington, M.E.; Reaketo, M.R.; Cliath, M.M.; Elseewi, A.A.; Doyle, C.P. Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

The partitioning of capacitor oil Aroclor 1242 between soil and aqueous equilibrium bathing solutions over a wide range of PCB concentrations was characterized. PCB behavior was examined as a function of homolog type and as a function of aqueous solution composition. Aroclor 1242 homolog retention was found to increase in the following order: DCB TCB TTCB, irrespective of solution composition. Solubilities and Freundlich parameters were affected by the composition of the equilibrating solution. The results obtained are expected to provide greater insight into the environmental behavior of the various PCB homologs and to provide usable data to predict the mobility of PCBs in environments exposed to accidental Aroclor spills. 11 references, 2 tables.

38872 (EPRI-CS/EA/EL—4480, pp 5.27-5.30) **Solvent cleaning of PCB - contaminated soils.** Weitzman, L. (Acurex Corp., Cincinnati, OH). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

A pilot-scale study of a novel system for cleaning soils that have been contaminated with PCB is described. The design and operation of the equipment involved is discussed. The process concentrates the PCB extracted from soils and reclaims the solvents used. Final PCB concentrations of less than 2 ppm in the soil have been achieved. 1 figure, 1 table.

38873 (EPRI-CS/EA/EL—4480, pp 6.4-6.6) **Preventive measures for reduction of airborne PCB contamination risk.** West, B.W.; Hansen, W.G. (West & Hansen Engineers, Inc., Long Beach, CA). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

Installation of risk reduction measures can rapidly and inexpensively lower the probability of extensive airborne PCB contamination. Maximizing the cost-effectiveness of this approach requires a well-planned survey program, including on-site investigations. In recognition of the need to assist member utilities conducting airborne PCB spill risk reduction programs, EPRI sponsored development of a design manual addressing technical, economic, and environmental aspects of preventive engineering. The design manual is organized into four sections presented sequentially in the order of their occurrence in a risk reduction program. These are: Ranking PCB installations on the basis of their potential for widespread contamination; Selecting the most appropriate spill reduction approach; Determining design requirements; and Preparing design plans and specifications.

38874 (EPRI-CS/EA/EL—4480, pp 6.23-6.25) **Occupational exposure of electric utility personnel to PCBs: a case study.** Sahl, J.D.; Crocker, T.T.; Saperstein, M.D.; Faeder, E.J. (Southern California Edison Co., Rosemead). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

A research project was developed to determine the occupational exposure to PCBs of Southern California Edison Company personnel. Levels of PCB in blood were compared from several exposure categories, and the amount of PCB in electrical apparatus in the Edison system was measured. To establish a background blood PCB level for non-occupationally exposed individuals, blood samples from the pre-employment medical examinations of 738 new employees were analyzed for PCB. Blood PCB levels of 1058 current personnel have a median of 3 ppb with a mean of 4 (SD=4) ppb. There is no significant difference in blood PCB concentration between the pre-employment, current employment, and the subset of high exposure potential groups. There is no indication that a blood concentration at these levels poses a threat to human health. These data indicate that no significant occupational exposure to PCBs has occurred among personnel of this utility, and that no significant health impacts would be expected from PCBs.

38875 (EPRI-CS/EA/EL—4480, pp 7.1-7.6) **Measurement of PCDF and PCDD in utility equipment.** Gordon, S.H., Miller, M.; DeRoos, F.L.; Cooke, M.; Guertin, J.; Addis, G. (IIT Research Institute, Chicago, IL). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

At the temperatures that prevail in transformer fires, PCB may react to form PCDF and other toxic oxidation products. Information is sparse, however, on the distribution of PCDF and PCDD in PCB-containing insulation fluids used by the electric utility industry. The Electric Power Research Institute (EPRI) recently initiated a program to evaluate and develop compound-specific analytical procedures for characterizing PCDF and PCDD in PCB-containing insulation fluids. The EPRI-sponsored research has three basic goals: To improve the chemical analytical methods for individual compounds of PCDF and PCDD; to determine the concentration of PCDF and PCDD in utility equipment that has seen varied use; and to develop a screening test that determines PCDF and PCDD concentrations rapidly in order to reduce costs and time delays before undertaking cleanup activities after PCB fires. The chemical analytical methods used and some of the early results of these studies are summarized. 3 tables.

38876 (EPRI-CS/EA/EL—4480, pp 7.11-7.19) **Safety of non-PCB reclassified transformers in fire incidents a building scale engineering study.** Cooke, M.; DeRoos, F.L.; Rising, B.; Martin, W.H. (Battelle Memorial Institute, Columbus, OH). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

Battelle's Columbus Laboratories, under contract to Union Carbide, designed and built a pilot scale combustion apparatus which could simulate the conditions existing in an accidental building fire. The materials tested in this study duplicated the coolant from an askarel transformer which had been serviced with TF-1 to remove PCB and subsequently refilled with silicone. The results of the study revealed no measurable PCDD production and only traces of PCDF. It is apparent from these data that Arochlor 1260 produces the highest relative levels of PCDF which is expected due to the higher level of chlorination in Aroclor 1260 as versus 1254. Aroclor 1242 which has the lowest chlorine content also produces the lowest chlorine content also produces the lowest PCDF levels. In all cases the amounts of PCDF produced were below one ppb. 2 references, 4 tables.

38877 (EPRI-CS/EA/EL—4480, pp 7.22-7.23) **PCB accident in France.** Rappe, C.; Kjeller, L.O.; Marklund, S.; Nygren, M.; Fournie, R. (Univ. of Umea, Sweden). Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

In the evening of January 14, 1985, an explosion followed by a fire ruptured a transformer in the basement of a residential building in Reims, France. The dielectric fluid in the transformer consisted of a mixture of PCB (60%) and trichlorobenzene (TCB) (40%). Two days after the accident dielectric fluid collected near the transformer and soot samples were analyzed. PCDFs and TCDDs were not present. A series of PCDFs have been found in samples collected in other parts of the building. Variability in measured levels indicates the need for more accurate analytical procedures. 1 figure, 2 tables.

38878 **(EPRI-EA—4544) Geochemical behavior of chromium species.** Rai, D.; Zachara, J.M. (Pacific Northwest Labs., Richland, WA (USA)). May 1986. Contract AC06-76RL01830. 217p. NTIS, PC A10/MF A01 - Research Reports Center, Box 50490, Palo Alto, CA 94303; GPO Dep. File Number DE86011642.

The reactions studied were: (1) the hydrolysis constants for Cr(III) and the solubilities of $Cr(OH)_3(s)$ and Cr/sub x/Fe/sub 1-x/$(OH)_3(ss)$, (2) the oxidation of aqueous Cr(III) to Cr(VI) by manganese dioxide, and (3) the adsorption of aqueous Cr(VI) by iron oxides. Based on the solubility of $Cr(OH)_3$ as a function of pH, hydrolysis constants were determined for the formation of $CrOH^{2+}$, $Cr(OH)_3^0$, and $Cr(OH)_4^-$, which are dominant aqueous species in different pH regions. The solubilities of $Cr(OH)_3$ and Cr/sub x/Fe/sub 1-x/$(OH)_3$ from both the oversaturation and undersaturation directions show that the equilibrium is reached in <67 days and that the kinetics of precipitation/dissolution of these solids is relatively fast. Because $Cr(OH)_3$ and Cr/sub x/Fe/sub 1-x/$(OH)_3$ precipitate rapidly, have low solubilities, and can form under geologic conditions, their solubilities can be used to set upper limits on Cr(III) concentrations in geologic systems. Manganese dioxide oxidized aqueous Cr(III) to Cr(VI) in a pH range of 3.0 to 10.3. The rates of Cr(III) oxidation in acidic solutions (pH 3.0 to 4.7) are relatively more rapid and are primarily dependent on the MnO_2 surface area and the ratio of Cr(III) to Cr(VI) in solution. Mechanistic constants were developed for the adsorption of CrO_4^{2-}, $H_2CO_3^0/HCO_3^-/CO_3^{2-}$, SO_4^{2-}, and Ca^{2+} on amorphous and crystalline iron oxides.

38879 **(EPRI-EA—4607) Remote sensing to detect ecological impacts associated with acid deposition. Final report.** Van Voris, P.; Wukelic, G.E. (Pacific Northwest Labs., Richland, WA (USA)). May 1986. Contract AC06-76RL01830. 67p. NTIS, PC A04/MF A01; 1 - Research Reports Center, Box 50490, Palo Alto, CA 94303; GPO Dep. File Number DE86011649.

A planning study was conducted to determine the potential applications of remote sensing for detecting ecological impacts that have been reportedly caused by acid deposition. The project was divided into two phases: a technology assessment phase (Phase I) and a prototype demonstration (Phase II). The emphasis of the project was on detecting ecological change, not on determining the cause of that change. The latter is the role of ground-based research. Phase I consisted of an assessment of terrestrial and aquatic components that are indicative of sensitivity to acid deposition. The assessment identified remote sensing as the optimal cost-effective method for measuring the rate of change of land use, crop type, and forest canopy health over large geographic areas. In Phase II, spectral reflectance in the near-infrared region of the spectrum from forest canopies of Camel's Hump State Forest from two Landsat scenes from the summers of 1976 and 1983 were compared. Significant increases in spectral reflectance from the forest were detected when the pixels were compared, and it is hypothesized that this increase is indicative of a decline in forest growth and canopy closure. However, because of project limitations, no ground-truth data were collected by Battelle-Northwest scientists to verify the findings of the remote sensing analyses. A comprehensive research program is recommended to further investigate the use of remote sensing to detect ecological damage and its relationship to possible causative agents. Future research should also focus on the use of remote sensing for identifying ecosystems that may be sensitive to perturbations like acid deposition and improving our ability to model ecological processes. Priority should be given to detecting, monitoring, and modeling changes in forested watersheds.

38880 **Quinoline sorption to subsurface materials: role of pH and retention of the organic cation.** Zachara, J.M.; Ainsworth, C.C.; Felice, L.J.; Resch, C.T. (Pacific Northwest Lab., Richland, WA). *Environmental Science and Technology;* 20: No. 6, 620-627(Jun 1986). Contract AC06-76RL01830.

The sorption of quinoline (pK/sub a/ = 4.94) was investigated on low-organic-carbon subsurface materials that varied in pH. Sorption isotherms were measured from 10^{-7} to 10^{-4} M quinoline and were found to be nonlinear. The resulting Freundlich constant (K/sub F/), based on total aqueous quinoline concentration, were poorly correlated with subsoil properties, including organic carbon. Higher sorption in the acidic subsoils and favorable coefficients for regression of K/sub F/, normalized to cation-exchange capacity vs. the ionization fraction (Q), point to the importance of ion exchange of the protonated compound. When the subsoil pH is adjusted, it is shown that sorption parallels the ionization fraction and retention of the organic cation far exceeds that of the neutral species. Calculations of surface speciation and thermodynamic parameters of sorption (ΔH°, ΔS°) point to ion exchange and/or surface protonation at pH, levels exceeding pK/sub a/ by greater than 2 log units. It is suggested that in subsurface materials of low carbon content,

quinoline sorption is controlled by pH the nature and capacity of the exchange complex, and groundwater ion composition. 46 references, 5 figures, 4 tables.

38881 (INIS-mf—9887) Investigations of gas/water interactions in unsaturated soil using CO_2 and ^{222}Rn measurements. Doerr, H. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1984. 99p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE86752080.

Using the example of the unsaturated soil and groundwater around the Sandhausen measuring point, the interdependence between the isotope composition of the different components in the various ground reservoirs was illustrated. The measured values are compatible with model calculations of carbon and carbon isotope transport and exchange in the unsaturated soil; this suggests that the model assumptions may be applicable to other sites. (orig./HP).

38882 (UCID—20267) Rancho Seco liquid effluent pathway aquatic and terrestrial dietary survey report. Eagle, R.J.; Wong, K.M.; Noshkin, V.E. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1984. Contract W-7405-ENG-48. 40p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86011010.

This report is a detailed summary of a survey conducted to identify all environmental pathways that may lead to any potential radiological dose to individuals utilizing aquatic and terrestrial components possibly contaminated with radionuclides contained in the liquid effluents that have been routinely discharged since 1980 to Clay Creek from the Rancho Seco Nuclear Generating Station. All land users and identified residents who obtain food from the creeks or use the creek water for irrigation or recreation were interviewed. Site specific usage parameters for the consumption of different food products and for direct exposure to individuals at downstream locations were identified and are discussed in this report. These usage parameters will be used with appropriate radionuclide concentration data to estimate radiological dose to man from the identified liquid effluent pathways.

38883 Environmental applications for an intrinsic germanium well detector. Stegnar, P.; Eldridge, J.S.; Teasley, N.A.; Oakes, T.W. (Oak Ridge National Lab., Oak Ridge, TN 37831). pp 313-318 of Analytical spectroscopy. Lyon, W.S. New York, NY; Elsevier (1984). (CONF-831025—).

From 26. ORNL-DOE conference on analytical chemistry in energy technology; Knoxville, TN, USA (11 Oct 1983).

The overall performance of an intrinsic germanium well detector for ^{125}I measurements was investigated in a program of environmental surveillance. Concentrations of ^{129}I and ^{131}I were determined in thyroids of road-killed deer showing the highest activities of ^{125}I in the animals from the near vicinity of Oak Ridge National Laboratory. This demonstrates the utility of road-killed deer as a bioindicator for radioiodine around nuclear facilities.

38884 (ANL/CNSV-TM—171) Study to develop a predicative technique for the estimation of collectible solid waste in the United States. (Franklin Associates Ltd., Prairie Village, KS (USA)). Jan 1985. Contract W-31-109-ENG-38. 138p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE86012218.

This study gathers wastes generation rate data from several cities throughout the United States to test the reliability of the estimating equations developed in the 1979 study. Other parameters specifically seasonality, temperature, and precipitation, are examined to determine if they have a predictable effect on waste generation rate. Only municipal solid waste generation rates are examined in this study. Municipal waste includes all residential and commercial solid waste, but excludes industrial waste.

38885 (PB—86-190030/XAB) Surface-mine reclamation at the Elkins Mine Drainage Demonstration Project after 17 years. Hill, R.D.; Grube, W.E. (Environmental Protection Agency, Cincinnati, OH (USA). Hazardous Waste Engineering Research Lab.). Apr 1986. 9p. (EPA/600/D—86/081). NTIS, PC A02/MF A01.

In 1968 approximately 640 acres of land disturbed by coal mining were reclaimed and revegetated. The revegetation approach included the use of lime and fertilizer followed by seeding with a grass/legume mixture. In the steeper areas, pine trees were also planted. In areas designated for forest planting, a mixture of pines and deciduous trees was utilized. The revegetated areas were evaluated in 1971, 1973, 1976, 1984, and 1985. This paper discusses the results of the latter two evaluations.

38886 (PNL—5817) Environmental monitoring at Hanford for 1985. Price, K.R. (Pacific Northwest Labs., Richland, WA (USA)). May 1986. Contract AC06-76RL01830. 216p. NTIS, PC A10/MF A01; 1; GPO Dep. File Number DE86012295.

Environmental monitoring activities performed by the Pacific Northwest Laboratory for the Department of Energy on the Hanford Site for 1985 are discussed in this report. Samples of environmental media were collected to estimate radionuclide and chemical concentrations in the Hanford environment. Radiological impacts during 1985 in terms of radiation dose equivalents as a result of Hanford operations are also discussed. Applicable standards and concentration guides are given in Appendix C. As an aid to the reader, a glossary and conversion tables are given in Appendix B. The results provided in this report are summarized.

This bibliography presents citations to the majority of published materials on white sturgeon (Acipenser transmontanus). The purpose was to assist in planning and implementing research on white sturgeon in the Columbia River system. (ACR)

38888 (PNL-SA—13861) Generalization of one-dimensional solute transport. A stochastic-convective flow conceptualization. Simmons, C.S. (Pacific Northwest Labs., Richland, WA (USA)). Apr 1986. Contract AC06-76RL01830. 14p. (CONF-8604214—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86011117.

From 6. annual AGU front range branch hydrology days; Fort Collins, CO, USA (16 Apr 1986).

A stochastic-convective representation of one-dimensional solute transport is derived. It is shown to conceptually encompass solutions of the conventional convection-dispersion equation. This stochastic approach, however, does not rely on the assumption that dispersive flux satisfies Fick's diffusion law. Observable values of solute concentration and flux, which together satisfy a conservation

equation, are expressed as expectations over a flow velocity ensemble, representing the inherent random processess that govern dispersion. Solute concentration is determined by a Lagrangian pdf for random spatial displacements, while flux is determined by an equivalent Eulerian pdf for random travel times. A condition for such equivalence is derived for steady nonuniform flow, and it is proven that both Lagrangian and Eulerian pdfs are required to account for specified initial and boundary conditions on a global scale. Furthermore, simplified modeling of transport is justified by proving that an ensemble of effectively constant velocities always exists that constitutes an equivalent representation. An example of how a two-dimensional transport problems can be reduced to a single-dimensional stochastic viewpoint is also presented to further clarify concepts.

38889 **Biomass of freshwater turtles: a geographic comparison.** Congdon, J.D.; Greene, J.L.; Gibbons, J.W. (Savannah River Ecology Lab., Aiken, SC). *American Midland Naturalist;* **115**: No. 1, 165-173(Jan 1986).

From American industrial hygiene conference; Dallas, TX, USA (18-23 May 1986).

Standing crop biomass of freshwater turtles and minimum annual biomass of egg production were calculated for marsh and farm pond habitats in South Caroling and in Michigan. The species in South Carolina included Chelydra serpentina, Deirochelys reticularia, Kinosternon subrubrum, Pseudemys floridana, P. scripta and Sternotherus odoratus. The species in Michigan were Chelydra serpentina, Chrysemys picta and Emydoidea blandingi. Biomass was also determined for a single species population of P. scripta on a barrier island near Charleston, South Carolina. Population density and biomass of Pseudemys scripta in Green Pond on Capers Island were higher than densities and biomass of the entire six-species community studied on the mainland. In both the farm pond and marsh habitat in South Carolina P. scripta was the numerically dominant species and had the highest biomass. In Michigan, Chrysemys picta was the numerically dominant species; however, the biomass of Chelydra serpentina was higher. The three-species community in Michigan in two marshes (58 kg ha^{-1} and 46 kg ha^{-1}) and farm ponds (23 kg ha^{-1}) had lower biomasses than did the six-species community in a South Carolina marsh (73 kg^{-1}). Minimum annual egg production by all species in South Carolina averaged 1.93 kg ha^{-1} and in Michigan averaged 2.89 kg ha^{-1} of marsh.

38890 **(AD-A—165685/9/XAB) Bioaccumulation of toxins from dredged materials from the port of Hampton Roads, Virginia. Final report for period ending November 1984.** Alden, R.W.; Hall, G.J.; Jackman, S.S. (Old Dominion Univ., Norfolk, VA (USA). Applied Marine Research Lab.). Jan 1985. 78p. NTIS, PC A05/MF A01.

Exposure of test organisms to sediments taken from the highly industrialized portion of the Southern Branch produced statistically significant accumulation of chlorinated hydrocarbons, polynuclear aromatic hydrocarbons, and heavy metals. No PCBs were detected in the test organisms. Conclusion: Lower Southern Branch sediments are not acceptable for ocean disposal.

38891 **(AD-A—165870/7/XAB) Installation Restoration Program, Phase 2 - Confirmation/Quantification Stage i, Moody Air Force Base, Georgia. Final technical report, January 1984-December 1985.** Steinberg, J.A.; Thiess, W.G. (Water and Air Research, Inc., Gainesville, FL (USA)). Dec 1985. 252p. NTIS, PC A12/MF A01.

The Phase II Stage 1 Installation Restoration Program Confirmation/Quantification Survey for Moody Air Force Base investigated three suspected hazardous waste disposal sites. These included a former landfill site; a construction rubble fill site; and a petroleum, oil, and lubricants (POL) storage area. In addition, testing of all existing water supply (potable and industrial) wells was conducted. Shallow groundwater monitoring wells were installed at two of the sites. Shallow pits were excavated at the POL site. Shallow groundwater from monitor wells and pits, deeper groundwater from existing wells, and surface water were sampled. Most of these analyses were screening tests (pH, specific conductance, dissolved organic carbon (DOC), total organic halogens (TOX), total phenolics, and oil and grease), which are nonspecific indicators of contamination. Samples near waste sites were analyzed for specific constituents (cadmium chromium, iron, nickel, lead, zinc, dichlorodiphenyltrichloroethane (DDT), and purgeable organics) where prior information indicated they may be present. Samples from base supply wells were tested for selected nonspecific and specific constituents.

38892 **(CONF-860426—3) Some new cost-effective approaches for measuring organics associated with hazardous wastes.** Gammage, R.B.; Matthews, T.G.; Vo-Dinh, T. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86011499.

From Symposium on measurement of toxic air pollutants; Raleigh, NC, USA (27 Apr 1986).

A number of newer and often highly sensitive analytical techniques and field monitoring devices are described that have potential suitability for monitoring organic hazardous wastes. The focus is on devices and methods that are cost-effective and permit either direct measurements in the field or screening-type measurements on samples returned to the laboratory for analysis. Most of these methods are directed at categories of less volatile organic compounds. The results of some very preliminary field tests are given. Most promising were the results obtained for a wide variety of ground and surface waters screened spectroscopically using synchronous fluorescence.

38893 **(CONF-8605137—1) Integrated fates and effects model for estimation of risk in aquatic systems.** Bartell, S.M. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86011493.

From 10. symposium on aquatic toxicology and hazard assessment; New Orleans, LA, USA (4 May 1986).

An integrated fates and effects model was derived to simulate the toxic effects of naphthalene exposure on the growth of auatic populations. Effects on production were calculated on the basis of dose-response functions specific to each population in relation to changing concentrations of accumulated naphthalene. Separate simulations using constant environmental loading rates of 0.0001, 0.001, 0.01, and 0.10 g m^{-2} d^{-1} revealed changes in production that could not be extrapolated directly from acute toxicity bioassays. Estimted risks of 50% reduction in fish production ranged from 0.08 to 0.65 for loading rates of 0.000025 to 0.10 g m^{-2} d^{-1}. Examination of naphthalene flux through the model system indicated that the combined effects of photolysis and volatilization were more important than biological processes in determining the fate of naphthalene for the 0.10 loading rate. The relative importance of physicochemical versus biological processes reversed for the 0.0001 loading rate. At intermediate loading rates, the relative importance of these processes varied seasonally.

38894 **(CONF-8605137—2) Effect of dissolved organic macromolecules on exposure of aquatic organisms to organic contaminants.** McCarthy, J.F.; Black, M.C. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 33p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86011765.

From 10. symposium on aquatic toxicology and hazard assessment; New Orleans, LA, USA (4 May 1986).

Hydrophobic organic contaminants in aquatic systems bind to sediments or to suspended particles, and these associations affect the transport and bioavailability of contaminants and thus alter the exposure received by biota. We present evidence demonstrating the importance of another less obvious natural sorbent - dissolved organic macromolecules (DOM), such as dissolved humic materials - in altering the environmental fate of contaminants. Binding of a polyaromatic hydrocarbon, benzo[a]pyrene, to DOM and to particles was measured for each sorbent and in a mixed system containing both sorbents. DOM competed with particles for binding of the dissolved contaminant and reduced the amount bound to particles. Binding to each sorbent was independent and noninteractive. Based

on these results, equations were developed to indicate those environments and ecosystems for which failure to account for the role of DOM as a sorbent would result in 50 or 90% errors in steady state predictions about the exposure of aquatic organisms to contaminants.

38895 **(DPST—84-791) Pilot-scale reverse osmosis testing for the F and H Area Effluent Treatment Facility.** Kessler, J.L. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.). 27 Sep 1984. Contract AC09-76SR00001. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86011836.

Pilot-scale reverse osmosis (RO) tests were completed with a 10 gpm unit to demonstrate the performance of RO in the F and H Area Effluent Treatment Facility (F/H ETF). RO will be used in the WMETF to remove soluble salts and soluble radioactivity. The advantage of using RO (over ion exchange) is that it is nondescriminanting and removes virtually all dissolved solids species, regardless of ionic charge. RO also generates less than half the waste volume produced by ion exchange. Test results using a 200-Area nonradioactive effluent simulant demonstrated salt rejections of 98% and water recoveries of 94% by using recycle on a single stage pilot unit. For a full-scale, multi-staged unit overall salt rejections will be 95% (DF = 20) while obtaining a 94% water recovery (94% discharge, 6% concentrated waste stream). Identical performance is expected on actual radioactive streams, based on shielded cells testing performed by Motyka and Stimson. Similarly, if the WMETF RO system is configured in the same manner as the SRL ECWPF, a DF of 20 and a water recvery of 94% should be obtained.

38896 **(GKSS—86/E/2) Formation of particulate suspended matter and its influence on bounding and distribution of ecotoxic heavy metals in the tidal influenced Elbe river.** Irmer, U.; Knauth, H.D.; Weiler, K. (GKSS-Forschungszentrum Geesthacht G.m.b.H., Geesthacht-Tesperhude (Germany, F.R.)). 1985. 26p. (In German). NTIS, PC E02; Available from NTIS as TIB/B86-06434.

The chlorophyll a content of water samples correlated well with the contents of SPM, organic substance. These strong correlations suggested a significantly influenced SPM formation by growth of algae. Negative correlations between phytoplankton dynamic and Hg-, Pb- and Cd-content of SPM showed corresponding minima of metals at time of maximal algal bloom. The results suggest that in summer time a considerable 'dilution' of highly polluted SPM transported by the upper water occurred, caused by the observed mass-enrichment of phytoplankton found in shallow water regions of the tidal influenced Elbe river. Such induced decrease of Hg-, Pb- and Cd-content of seston was additionally intensified by an increased sedimentation of autochthonous SPM in still water areas of the widely branched Port of Hamburg. Comparing the annual distribution average of metals between solution and particulates lead proved to be the most sestonbound metal (89%), in sequence followed by iron (85%), cadmium (79%), copper (74%), mercury (68%) and in distinct distance manganese (16%). (orig./PW).

38897 **(INIS-mf—9881) Trace element analysis of the heavy metals lead, cadmium and thallium in water and samples of organic matter using mass spectroscopy and isotope dilution analysis.** Trettenbach, J. (Regensburg Univ. (Germany, F.R.). Naturwissenschaftliche Fakultaet 4 - Chemie und Pharmazie). 26 Nov 1984. 185p. (In German). NTIS (US Sales Only), PC A09/MF A01. File Number DE86752087.

A multielement analysis technique was on the basis of accurate isotope measurements. The accuracy of the measurements was tested using an isotope standard. Water, plants, foodstuffs, and blood were analyzed. The organic samples were decomposed using nitric acid and hydrogen peroxide, and the metals were deposited by electrolysis on a platinum electrode and extracted. The detection limit of the technique was in the pg range. (PW).

38898 **(ORNL—6179) Water quality criteria for nitrocellulose. Final report.** Ryon, M.G. (Oak Ridge National Lab., TN (USA)). Jun 1986. Contract AC05-84OR21400. 82p. NTIS, PC A05/MF A01; GPO Dep. File Number DE86012039.

Based on available data for four species of mcroinvertebrates, four species of fish, and three species of algae, nitrocellulose does not appear to be very toxic for most aquatic species. In the majority of evaluations the EC_{50} and LC_{50} values were >1000 mg/L. Only for the effect on the chlorophyll a content of Selenastrum caprecornutum was a lower value estimated, an EC_{50} of 579 mg/L (Bentley et al. 1977). The available data on the human health effects and mammalian toxicity of nitrocellulose generally suggest that it is virtually nontoxic. The acute toxicity data indicated LD_{50} values in excess of 5000 mg/kg. However, nitrocellulose does appear to produce significant abiotic environmental effects when released from Army Ammunition Plants. Because of its fibrous nature, nitrocellulose would tend to blanket benthic habitats (perhaps depriving organisms of oxygen) and fill in interstitial spaces used as cover for benthic invertebrates and substrates for periphyton. This potential for habitat alteraction is further compounded by the apparent resistance of released nitrocellulose to environmental degradation. When contrasted to the low toxicity of the compound, this habitat alteration becomes a significant aspect of regulatory control.

38899 **(PB—86-184421/XAB) Validity of effluent and ambient toxicity tests for predicting biological impact, Skeleton Creek, Enid, Oklahoma.** Norberg-King, T.J.; Mount, D.I. (Environmental Protection Agency, Duluth, MN (USA). Environmental Research Lab.). Mar 1986. 35p. NTIS, PC A03/MF A01.

Skeleton Creek was studied in August, 1983 and was the fourth site study. A small creek, Boggy Creek receives discharges from both an oil refinery and a publicly owned treatment works (POTW) prior to its confluence with Skeleton Creek. A fertilizer-processing-plant discharge is located on Skeleton Creek just downstream of the confluence of the two streams. The toxicity of two effluents and ambient stream stations was evaluated. Hydrological and ecological field surveys were also done. A comparison of the relationship between the measured toxicity of the water samples collected from the streams and the health of the aquatic community at the same stream stations is made.

38900 **(PB—86-184744/XAB) Control of organic substances in water and waste water.** Berger, B.B. (Massachusetts Univ., Amherst (USA). Dept. of Civil Engineering). Apr 1983. 482p. NTIS, PC A21/MF A01.

The presence of organic substances of industrial origin in waste waters, storm runoff, and in surface and groundwaters may not always be an unmitigated evil--but, it is safe to say, it never is good. In 1976, EPA was required to give special emphasis to 129 priority pollutants that present probable hazard in the water resource. Of these 129 priority pollutants, 114 are organic. This document is comprised of 14 chapters, each prepared by a specialist. Chapter 1, Fundamental Considerations in the Removal of Organic Substances in Water is, in esence, an examination of a wide spectrum of physical-chemical principles that are being used, are under study, or may in the future be adapted for use in the separation of organic pollutants in waters.

38901 **(PB—86-191046/XAB) Study of biological processes on the US Mid-Atlantic slope and rise. Second interim report. Report for May 1984-September 1985.** Maciolek, N.; Grassle, J.F.; Boehm, P.D.; Dade, B.; Brown, B. (Battelle New England Marine Research Lab., Duxbury, MA (USA)). 24 Feb 1986. 187p. NTIS, PC A09/MF A01.

Samples collected on the first four of six cruises to the U.S. Mid-Atlantic as part of a study to evaluate potential effects of drilling have been analyzed for benthic infauna, hydrocarbons, sediment grain size, and total organic carbon, hydrogen, and nitrogen. There is no evidence that the hydrocarbons in the sediments originate from sources associated with drilling activities. A very subtle change in the fauna at the drill site station in Block 372 was detected. Species diversity declined at Station 1 over time, but this trend is not statistically significant. The density of at least one dominant species was significantly lower in post-drilling samples compared to pre-drilling samples, but the density of the species was not significantly different at Station 1 compared to the majority of 2100 m stations for any sampling period.

38902 **(PNL-SA—12297) Temporal trends of contamination of Puget Sound.** Crecelius, E.A.; Bloom, N. (Pacific Northwest Labs., Richland, WA (USA)). Oct 1984. Contract AC06-76RL01830. 27p. (CONF-8409222—2). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86011608.

From 5. international ocean disposal symposium; Corvallis, OR, USA (10 Sep 1984).

Trends in contaminant loading to the central basin of Puget Sound have been inferred from the chemical composition of age-dated sediment cores. During the last hundred years there have been dramatic changes in the quantity of specific heavy metals and organic compounds entering Puget Sound. The sedimentary history of several chemicals, including Pb, Hg, Ag, Cu, As and hydrocarbons, shows increased concentrations paralleling the urbanization of the Seattle-Tacoma area. Contaminant concentrations began to increase above background in the late 1800s and reached maximum concentrations usually in sediments deposited in 1945 to 1965. Synthetic organics such as PCB, DDT and CBD first appear in sediments deposited in the 1930s or later and reached a maximum in the 1960s. The presence of the subsurface maximum concentrations in the fine-grain deepwater sediments indicates the pollution control strategies have significantly improved the sediment quality of central Puget Sound.

38903 **(SNV—3042) Mercury. Occurrence and turnover of mercury in the environment. Status report October 1985.** Lindqvist, O.; Johansson, K.; Timm, B.; Levander, T.; Hovsenius, G. (National Swedish Environmental Protection Board, Solna). Oct 1985. 34p. (In Swedish). NTIS (US Sales Only), PC A03/MF A01. File Number DE86752156.

The National Swedish Environmental Protection Board and some industry branches have started up research work concerning mercury in the environment. During the period 1984/1985-1988/1989 the following fields will be studied: 1 Swedish emissions of mercury into the atmosphere. 2. Mercury in the air. Sources, transport and deposition. 3. Occurrence and turnover of mercury in terrestrial ecosystems. 4. Occurrence and turnover of mercury in aquatic ecosystems. The first year has mainly been used for planning and initiation of work. Research work concerning development of analysis and sampling methods. Already ongoing investigations concerning mercury in air and precipitation is continuing. Mapping of mercury in soil and water has been started. This report summarizes current research and results.

38904 **(SVF—195) Operation experiences with polyamine dosing to condition feed water, boiler water and condensate.** Persson, F. (Stiftelsen foer Vaermeteknisk Forskning, Stockholm (Sweden)). Jan 1985. 149p. (In Swedish). NTIS (US Sales Only), PC A07/MF A01. File Number DE86752148.

Experiences from 25 plants has been collected with the following results. 1. The content of iron in condensate and feed water has decreased in most plants after start of polyamine dosing, which proves that the general corrosion in boilers and pipelines has decreased. 2. In one plant there is no deaeration of the feed water. The content of iron has in this plant been higher when dosing of polyamine than with earlier dosing of tannin products. 3. Corrosion has occurred in the feed water tank in a plant. The operation in this plant is intermittent. The dosing of polyamine was started 1982. The feed water tank was so corroded 1983 that it had to be replaced. The new tank was inspected after 6 months operation. Pittings were discovered at the water level. 4. Greasy deposits have been formed in many plants in condensate and feed water systems with operation disturbances in strainers, steam traps and condensate filters. 5. To avoid greasy deposits, recommended dosing quantities has been decreased to such low levels that in many cases no content of amine has been measured in condensate and feed water. 6. The surface of the waterside in the boilers has in many cases been red or has a red tone. The red colour is caused by hematite formation. 7. In four plants leakage has occurred in boilers which has been operated for several years with conventional chemicals. Leakages have occurred in welds and at rolled in tubes within a year after start of polyamine dosing. 8. The cost for dosing with polyamine is in general higher than for dosing with conventional chemicals as phosphate, hydrazine and amine for alkalization of condensate. The results from test runs with polyamine products in two district heating plants are included in the report. The content of carbon dioxide in the steam is high and heat exchangers for steam were badly corroded. Polyamine dosing could not decrease the corrosion.

38905 **Detecting chloroorganics in groundwater.** Milanovich, F.P. (Lawrence Livermore National Lab., CA). *Environmental Science and Technology;* **20**: No. 5, 441-442(May 1986).

Optical fibers, chemistry, lasers, and fluorescence spectroscopy have been combined to form remote fiber fluorimetry (RFF). The key to RFF is the use of fiber-optic chemical sensors (FOCSs). The RFF system has been used to measure volatile chloroorganics in groundwater and the vadose zone. This new technology provides an analytical capability where traditional systems have not been practical or feasible. FOCSs were tested in Henderson, Nevada, in wells that were known to contain chloroform. Backup analysis provided an independent reference for the in-situ measurements. 2 references, 3 figures.

38906 **Supercritical fluid processing.** Eckert, C.A.; Van Alsten, J.G.; Stoicos, T. (Univ. of Illinois, Urbana). *Environmental Science and Technology;* **20**: No. 4, 319-325(Apr 1986). Contract FG22-84PC70801.

Separation and detoxification reactions often can be run advantageously using supercritical fluids (SCFs) as processing media. The use of a supercritical solvent frequently permits extraction of very dilute toxic species, either directly or in a two-step process. SCF solvents not only increase reactivity but offer the potential for simultaneous separation and detoxification. SCF technology is a powerful tool that has a bright future in environmental engineering applications.

38907 **Interactions between polycyclic aromatic hydrocarbons and dissolved humic material: binding and dissociation.** McCarthy, J.F.; Jimenez, B.D. (Oak Ridge National Lab., TN). *Environmental Science and Technology;* **19**: No. 1, 1072-1076(Nov 1985).

Binding of polycyclic aromatic hydrocarbons (PAH's) to dissolved humic material (DHM) was examined by using equilibrium dialysis and fluorescence techniques. There was a direct relationship between the hydrophobicity of the PAH and the affinity for binding to DHM. The binding affinity P/sub a/ for benzo[a]pyrene (BaP), benzanthracene, and anthracene decreased slightly as the concentration of DHM increased. The binding of BaP to DHM was completely reversible and the extent of reversibility was unrelated to the sorption time. The rate of binding of BaP to DHM, measured by the quenching to BaP fluorescence, was very rapid and was completed within 5-10 min. The results suggest that the presence of DHM, or other sorptive components of the dissolved organic pool, may affect binding to sediment or suspended particles and thus alter the fate and transport of organic contaminants in aquatic systems.

5203 Radioactive Materials Monitoring And Transport

REFER ALSO TO CITATION(S) 37537, 37538, 37539, 37549, 37556, 37558, 37560, 37590, 37591, 37594, 37632, 37633, 37634, 37639, 37642, 37645, 37659, 37660, 38855, 38882

38908 **(PNL-SA—13539) Sediment and contaminant transport in a marine environment.** Onishi, Y.; Thompson, F.L. (Pacific Northwest Labs., Richland, WA (USA)). Jan 1986. Contract AC06-76RL01830. 10p. (CONF-8603129—1). NTIS, PC A02/MF A01 - GPO. File Number TI86011135.

From 3. international symposium on river sedimentation; Jackson, MS, USA (31 Mar 1986).

The finite-element model FETRA is an unsteady, verically averaged two-dimensional model to simulate the transport of sediment and contaminants (radionuclides, heavy metals, pesticides, etc.) in coastal and estuarine water. The model, together with the hydrodynamic model CAFE-I, was applied to the Irish Sea to predict the migration and accumulation of sediment (both cohesive and noncohesive) and of a radionuclide (dissolved and sediment-sorbed) in a tide- and wind-driven system. The study demonstrated that

FETRA is a useful tool for assessing sediment and toxic contaminant transport in a marine environment.

38909 **(UCID—20367) Environmental radiological studies downstream from Rancho Seco Nuclear Power Generating Station.** Noshkin, V.E.; Wong, K.M.; Eagle, R.J.; Dawson, J.W.; Brunk, J.L.; Jokela, T.A. (Lawrence Livermore National Lab., CA (USA)). 22 Mar 1985. Contract W-7405-ENG-48. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86011019.

This report summarizes the information compiled in 1984 while assessing the environmental impact of radionuclides in aquatic releases from the Rancho Seco Nuclear Power Generating Station. Gamma-emitting radionuclides discharged since 1981 are found in many of the dietary components derived from the creeks receiving the effluent wastewater. Some soils and crops are found to contain radionuclides that originate from the contaminated water that was transferred to land during the irrigation season. ^{134}Cs and ^{137}Cs are the primary gamma-emitting radionuclides detected in the edible flesh of fish from the creeks. Concentrations in the flesh of fish decreased exponentially with distance from the plant. No significant differences in the ^{137}Cs activity were found between male and female fish of equal size, but concentrations may vary in fish of different size, with the season and diet. 21% of the total ^{137}Cs and ^{134}Cs discharged between 1981 and 1984 is associated with the creek sediments to a distance of 27 km from the plant. Fractions of the missing inventory have been transferred to land during the irrigation season or to downstream regions more distant than 27 km from the plant. The radiocesium content of the sediments in 1984 decreased significantly in a downstream direction, much in the same manner as concentrations decreased in fish. Radioactivity originating from the plant was not above detection limits in any terrestrial food item sampled beyond 6.5 km from the plant. Based on the usage factors provided by individuals interviewed in a 1984 survey, the fish and aquatic-organism ingestion pathway contributed the largest radiological dose to humans utilizing products contaminated with the radionuclides in the liquid wastes discharged from the Rancho Seco Nuclear Power Generating Station in 1984.

38910 **(UCID—20641-Pt.1) Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station, 1985.** Noshkin, V.E.; Wong, K.M.; Eagle, R.J.; Brunk, J.L.; Jokela, T.A. (Lawrence Livermore National Lab., CA (USA)). 6 Feb 1986. Contract W-7405-ENG-48. 43p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86011014.

Information compiled in 1985 while assessing the environmental impact of radionuclides previously discharged with aqueous releases from the Rancho Seco Nuclear Power Generating Plant is presented. In October 1984, the quantities of gamma-emitting radionuclides in water discharged to Clay Creek from the plant were reduced below operationally defined detection limits for liquid effluents. However, radionuclides previously discharged persist in the downstream environment and are found in many aquatic dietary components. ^{134}Cs and ^{137}Cs are the primary gamma-emitting radionuclides detected in the edible flesh of different fish, crayfish, and frogs. Coefficients for exponential equations are generated, from a least square analysis, that relate the change in concentration of ^{137}Cs in fish to distance downstream and time between March and October 1985. Concentrations of ^{137}Cs in surface creek sediments also decreased in the downstream direction much in the same manner as concentrations decreased in fish. However, there was no significant difference in the radiocesium concentrations in surface sediements collected from comparable locations during both 1984 and 1985.

38911 **(UCID—20641-Pt.2) Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station - 1985. Appendices. Part II.** Noshkin, V.E.; Wong, K.M.; Eagle, R.J.; Brunk, J.L.; Jokela, T.A. (Lawrence Livermore National Lab., CA (USA)). 23 Jan 1986. Contract W-7405-ENG-48. 91p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86012604.

Eight appendices address the following concentrations of radionuclides: in fish; in frog legs; in crayfish; in sediments; in soil samples; in surface and ground water samples; in water hyacinths; and in beef samples.

38912 **Pu(V) as the stable form of oxidized plutonium in natural waters.** Orlandini, K.A.; Penrose, W.R.; Nelson, D.M. (Argonne National Lab., IL, USA). *Marine Chemistry (Amsterdam);* **18**: No. 1, 49-57(Feb 1986).

This work presents analytical evidence supporting the proposition that Pu(V) is the sole or predominant form of oxidized plutonium in natural waters. Two independent methods, the selective adsorption of Pu(VI) by silica gel, and the somewhat less selective coprecipitation of Pu(V) with calcium carbonate, were developed to separate Pu(V) from Pu(VI). Measurements of ambient plutonium in several natural waters by these methods found only Pu(V). In laboratory tracer studies, Pu(VI) was shown to be highly unstable in dilute bicarbonate solution and in Lake Michigan water, reducing in first-order fashion to Pu(V). 11 refs.; 2 figs.; 2 tabs.

38913 **Uranium isotope distribution in ground water at the Shiprock Mill site.** Price, J.B.; Rice, G. (Sergent, Hauskins, and Beckwith, Albuquerque, NM). pp 189-198 of Management of uranium mill tailings, low-level waste, and hazardous waste. Fort Collins, CO; Colorado State University (1985). (CONF-850242—). Contract AC04-82AL14086.

From 7. symposium on management of uranium mill tailings, low-level waste and hazardous waste; Ft. Collins, CO, USA (6 Feb 1985).

Uranium is the most mobile of the radioactive elements which are found in ground water at the Uranium Mill Tailings Remedial Action (UMTRA) Project former milling sites. In most natural ground waters there is an approximately equal distribution between the radioactivity of the ^{234}U and ^{238}U isotopes of uranium. The milling process and the decay chain of uranium can increase or decrease the ratio of $^{234}U/^{238}U$ in ground water near milling sites. The areal distribution of $^{234}/^{238}U$ in aqueous form is examined for the Shiprock, New Mexico tailings as a possible tool for characterizing ground water.

38914 **Evaluating geomorphic hazards from river behavior -- Durango, Riverton, and Gunnison UMTRA Project sites.** Gillam, M.L.; Weeks, R.E. (Sergent, Hauskins and Beckwith Engineers). pp 143-152 of Management of uranium mill tailings, low-level waste, and hazardous waste. Fort Collins, CO; Colorado State University (1985). (CONF-850242—). Contract AC04-82AL14086.

From 7. symposium on management of uranium mill tailings, low-level waste and hazardous waste; Ft. Collins, CO, USA (6 Feb 1985).

The geomorphic settings of three UMTRA Project sites and methods used to evaluate associated fluvial hazards are reviewed. The results of these studies, and a comparison with separate analyses of the probable maximum flood (PMF) at each site, yield the following conclusions: 1) a reconnaissance is the preferred method for defining the needed scope and emphasis of geomorphic hazard evaluations; 2) the reliability of an evaluation is grossly affected by the geologic recored preserved in each study area; 3) in many cases, the probability of a hazard from slow erosional processes may be higher than the probability of catastrophic flooding; and 4) the Holocene geologic record may not contain evidence of floods similar to the calculated PMF.

5206 Regulations

REFER ALSO TO CITATION(S) 37634

38920 (GAO/RCED—86-7) Acid rain. Federal research into effects on waters and forests. (General Accounting Office, Washington, DC (USA). Resources, Community and Economic Development Div.). Dec 1985. 54p. U.S. General Accounting Office, P.O. Box 6015, Gaithersburg, MD 20877. File Number TI86901428.

Report to the Chairman, Sub Committee on Oversight and Investigations, Committee on Energy and Commerce, House of Representatives.

Research directed at identifying the adverse effects of acid deposition on lakes and streams included 81 projects as of the end of fiscal year 1985. Initial task force analyses of research results indicate that certain lakes in the eastern states are acidic. Under the task force's present research schedule, it will be a year or more before research determines the condition of other lakes and streams identifies which lakes have a high potential of becoming acidic in the future, and addresses questions about the extent of damage done to fish and other aquatic life. Research directed at identifying the adverse effects of acid deposition on forests included 17 projects as of the end of fiscal year 1985. Forests did not emerge as a major research issue until 1983, and research funding for forest effects in fiscal year 1985 tripled the total funding for the three previous fiscal years. The task force estimates that it will be 5 or more years before research defines the extent of forest decline and acid deposition's role in forest change. Acid deposition research funding increased from $29 million in fiscal year 1984 to $65 million in fiscal year 1985. The fiscal year 1986 proposed budget calls for $85.4 million; about 51% of this funding is slated for work on water and forest research. No recommendations are given.

53 ENVIRONMENTAL-SOCIAL ASPECTS OF ENERGY TECHNOLOGIES

5301 Social And Economic Studies

38921 Challenges to socio-economic impact modeling: lessons from the Alaska OCS Program. Leistritz, F.L.; Chase, R.A.; Ekstrom, B.L.; Knapp, G.; Huskey, L.; Murdock, S.H.; Scott, M.J. (North Dakota State Univ., Fargo). *Journal of Environmental Management;* 21: No. 4, 301-319(Dec 1985).

Accurately assessing the socio-economic impacts of large-scale resource developments is a complex undertaking which must take account of the conditions under which development is occurring, including the local environmental, economic, social, and cultural conditions. Such impact assessments and modeling efforts are also affected by the policy context of model development. Thus, such factors as the characteristics of the project, the diversity of potential information demands, population and settlement densities, the local economic structure, and the demographic and socio-cultural uniqueness of the affected area all influence the accuracy and usefulness of assessments. This paper examines the context that has surrounded the development and use of models for assessing the socio-economic impacts of outer continental shelf (OCS) petroleum development on rural villages in Alaska - a setting which posed major challenges for impact modelling because of its unique characteristics. It thus provides both a description of the pragmatic steps and an example of the general principles necessary to design and use such models effectively.

5302 Assessment Of Energy Technologies

5303 Environmental Impact Statements

38922 (DOE/EIS—0123F) Direct service industry options. Final enrivonmental impact statement. (Bonneville Power Administration, Portland, OR (USA)). Apr 1986. 318p. NTIS, PC A14/MF A01; 1; GPO Dep. File Number DE86011907.

BPA propoes to implement one or more options to reduce load fluctuations and revenue uncertainty resulting from its electrical service to 10 aluminum smelters and its other direct service industrial customers. BPA believes these options will give BPA greater ability to plan for power needs and help to maintain its relatively strong financial position during the current period of power surplus. They also are expected to enhance BPA's ability to repay the US Treasury. In turn, BPA rates to other customers would stabilize. The final EIS evaluates the effects of four options and their alternatives: No Action; the Variable Rate; the aluminum smelter Conservation/Modernization program; and the IP-PF Rate Link. The EIS also evaluates the cumulative effect of implementing more than one option. The major effects examined include aluminum smelter options, resource operations and development, and socio-economic impacts. Potential envionmental impacts (generally benefits) and potentially major, localized adverse socioeconomic impacts are likely under the no action alternative, a result of closures of or reduced operations at certain Northwest aluminum smelters. The options have a varying effect on the operation and continued viability of Northwest aluminum smelters with consequent environmental and socioeconomic impacts. No decision on any of the four options will be made until 18 days after the Environmental Protection Agency has published the Notice of filing of this final EIS in the Federal Register.

38023 Distribution of protein and RNA in the 30S ribosomal subunit. Ramakrishnan, V. (Brookhaven National Lab., Upton, NY). *Science (Washington, D.C.);* No. 4745, 1562-1564(28 Mar 1986).

In Escherichia coli, the small ribosomal subunit has a sedimentation coefficient of 30S, and consists of a 16S RNA molecule of 1541 nucleotides complexed with 21 proteins. Over the last few years, a controversy has emerged regarding the spatial distribution of RNA and protein in the 30S subunit. Contrast variation with neutron scattering was used to suggest that the RNA was located in a central core of the subunit and the proteins mainly in the periphery, with virtually no separation between the centers of mass of protein and RNA. However, these findings are incompatible with the results of efforts to locate individual ribosomal proteins by immune electron microscopy and triangulation with interprotein distance measurements. The conflict between these two views is resolved in this report of small-angle neutron scattering measurements on 30S subunits with and without protein S1, and on subunits reconstituted from deuterated 16S RNA and unlabeled proteins. The results show that (i) the proteins and RNA are intermingled, with neither component dominating at the core or the periphery, and (ii) the spatial distribution of protein and RNA is asymmetrical, with a separation between their centers of mass of about 25 angstroms.

38024 Appearance and accumulation of C_4 carbon pathway enzymes in developing wheat leaves. Aoyagi, K.; Bassham, J.A. (Lawrence Berkeley Lab., CA). *Plant Physiology;* 80: No. 2, 334-340(Feb 1986). Contract AC03-76SF00098.

Soluble protein has been extracted from sections of wheat leaves, from base to tip, and the content of several key enzymes of photosynthetic carbon assimilation in each section has been determined by the protein blot method. In the first leaf, ribulose 1,5-bisphosphate carboxylase (RuBPC) (EC 4.1.1.39) in the basal 0 to 1 centimeter section is about 12% the level in the tip section, whereas phosphoenolpyruvate carboxylase (EC 4.1.1.31) is present in small amounts in the basal section and does not change much in the tip. Pyruvate orthophosphate dikinase (PPDK) (EC 2.7.9.1) first appears in the 4 to 6 centimeter section and increases gradually with development to 10-fold in the tip. Malic enzyme, NADP-dependent (EC 1.3.1.37) also appears in the 4 to 6 centimeter section but remains low to the tip. Fixation of $^{14}CO_2$ by wheat leaf base sections resulted in 42% of total incorporation into malate and aspartate, indicating β-carboxylation, whereas in the tip section these labeled compounds were only 8% of the total. Although the amount of PPDK in wheat leaves is only 1 to 3% of that in maize leaves, this C_3 PPDK may have a limited role in photosynthesis leading to formation of C_4 compounds. The possibility of a further role, similar to that in C_4 plants, but for intracellular carbon transport in wheat leaves is discussed. The presence of malic dehydrogenase, NADP-specific (EC 1.1.1.82) in wheat leaf chloroplasts was shown, a necessary though not sufficient condition for such a proposed role. Assuming each of the four enzymes associated with C_4 carbon transport were fully active in vivo during photosynthesis, PPDK would still be rate limiting, even in the leaf tip where its activity is maximal. Possible evolutionary and breeding implications are discussed.

38025 Host-pathogen interactions. XXIX. Oligogalacturonides released from sodium polypectate by endopolygalacturonic acid lyase are elicitors of phytoalexins in soybean. Davis, K.R.; Darvill, A.G.; Albersheim, P.; Dell, A. (Univ. of Colorado, Boulder). *Plant Physiology;* 80: No. 2, 568-577(Feb 1986). Contract AC02-76ER01426.

Recent studies have demonstrated that an apparently homogeneous preparation of an α-1,4-D-endopolygalacturonic acid lyase (EC 4.2.2.2) isolated from the phytopathogenic bacterium Erwinia carotovora induced phytoalexin accumulation in cotyledons of soybean (Glycine max [L.] Merr. cv Wayne) and that this pectin-degrading enzyme released heat-stable elicitors of phytoalexins from soybean cell walls, citrus pectin, and sodium polypectate. The present paper reports the purification, by anion-exchange chromatography on QAE-Sephadex columns followed by gel-permeation chromatography on a Bio-Gel P-6 column, of the two fractions with highest specific elicitor activity present in a crude elicitor-preparation obtained by lyase treatment of sodium polypectate. Structural analysis of the fraction with highest specific elicitor activity indicated that the major, if not only, component was a decasaccharide of α-1,4-D-galactosyluronic acid that contained the expected product of lyase cleavage, 4-deoxy-β-L-5-threo-hexopyranos-4-enyluronic acid (4,5-unsaturated galactosyluronic acid), at the nonreducing terminus. This modified decagalacturonide fraction exhibited half-maximum and maximum elicitor activity at 1 microgram/cotyledon (6 micromolar) and 5 micrograms/cotyledon (32 micromolar) galactosyluronic acid equivalents, respectively. Reducing 90 to 95% of the carboxyl groups of the galactosyluronic acid residues abolished the elicitor activity of the decagalacturonide fraction. The second most elicitor-active fraction contained mostly undeca-α-1,4-D-galactosyluronic acid that contained 4,5-unsaturated galactosyluronic acid at the nonreducing termini. This fraction exhibited half-maximum and maximum elicitor activity at approximately 3 micrograms/cotyledon (17 micromolar) and 6 micrograms/cotyledon (34 micromolar) galactosyluronic acid equivalents, respectively.

38026 Compartmentation and equilibration of abscisic acid in isolated Xanthium cells. Bray, E.A.; Zeevaart, J.A.D. (Michigan State Univ., East Lansing). *Plant Physiology;* 80: No. 1, 105-109(Jan 1986). Contract AC02-76ER01338.

The compartmentation of endogenous abscisic acid (ABA), applied (+/-)-[^{3}H]ABA, and (+/-)-trans-ABA was measured in isolated mesophyll cells of the Chicago strain of Xanthium strumarium L. The release of ABA to the medium in the presence or absence of DMSO was used to determine the equilibration of ABA in the cells. It was found that a greater percentage of the (+/-)-[^{3}H]ABA and the (+/-)-trans-ABA was released into the medium than of the endogenous ABA, indicating that applied ABA did not equilibrate with the endogenous material. Therefore, in further investigations only the compartmentation of endogenous ABA was studied. Endogenous ABA was released from Xanthium cells according to the pH gradients among the various cellular compartments. Thus, darkness, high external pH, KNO_3, and drought-stress all increased the efflux of ABA from the cells. Efflux of ABA from the cells in the presence of 0.6 M mannitol occurred within 30 seconds, but only 8% of the endogenous material was released during the 20 minute treatment.

38027 Formation of phospholipid-rich HDL: a model for square-packing lipoprotein particles found in interstitial fluid and in abetalipoproteinemic plasma. Forte, T.M.; Ren, C.L.; Nordhausen, R.W.; Nichols, A.V. (Lawrence Berkeley Lab., CA). *Biochimica et Biophysica Acta;* 834: 386-395(1985).

The major bovine HDL subfraction, fraction I-HDL, was incubated with increasing amounts of dimyristoylphosphatidylcholine (DMPC). HDL size, as determined by gradient gel electrophoresis and electron microscopy, increased with increasing HDL-phospholipid to DMPC mole ratios. Control fraction I-HDL were spherical, hexagonally-packing particles with a peak on gradient gel electrophoresis at 12.3 +/- 0.1 nm; at a ratio of 1:0.5, larger, mainly spherical particles with a peak at 12.9 +/- 0.08 nm were formed. At a ratio of 1:1, occasional square-shaped particles were seen by electron microscopy; by gradient gel analysis, the mean diameter of the HDL-product increased to 13.7 +/- 0.1 nm. At the 1:2 ratio, extensive domains of square-packing particles were noted; the major size peak of this product was 14.6 +/- 0.08 nm. In all incubations with DMPC, a small 9.4 +/- 0.08 nm product was formed; it was most pronounced at the 1:2 ratio. The large, less dense particles generated by incubation contained apolipoprotein A-I and small molecular weight proteins. The 9.4 nm product contained only apolipoprotein A-I. The less dense product formed during incubation at the 1:2 ratio had a decreased protein-to-lipid ratio relative to control HDL and a 2-fold increase in percent phospholipid. At a 1:2 ratio, incorporation of DMPC into fraction I-HDL results

in the loss of one molecule of apolipoprotein A-I; the resultant particle is a stable phospholipid-rich and protein-poor HDL which has a square-packing geometry. These phospholipid-laden HDL are morphologically similar to lipoproteins isolated from interstitial fluid or from plasma of abetalipoproteinemic patients. These data suggest that the unusual morphological properties of the latter biologically formed particles may be due to increases in the polar lipid contents, and concomitant decreases in surface protein. 27 references, 6 figures, 2 tables.

38928 Distribution of label after intragastric administration of ^{7}Be-labeled carbon to weanling and aged mice. LeFevre, M.E.; Joel, D.D. (Brookhaven National Lab., Upton, NY). *Proceedings of the Society for Experimental Biology and Medicine;* No. 1, 112-119(May 1986).

Single doses of ^{7}Be-labeled carbon particles prepared by proton bombardment of carbon black were administered by gavage to weanling (4 weeks) and aged (18 monthy) mice. Body distribution of ^{7}Be radioactivity was determined 4 hr and 1, 2, 5, and 14 days later. The results were compared with those obtained after administration of a solution of ^{7}BeCl2. ^{7}Be radioactivity in nonintestinal tissues was 17-58 times greater in mice gavaged with the soluble salt than in those gavaged with the particles, indicating that particle-bound ^{7}Be was well confined to the gastrointestinal tract. Upper limits of the amount of labeled carbon remaining in intestinal Peyer's patches were as follows: 1 day: weanling, 1.8 X 10(-3)%, old, 5.5 X 10(-3)%; 15 days: weanling, 3.3 X 10(-5)%, old, 8.4 X 10(-5)%. The particles are potentially useful as models for diesel emissions or other particulate pollutants.

38929 Appearance and accumulation of C_4 carbon pathway enzymes in developing maize leaves and differentiating maize A188 callus. Aoyagi, K.; Bassham, J.A. (Lawrence Berkeley Lab., CA). *Plant Physiology;* 80: No. 2, 322-333(Feb 1986). Contract AC03-76SF00098.

Regenerating maize A188 tissue cultures were examined for the presence of enzymes involved in C_4 photosynthesis, for cell morphology, and for ^{14}C labeling kinetics to study the implementation of this pathway during plant development. For comparison, sections of maize seedling leaves were examined. Protein blot analysis using antibodies to leaf enzymes showed a different profile of these enzymes during the early stages of shoot regeneration from callus from the closely-coordinated profile observed in seedling leaves. Pyruvate orthophosphate dikinase (PPDK) (EC 2.7.9.1) and phosphoenolpyruvate carboxylase (PEPC) (EC 4.1.1.31) were found in nonchlorophyllous callus while ribulose 1,5-bisphosphate carboxylase (RuBPC, EC 4.1.1.39) and malic enzyme, NADP-specific (ME-NADP) (EC 1.3.1.37) were not detectable until later. Enzyme activity assays showed the presence of ME-NADP as well as PEPC and PPDK in nonchlorophyllous callus. However, the activities of ME-NADP and PEPC had properties similar to those of the enzymes from C_3 leaves and from etiolated C_4 leaf tissues, but differing from the corresponding enzymes in the mature leaf. Immunoprecipitation of in vitro translation products of poly(A)RNA extracted from embryoid-forming callus showed both the 110 kilodalton precursor to chloroplast PPDK and the 94 kilodalton polypeptide. Therefore, the chloroplast tye of PPDK mRNA is present prior to the appearance of leaf morphology. Analysis of the labeled products of $^{14}CO_2$ fixation by nonchlorophyllous calli indicated β-carboxylation to give acids of the tricarboxylic acid cycle, but no incorporation into phosphoglycerate. With greening of the callus, some incorporation into phosphoglycerate and sugar phosphates occurred, and this increased in shoots as they developed, although with older shoots the increase in β-carboxylation products was even greater.

38930 Association of the chloroplastic respiratory and photosynthetic electron transport chains of Chlamydomonas reinhardii with photoreduction and the oxyhydrogen reaction. Maione, T.E.; Gibbs, M. (Brandeis Univ., Waltham, MA). *Plant Physiology;* 80: No. 2, 364-368(Feb 1986). Contract AC02-76ER03231.

The hydrogenase-dependent processes, photoreduction and the dark oxyhydrogen reaction, both of which can support CO_2 assimilation, were compared with aerobic photosynthesis and respiration for their sensitivity to electron transport inhibitors in cells and intact chloroplasts of Chlamydomonas reinhardii 11-32/6. Photoreduction but no photosynthesis was inhibited in chloroplasts and the oxyhydrogen reaction detected only in cells was inhibited up to 75 and 90%, respectively, by 150 micromolar rotenone, indicating the involvement of a NAD(P)H-plastoquinone oxidoreductase in the hydrogen utilizing pathways. The oxyhydrogen reaction coupled to CO_2 fixation was inhibited more than 95% by 10 micromolar 2,5 - dibromo - 3 - methyl - 6 - isopropyl - p - benzoquinone (DBMIB), a concentration which did not affect respiratory activity. In cells, both photoreduction and the oxyhydrogen reaction exhibited a similar sensitivity to salicylhydroxamic acid (SHAM) showing approximately 90% inhibition by 7 millimolar concentration. Photosynthesis was inhibited only 30% by the same concentration of SHAM. Antimycin A (18 micromolar, 10 micrograms per milliliter) inhibited both photoreduction (80%) and the oxyhydrogen reaction (92%) in cells with the oxyhydrogen reaction being approximately 10 times more sensitive to lower concentrations of the inhibitor. Antimycin A at 18 micromolar concentration did not inhibit photosynthetic CO_2 fixation unless the cells were adapted to an atmosphere of N_2 and the reaction conducted anaerobically. Photosynthesis, photoreduction, and the oxyhydrogen reaction coupled to CO_2 fixation were all inhibited greater than 90% by 10 micromolar carbonylcyanide-p-trifluoromethoxyphenylhydrazone. ATP added to chloroplasts adapted to an atmosphere of H_2 could support CO_2 uptake in the dark.

38931 Alternative respiratory path capacity in plant mitochondria: effect of growth temperature, the electrochemical gradient, and assay pH. Elthon, T.E.; Stewart, C.R.; McCoy, C.A.; Bonner, W.D. Jr. (Univ. of Pennsylvania, Philadelphia). *Plant Physiology;* 80: No. 2, 378-383(Feb 1986). Contract AC02-82ER12028.

Influence of growth temperature on the capacity of the mitochondrial alternative pathway of electron transport was investigated using etiolated corn (Zea mays L.) seedlings. These seedlings were grown to comparable size in either a warm (30°C) or a cold (13°C) temperature regime, and then their respiration rates were measured as O_2 uptake at 25°C. The capacity of the alternative pathway (KCN-insensitive O_2 uptake) was found essentially to double in shoots of cold-grown seedlings. When mitochondria were isolated from the shoots a greater potential for flow through the alternative path was observed in mitochondria from the cold-grown seedlings with all substrates used (an average increase of 84%). Using exogenous NADH as the substrate, the effect of the electrochemical gradient on measurable capacities of the cytochrome and alternative pathways was investigated in mitochondria from both etiolated seedlings and thermogenic spadices. In corn shoot and mung bean (Vigna radiata L.) hypocotyl mitochondria increased flow through the cytochrome chain in the absence of the electrochemical gradient was found not to influence the potential for flow through the alternative path. However, in mitochondria from skunk cabbage (Symplocarpus foetidus L.) and voodoo lily (Sauromatum gutatum Schott) spadices increased flow through the cytochrome chain in the absence of the gradient occurred at the expense of flow through the alternative pathway. This experiment also revealed that the potential for respiratory control is largely dependent upon the assay pH.

38932 Calcium transport in tonoplast and endoplasmic reticulum vesicles isolated from cultured carrot cells. Bush, D.R.; Sze, H. (Univ. of Maryland, College Park). *Plant Physiology;* 80: No. 2, 549-555(Feb 1986). Contract AS05-82ER13015.

Two active calcium (Ca^{2+}) transport systems have been identified and partially characterized in membrane vesicles isolated from cultured carrot cells (Daucus carota Danvers). Both transport systems required MgATP for activity and were enhanced by 10 millimolar oxalate. Ca^{2+} transport in membrane vesicles derived from isolated vacuoles equilibrated at 1.10 grams per cubic centimeter and comigrated with Cl^--stimulated, NO_3^--inhibited ATPase activity on sucrose density gradients. Ca^{2+} transport in this system was insensitive to vanadate, but was inhibited by nitrate, carbonyl

cyanide-m-chlorophenylhydrazone (CCCP), N,N'-dicyclohexylcarbodiimide (DCCD), and 4,4-diisothiocyano-2,2'-stilbene disulfonic acid (DIDS). The K/sub m/ for MgATP and Ca^{2+} were 0.1 mM and 21 micromolar, respectively. The predominant Ca^{2+} transport system detectable in microsomal membrane preparations equilibrated at a density of 1.13 grams per cubic centimeter and comigrated with the endoplasmic reticulum (ER) marker, antimycin A-insensitive NADH-dependent cytochrome c reductase. Ca^{2+} transport activity and the ER marker also shifted in parallel in ER shifting experiments. This transport system was inhibited by vanadate (I_{50} = 12 micromolar) and was insensitive to nitrate, CCCP, DCCD, and DIDS. Transport exhibited cooperative MgATP dependent kinetica. Ca^{2+} dependent kinetics were complex with an apparent K/sub m/ ranging from 0.7 to 2 micromolar. We conclude that the vacuolar-derived system is a Ca^{2+}/H^{+} antiport located on the tonoplast and that the microsomal transport system is a Ca,Mg-ATPase enriched on the ER. These two Ca^{2+} transport systems are proposed to restore and maintain cytoplasmic Ca^{2+} homeostasis under changing cellular and environmental conditions.

38933 Cyclic and noncyclic photophosphorylation in isolated guard cell chloroplasts from Vicia faba L. Shimazaki, K.; Zeiger, E. (Stanford Univ., CA). *Plant Physiology;* **78**: No. 2, 211-214(Jun 1985).

High rates of both cyclic and noncyclic photophosphorylation were measured in chloroplast lamellae isolated from purified guard cell protoplasts from Vicia Faba L. Typical rates of light-dependent incorporation of ^{32}P into ATP were 100 and 190 micromoles ATP per milligram chlorophyll per hour for noncyclic (water to ferricyanide) and cyclic (phenazine methosulfate) photophosphorylation, respectively. These rates were 50 to 80% of those observed with mesophyll chloroplasts. Noncyclic photophosphorylation in guard cell chloroplasts was completely inhibited by 3-(3,4-dichlorophenyl)-1,1-dimethylurea supporting the notion that photophosphorylation is coupled to linear electron flow from photosystem II to photosystem I. Several lines of evidence indicated that contamination by mesophyll chloroplasts cannot account for the observed photophosphorylation rates. A comparison of the photon fluence dependence of noncyclic photophosphorylation in mesophyll and guard cell chloroplasts showed significant differences between the two preparations, with half saturation at 0.04 and 0.08 millimole per square meter per second, respectively.

38934 Cell wall yield properties of growing tissue: evaluation by in vivo stress relaxation. Cosgrove, D.J. (Pennsylvania State Univ., University Park). *Plant Physiology;* **78**: No. 2, 347-356(Jun 1985).

Growing pea stem tissue, when isolated from an external supply of water, undergoes stress relaxation because of continued loosening of the cell wall. A theoretical analysis is presented to show that such stress relaxation should result in an exponential decrease in turgor pressure down to the yield threshold (Y), with a rate constant given by phi ϵ where phi is the metabolically maintained irreversible extensibility of the cell wall and ϵ is the volumetric elastic modulus of the cell. Stress relaxation was measured in pea (Pisum sativus L.) stem segments using the pressure microprobe technique. From the rate of stress relaxation, phi of segments pretreated with water was calculated to be 0.08 per megapascal per hour while that of auxin-pretreated tissue was 0.24 per megapascal per hour. These values agreed closely with estimates of phi made by a steady-state technique. The yield threshold (0.29 megapascal) was not affected by auxin. A theoretical analysis is also presented to show that the tissue hydraulic conductance may be estimated from the T/sub 1/2/ of tissue swelling. Experimentally, pea stems had a swelling T/sub 1/2/ of 2.0 minutes, corresponding to a relative hydraulic conductance of about 2.0 per megapascal per hour. This value is at least 8 times larger than phi. From these data and from computer modeling, it appears that the radial gradient in water potential which sustains water uptake in growing pea segments is small (0.04 megapascal). This means that hydraulic conductance does not substantially restrict growth. The results also demonstrate that the stimulation of growth by auxin can be entirely accounted for by the change in phi.

38935 Ammonium release by juveniles and adult females of the subtropical marine copepod Eucalanus pileatus. Paffenhoefer, G.A.; Gardner, W.S. (Skidaway Institute of Oceanography, Savannah, GA). *Journal of Plankton Research;* **6**: No. 3, 505-513(1984). Contract AS09-76EV00936.

Release rates of ammonium by nauplii, copepodid stages (CII and CIV) and adult females of the marine copepod Eucalanus pileatus at 0.1 and 3.0 $mm^3\ l^{-1}$ of the diatom Thalassiosira weissflogii were determined at 20°C. When food was abundant, animals of all stages released ammonium at similar rates per unit ash-free dry weight [24-35 nmol NH_4 (mg AFDW)$^{-1}$ h^{-1} on average]. At low food levels, CIVs and adult females released ammonium significantly more slowly than did the nauplii or CIIs [28 and 24 versus 51 and 50 nmoles (mg AFDW)$^{-1}$ h^{-1}]. Because they weighed less (50%), low-food nauplii and CIIs had higher calculated weight-specific excretion rates, than high-food ones of the same stage but release rates per copepod were similar in the two food regimens. In contrast to the early life stages, the CIVs and adult females released less ammonium per copepod in the low-food than in the high-food environment.

38936 Nickel. Sunderman, F.W. Jr. pp 279-306 of Hazardous metals in human toxicology. Vercruysse, A. (ed.). Amsterdam, Netherlands; Elsevier Science Publishers B.V. (1984).

The determination of nickel in biological materials has been reviewed, with emphasis on the following topics: precautions for preventing nickel contamination during specimen collection and processing; preliminary steps for oxidation or removal of organic matter; concentration and separation procedures; instrumental methods for quantitation of nickel; reference values for nickel concentrations in human body fluids, tissues and excreta; and nickel concentrations in urine specimens from workers in various occupational groups. Electrothermal atomic-absorption spectrophotometry (EAAS) is currently the most sensitive, convenient and reliable technique for the determination of nickel in biological materials, EAAS is rivalled in sensitivity by three other techniques: differential pulse polarography, particle-induced x-ray emission spectrometry and gas chromatography with electron-capture detection. With further refinements, each of these techniques should be suitable for clinical applications. Combination of isotope-dilution mass spectrometry with the gas chromatographic separation of volatile nickel chelates may eventually become the definitive method for the determination of nickel to biological materials. 114 references, 10 tables.

38937 (DOE/EV/04318—6) Preparation of gallium-68 radiopharmaceuticals for positron tomography. Progress report, November 1, 1983-May 31, 1986. Welch, M.J. (Washington Univ., St. Louis, MO (USA). Edward Mallinckrodt Inst. of Radiology). May 1986. Contract AC02-77EV04318. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86011283.

The work described in this paper centers on the development and assessment of an improved germanium-68/gallium-68 generator, the testing and evaluation of simple germanium/gallium compounds for use with PET, and on methods of attaching gallium and indium to proteins for use with PET as well as indium-111 and conventional images. This work has expanded to use this technology with monoclonal antibodies. We are also studying the mechanisms and stability of binding of these metals to these modified proteins. The syntheses and assessment of new ligands, specifically aimed at measurement of myocardial and brain blood flow are also described. 7 figs., 11 tabs.

38938 **(DOE/EV/04969—T2) [Myocardinal perfusion scintigraphy using a new technique, the mesh chamber]. Second year progress report, 1980.** (Massachusetts Inst. of Tech., Cambridge (USA)). 1980. Contract AC02-78EV04969. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86011573.

Tests of small meshes with multi-wire proportional chamber readout gave efficiencies for the detection of annihilation radiation which corresponded to those calculated. Our idea for using an X-Y plotter to put down the wire worked out well. This gave us fair assurance of the success of the chamber for two dimensional pictures. 4 figs.

38939 **(AD-A—165845/9/XAB) Studies on the immunochemical techniques for detection of selected fungal and dinoflagellate toxins. Annual progress report No. 2, 1 August 1982-31 July 1983.** Chu, F.S. (Wisconsin Univ., Madison (USA)). 15 Aug 1983. 30p. NTIS, PC A03/MF A01.

During the second year (August 1, 1982 to July 31, 1983), conditions for improving antibody production against T-2 toxin were studied. T-2 HS-BSA which has 10-15 moles of T-2 per mole of BSA was found to be a better immunogen than T-2-HG-BSA. Antibody titers as high as 11,000-14,000 were obtained from rabbits after repeated booster injections. High specific radioactive T-2, DAS, DOVE were prepared. With combination of the high specific radioactive T-2 toxin and high titer antibody, as little as 25 pg of T-2 toxin can be detected by the RIA in each assay. An indirect ELISA which permits detection of 0.2-1 ppb of T-2 toxin in urine, serum and milk was also established. Antibody against T-2 toxin was used to localize T-2 toxin in different tissues and organs of mice by an immunohistochemical technique. A collaborative study with Dr. Hunter revealed that antibody titers of T-2 toxin increased drastically in an immunomodulation system in mice. Titers as high as 50,000 were obtained in mice 10 days after immunization with T-2-HS-IgG (goat). Antibodies against diacetoxyscirpenol (DAS), and deoxyverrucarol (DOVE) were obtained from rabbits after immunizing with DAS-hemisuccinate (HS)-BSA, DAS-hemiglutarate (HG)-BSA and DOVE-HS-BSA. DAS-HG-BSA was found to be a better immunogen than DAS-HS-BSA for the production of antibody against DAS. The antibody for DAS is most specific for DAS. However, DOVE antidbodies were found to be less specific. Radioimmunoassays for both DAS and DOVE were established, and the detection limits were found.

38940 **(AD-A—166012/5/XAB) Pharmacological management of sepsis.** Fletcher, J.R. (Naval Medical Research Inst., Bethesda, MD (USA)). 1985. 9p. (NMRI—85-97). NTIS, PC A02/MF A01.

Systemic sepsis continues to be the most-difficult management problem in caring for the combat casualty. The complications of sepsis pervade all areas of injury to soldiers in the field, whether it is mechanical (missiles), thermal (burns), chemical, biological, or radiation injury. With the advent of tactical nuclear weapons, the problem of sepsis will be much higher in future wars than has previously been experienced through the world. The purpose of this chapter is a) to review the data suggesting pharmacological agents that may benefit the septic patient, and b) to emphasize the adjunctive therapies that should be explored in clinical trials. The pharmacological management of sepsis remains controversial. Most of the drugs utilized clinically treat the symptoms of the disease and are not necessarily directed at fundamental mechanisms that are known to be present in sepsis. A broad data base is emerging, indicating that NSAID should be used in human clinical trials. Prostaglandins are sensitive indicators of cellular injury and may be mediators for a number of vasoactive chemicals. Opiate antagonists and calcium channel blockers require more in-depth data; however, recent studies generate excitement for their potential use in the critically ill patient. Pharmacological effects of antibiotics, in concert with other drugs, suggest an entirely new approach to pharmacological treatment in sepsis. There is no doubt that new treatment modalities or adjunctive therapies must be utilized to alter the poor prognosis of severe sepsis that we have observed in the past 4 decades.

38941 **(AD-A—166343/4/XAB) Pathologic findings in laboratory animals exposed to hydrocarbon fuels of military interest.** Bruner, R.H. (Naval Medical Research Inst., Bethesda, MD (USA)). 1984. 9p. (NMRI—84-76). NTIS, PC A02/MF A01.

Male and female Fischer-344 rats and female C57/BL6 mice were subjected to subchronic and chronic inhalation exposures to a variety of distillate and synthetic hydrocarbon fuels of military interest. In general, male rats exposed to all agents developed a dose-related nephropathy which was not observed in females, controls, or exposed mice. Kidney lesions consisted of greatly increased cytoplasmic hyaline droplets in proximal tubular epithelium, necrosis of proximal tubular cells, and intratubular plugs of necrotic cell debris at the junction of the outer and inner stripe of the outer medulla. Following exposure, males that were held for lifetime oncogenic evaluation exhibited abundant mineralized casts in medullary tubules, multifocal to diffuse papillary hyperplasia of pelvic urothelium, and accentuated tubular degeneration compatible with progressive nephrosis of old rats. Male rats exposed six hours/day, five days/week for one year to two synthetic hydrocarbon missile fuels had significant increases in renal cell tumors, whereas males exposed for 90 days continuously to various distillate fuels failed to develop increased kidney neoplasia following lifespan observation. The pathogenic mechanisms remain unclear, but it is proposed that kidney changes may be related to an inability of renal tubular cells to efficiently digest resorbed alpha 2u globulin - a special protein of male rats which is synthesized in the liver.

38942 **Hematology of a murine β-thalassemia: a longitudinal study.** Popp, R.A.; Popp, D.M.; Johnson, F.M.; Skow, L.C.; Lewis, S.E. (Oak Ridge National Lab., TN). *Annals of the New York Academy of Sciences;* **445**: 432-444([1986]). Contract AC05-84OR21400.

Mice homozygous for a spontaneous mutation, in which the β-major globin gene is deleted, have clinical symptoms of β-thalassemia. These mice have a hypocellular, hypochromic, microcytic anemia that becomes more severe with increasing age. The defective red cell morphology, decreased osmotic fragility of erythrocytes and shortened red cell life span found in β-thalassemic mice are similar to those observed in human β-thalassemia. Synthesis of β-globin is depressed but not as much as might be expected because the expression of theβ-minor globin gene is enhanced to encode two to three times more globin than in normal mice. Splenomegaly, an enlarged pool of stem cells for erythropoiesis, and iron overloading occur in older mice. The fact that these mice remain moderately healthy makes them a very suitable animal model in which to develop and test alternative techniques of gene therapy that could be successfully applied to the treatment of human thalassemia. Homozygous β-thalassemic mice have large deposits of iron in their tissues, which might make these mice also useful for in vivo tests of the effectiveness and possible long-term side effects for newly developed iron chelators.

38943 **(DOE/BP/13084—2) Pen rearing and imprinting of fall chinook salmon. Final report.** Novotny, J.; Macy, T.L.; Gardenier, J.T. (Fish and Wildlife Service, Cook, WA (USA). Willard Field Station; Fish and Wildlife Service, Vancouver, WA (USA). Vancouver Fishery Assistance Office). May 1986. Contract AI79-83BP13084. 72p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86011726.

Upriver bright fall chinook salmon (Oncorhynchus tshawytscha) are being reared in a backwater and a pond along John Day Reservoir to evaluate the benefits of rearing fish and releasing them off-station compared to traditional hatchery procedures. Fish reared in net pens at a density/feeding combination judged to be the economic optimum of those used during 1984 rearing trials exhibited good growth and smolt development. Poor growth and smolt development was observed in fish reared in a large barrier net, especially during the initial two weeks after stocking. In addition, mortality of fish in the barrier net was high (49%) in relation to any of the other treatments tested thus far. Unfed fish in pens utilized the available natural food base, but zooplankton densities were apparently not sufficient for growth, and may have been marginal for sustenance, especially at higher density. ATPase activities at release were significantly higher in low-density pens than in higher density pens, but development at all densities was retarded when compared with ATPase activities of fed fish. Preliminary cost estimates for producing fish using the rearing strategies developed in the current pen-rearing study compared favorably with the average costs of rearing salmonids in a Northwest hatchery.

38944 **(DOE/BP/16726—1) Fisheries enhancement in the Fish Creek Basin: an evaluation of in-channel and off-channel projects, 1984. Annual report 1984.** Everest, F.H.; Sedell, J.R.; Reeves, G.H.; Wolfe, J. (Forest Service, Corvallis, OR (USA). Forestry Sciences Lab.; Mount Hood National Forest, Estacada, OR (USA). Estacada Ranger District). Jul 1985. Contract AI79-84BP16726. 234p. NTIS, PC A11/MF A01; 1; GPO Dep. File Number DE86011440.

Construction and evaluation of salmonid habitat improvements on Fish Creek, a tributary of the upper Clackamas River, was continued in fiscal year 1984. Habitat improvement work in the basin is designed to increase the annual number of chinook, coho, and steelhead smolt outmigrants from the basin. The primary objectives include: (1) evaluation and quantification of changes in salmonid spawning and rearing habitat resulting from a variety of habitat improvements; (2) evaluation and quantification of changes in fish populations and biomass resulting from habitat improvements; and (3) evaluation of the cost-effectiveness of habitat improvements developed with BPA and KV funds on Fish Creek.

38945 **(AD-A—165810/3/XAB) AFRRI (Armed Forces Radiobiology Research Institute). Annual research report, 1 October 1984-30 September 1985.** (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). 30 Sep 1985. 101p. (AFRRI-ARR—19). NTIS, PC A06/MF A01.

The Armed Forces Radiobiology Research Inst.(AFRRI) is the primary DOD facility for scientific research in the field of radiobiology and related matters. It conducts applied and basic research that is essential for the operational and medical support of the DOD. The work is carried out by five scientific departments: Behavioral sciences - Effects on ionizing radiation, chemicals, and drugs on performance. Biochemistry - Elucidation of mechanisms of injury, repair, and protection from the effects of ionizing radiation alone or in combination with other agents; development of improved methods to detect and quantify the severity of radiation injury. Experimental Hematology - Investigation of radiation injury of bone marrow; development of therapy for damage from intermediate radiation doses; determination and treatment of injuries caused by combined effects of radiation, blast, and burns. Physiology - Research on cellular, tissue, and whole-animal models to determine physiological and biophysical changes resulting from radiation either alone or in combination with drugs and other chemicals. and Radiation Sciences - Operation, maintenance, and quality control of all AFRRI radiation sources, radiation dosimetry and estimation of tissue doses at various depths in different kinds if tissues; development and use of nuclear medicine and magnetic spectroscopic techniques for determining radiation damage in animals and model systems.

38946 **(DOE/EV/03490—2530) Report of activities 1947-1985.** (Rochester Univ., NY (USA). Dept. of Radiation Biology and Biophysics). 1986. Contract AC02-76EV03490. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86011966.

Contract AC02-76EV03490 with the University of Rochester for 38 years funded a program of scientific investigation supporting the requirements and goals of Manhattan District, Atomic Energy Commission and successor organizations, with particular emphasis in development of exposure standards for ionizing and nonionizing radiations, exposure to toxic compounds and dusts, and to the long-term effects of these exposures in biological systems. Over the course of the contract, more than 2000 individual publications resulted as well as several compendia describing toxicity of materials and biological effects of radiation. Nearly 250 Ph.D. degrees were awarded in the fields of radiation biology, physics, and pharmacology/toxicology over that period and greater than 500 Masters degrees in these and subject areas such as industrial hygiene, radiological health, etc.

38947 **(GSF—41/85) Placental transfer of iodine and iodine compounds.** Stieve, F.E.; Zemlin, G.; Griessl, I. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.); Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz). Nov 1985. 167p. (In German). (GSF-S—1286). NTIS (US Sales Only), PC A08/MF A01. File Number DE86752085.

The following topics are valid for man and mammalians with haemochorial placenta, which are examined up to now: Within several hours after injection of radioactive inorganic iodide-compounds activity can be realized in the fetus. The transfer occurs bidirectionally through the placenta. The concentration of radioactive iodide in the fetal serum exceeds that of the maternal one already a short time after application. Radioactive iodide accumulates in the fetus before its thyroid starts its function and is mainly concentrated in liver and intestine; after starting its function, the fetal thyroid, stores the radioactive iodide at a very high percent rate. During gestation the concentration of radioactive iodide in the fetal thyroid increases and at the end of gestation it can exceed by 3-10 fold that in the maternal thyroid. Single uptake of radioactive iodide leads to a higher activity than chronic uptake. No analogy can be found in the concentration of fetal and maternal radioactive thyroid hormon compounds. A placental permeability for T_4 and T_3 only exists to a very small extent. Resulting from radioactive iodide transfer examinations, good accordance can be found between the individual animal species and man, while data on the passage of radioactive thyroid hormones vary to a small extent between the animal species. (orig./MG).

38948 (INIS-mf—9883) Pathological changes in the rabbit lungs after irradiation and after combined irradiation and hyperthermia. Zinner, M. (Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Medizinische Fakultaet). 22 Oct 1984. 70p. (In German). NTIS (US Sales Only), PC A04/MF A01. File Number DE86752076.

The effects of combined irradiation and hyperthermia and of irradiation alone on normal lung tissue was investigated in rabbits. The animals of both therapy groups were irradiated with 2 Gy five times a week for a 6-week period. The animals of group 1 were additionally exposed to hyperthermia 3 times a week after irradiation. The method applied was the condenser field method (25 to 35 Watt/min). Only the right lung was treated in all animals. The animals were sacrificed 3 months after termination of the therapy, and large-surface lung sections were prepared. The following results were obtained: There is a quantifiable difference in the severeness of fibrosis between groups 1 and 2. Fibrosis was more pronounced in group 1 but the difference was not statistically significant. In both groups, fibrosis was unevenly distributed in the different lung areas. Fibrosis was highest in the ventral and apical regions. These were the regions where the highest local temperature rise was recorded during hyperthermia and where the highest local radiation dose was applied. Histologically, signs of acute inflammatory processes were observed in both groups in parallel to regeneration and repair processes involving neogenesis. (orig./MG).

38949 (PNL—5831) Extremity dosimetry at US Department of Energy facilities. Harty, R.; Reece, W.D.; MacLellan, J.A. (Pacific Northwest Labs., Richland, WA (USA)). May 1986. Contract AC06-76RL01830. 63p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86012089.

A questionnaire on extremity dosimetry was distributed to DOE facilities along with a questionnaire on beta dosimetry. An informal telephone survey was conducted as a follow-up survey to answer a few additional questions concerning extremity monitoring practices. The responses to the questionnaire and the telephone survey are summarized in this report. Background information, developed from operational experience and a review of the current literature, is presented as a basis for understanding the information obtained by the survey and questionnaire.

38950 (RFP—3878) Comparing two Poisson populations sequentially: an application. Halteman, E.J. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). 1986. Contract AC04-76DP03533. 6p. (CONF-8604180—1). NTIS, PC A02. File Number DE86009644.

From ASA CO-WYO chapter spring meeting; Boulder, CO, USA (18 Apr 1986).

Rocky Flats Plant in Golden, Colorado monitors each of its employees for radiation exposure. Excess exposure is detected by comparing the means of two Poisson populations. A sequential probability ratio test (SPRT) is proposed as a replacement for the fixed sample normal approximation test. A uniformly most efficient SPRT exists, however logistics suggest using a truncated SPRT. The truncated SPRT is evaluated in detail and shown to possess large potential savings in average time spent by employees in the monitoring process.

38951 Retention of 238Pu-bearing particles by corn plants. Pinder, J.E. 3d.; Doswell, A.C. *Health Physics;* No. 5, 771-776(Nov 1985).

To measure the retention of 238Pu-bearing particulates on plant surfaces, corn plants were exposed to 238Pu deposition in the vicinity of the H-Area nuclear fuel chemical separations facility on the U.S. Department of Energy's Savannah River Plant. Following exposure, plants were removed to an area of lower 238Pu deposition rate and sampled every seven days for 28 days to determine 238Pu retention. To investigate the effects of exposure to wind and precipitation on 238Pu retention, some plants were maintained out of doors while others were maintained in a greenhouse. Plants maintained in the greenhouse showed no statistically significant reduction in 238Pu contents. Plants maintained outside showed 238Pu loss rates consistent with the 14-day retention half-times typically used in radiological assessments. The data analysis of outside plants was complicated by the occurrence of samples with nondetectable 238Pu contents.

38952 Tritium toxicity program in the Medical Department at Brookhaven National Laboratory. Carsten, A.L. (Brookhaven National Lab., Upton, NY). *Annals of the New York Academy of Sciences;* 258-268(1985).

A summary of all the findings to date is given. It appears from this information that it is possible to detect somatic, cytogenetic, and genetic effects resulting from exposures at 33 to 100 times the mpc's for HTO. Similar effects also result from exposure to external gamma rays at an equivalent dose. The reduction in bone marrow cells in animals maintaining normal total cellularity is of interest since it demonstrates both the presence of an effect at the primitive cell level and the animal's ability to compensate for this effect by recruiting stem cells from the G0 resting state. This evidence of damage together with the observed cytogenetic changes leads one to contemplate the possible importance of radiation exposures at these levels for the induction of leukemia or other blood dyscrasias. Studies to investigate this question are now under way. As predicted on the basis of established principles of radiobiology, exposure to tritium beta rays from HTO ingestion results in measurable effects on several animal systems. The importance of position of incorporation of H into molecules of biological importance has not been well defined, nor have the low-dose portions of the dose-response curve for several effects of interest. Experiments designed to address these questions and measure H turnover as a means for analysis of cell kinetics in several systems are now under way.

38953 ^{226}Ra uptake by sagebrush from uniform and nonuniform soil amendments. Simon, S.L.; Fraley, L. Jr. (Colorado State Univ., Fort Collins, CO). *Environmental and Experimental Botany;* 1-8(1985). Contract AC02-79EV10305.

A two-group plant uptake experiment was conducted in which sagebrush seedlings (Artemisia tridentata) were grown in pots containing soil spiked with ^{226}Ra. The objective was to determine the effect of soil tracer amendment configuration on the uptake of ^{226}Ra as determined by the concentration in leaves. The soil in all pots was spiked to contain the same total radioactivity. In one group, the radioactivity was distributed uniformly in the soil. In the other group, the activity was injected into the soil along a narrow vertical line, the site of injection being chosen randomly. The mean ^{226}Ra leaf concentration from each group was 0.8 kBq/kg; however, the coefficient of variation of the leaf concentration from uniformly contaminated soil was 30% as compared to 84% for uptake from injected soil. It was concluded from statistical hypothesis testing that the mean leaf concentration was indistinguishable for the two groups. 20 references, 2 figures, 2 tables.

38954 General discussion on assessment of radiation risks for space flight. Sinclair, W.K.; Fry, R.J.M. (National Council on Radiation Protection and Measurements, Bethesda, MA). *Advances in Space Research;* 4: No. 10, 287-288(1984).

This discussion focuses on several problem areas in relation to the radiation hazards of space flight. A number of biological effects were cited, such as lethality, cell transformation, tumor induction, small colony formation, modification of cell growth rate, etc., in which HZE particles seem to behave in the same way qualitatively as other radiations and in some cases quantitatively. Limitations in the physical description of the radiations in space were discussed with respect to radiation at different locations, with and without shielding, for the purposes of tissue dosimetry, exposure per mission, etc. It was concluded that some dosimetry situations are fairly well documented, including various Apollo and shuttle missions. Approaches to space guidelines involving dose limitations are presented.

38955 Concomitant changes in high temperature tolerance and heat-shock proteins in desert succulents. Kee, S.C.; Nobel, P.S. (Univ. of California, Los Angeles). *Plant Physiology;* 80: No. 2, 596-598(Feb 1986). Contract AC03-76SF00012.

Raising the day/night air temperatures from 30°C/20°C to 50°C/40°C increases the high temperature tolerated by Agave deserti, Carnegiea gigantea, and Ferocactus acanthodes by 6°C to 8°C; the increase is about half completed in 3 days and fully completed in 10 days. A 25 to 27 kilodalton protein concomitantly accumulates for all three desert succulents upon transfer to 50°C/40°C, while accumulation of other heat heat-shock proteins is species specific. Some of the induced proteins are more abundant at 3 days, while others (including the 25-27 kilodalton protein) remain after completion of high temperature acclimation.

38956 (EPRI-CS/EA/EL—4480, pp 6.20-6.22) **Human health risks from PCB-contaminated mineral oil transformers.** Eschenroeder, A.Q.; Faeder, E.J. Mar 1986. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI86920219. (CONF-8510293—).

From EPRI polychlorinated biphenyl (PCB) seminar; Seattle, WA, USA (22 Oct 1985).

The human health risks due to the inhalation of combustion products from accidental mineral oil transformer fires occurring outdoors are estimated. Polychlorinated dibenzofurans (PCDFs) are believed to be the principal toxic products of the pyrolysis of PCBs sometimes found as contaminants in transformer mineral oil. The adverse health effects addressed are those attributable to the toxic action of PCDFs inhaled in the neighborhood of the fire. The likelihood of anyone in the neighborhood of the fire receiving even the conservative EPA safe lifetime dose level is less than one in 7,000,000. Therefore, it would appear as if no significant health risk is posed by inhalation exposure to possible PCDF products from mineral oil transformer fires under the system scenario employed in this analysis.

38957 (OEFZS—4339) **Research strategies against forest dieback. Lectures and discussion.** Orthofer, R. (ed.). (Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H.). Nov 1985. 112p. (In German). (CONF-8505287—; NU—15/85). Oesterreichisches Forschungszentrum Seibersdorf GmbH .

From 2. workshop of the Austrian research program on forest dieback; Seibersdorf, Austria (7 May 1985).

The report contains an introducing overview of the Austrian research program on forest damages (Waldsterben) and documents the 9 lectures and the discussion of the 2nd joint workshop of the Austrian Federal Ministery of Science and Research and the Austrian Research Center Seibersdorf in May 7th, 1985. The lectures present the proposed strategies for some research fields and a comparison of the Austrian research program with similar programs in other countries, especially the FR Germany. (orig.).

38958 (PNL-SA—13632) **Chemical basis for photomutagenicity in synthetic fuels.** Selby, C.P.; Calkins, J.; Enoch, H.G.; Wright, C.W.; Wilson, B.W. (Pacific Northwest Labs., Richland, WA (USA); Kentucky Univ., Lexington (USA)). Dec 1985. Contract AC06-76RL01830. 14p. (CONF-860425—28). NTIS, PC A02/MF A01; GPO Dep. File Number DE86011132.

From 191. American Chemical Society national meeting; New York, NY, USA (13 Apr 1986).

Photomutagens (chemicals that enhance the mutagenicity of near uv-visible radiation) have been detected in a variety of experimental coal- and oil shale-derived synthetic fuels using S. typhimurium strain TA98 and fluorescent light. In this study, photomutagenic activity was measured among synfuel samples that included crude and hydrotreated shale oil, coal oil distillation fractions, and chemical class fractions of coal and shale oils. Photomutagenic activity was found to increase with increasing boiling point and was cencentrated in fractions enriched in neutral polycyclic aromatic hydrocarbons (PAH). These results point to high molecular weight neutral PAH constitutents as important photomutagenic components among the samples tested. The photomutagenic activities of the materials tested correlate well with the previously reported tumorigenic activities of the same samples on mouse skin but correlate poorly with the previously reported mutagenic activities in the conventional Salmonella/mammalian-microsome mutagenicity test in which neutral PAH fractions were inactive.

38959 (SI-R—800901-9) **Mutagenicity of polycyclic aromatic compounds (PAC), identified in source emissions and ambient air.** Moeller, M.; Hagen, I.; Randahl, T. (Sentralinstitutt for Industriell Forskning, Oslo (Norway)). 1985. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86752129.

Several polycyclic aromatic compounds including nitrated and oxygenated derivatives of polycyclic aromatic hydrocarbons were tested for mutagenic activity in the Salmonella/ microsome assay. Among the compounds tested the isomer mix of nitro-1-hydroxypyrenes showed the highest direct mutagenic response in both the Salmonella strain TA98 and TA100. The direct acting mutagenicity of the nitro-1-hydroxypyrene isomer mix was dependent upon reduction of the nitro function as evidenced by the decrease in activity observed with the nitroreductase deficient and arylhydroxylamine estrifying deficient tester strains. The oxygenated derivatives of PAH containing aldehyde or keto groups showed weak or no mutagenic response. In most cases addition of S9 was essential for any mutagenic activity and the strain TA100 was more sensitive than the strain TA98. Within this group, 7H-dibenzo(c,g)fluoren-7-one showed the highest mutagenic effect; 7 and 22 revertants/μg using the strains TA98 and TA100, respectively. 2 appendices describing synthesis of various polycyclic oxigenated mutagens. 3 tables, 9 drawings.

38960 (SI-R—800901-11) **Carcinogenic and mutagenic compounds from energy generation - health effects.** Victorin, K.; Ahlborg, U.G. (Senter for Industriforskning, Oslo (Norway)). Jul 1985. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86752495.

A discussion of health effects caused by mutagenic and carcinogenic compouds from various combustion sources is presented. The report concentrates on Sweden and supports the estimate reached by the Swedish cancer committe, that out of a total of 2000 lung cancer cases each year, in Sweden, around 100 would be caused by air pollution. Traffic and residential heating are the dominating sources of mutagenic air pollution in urban areas. 20 references.

38961 (SVC—85.42) **Management of risk for industrial metallic aerosols. In vitro assessment of delivered dose per unit exposure.** Stern, R.M. (Svejsecentralen, Glostrup (Denmark)). 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752100.

For many complex industrial exposures, and for the case of metallic aerosols in particular, causality between adverse health effects and exposures has been demonstrated without characterization of the causative agent beyond the presence of the putative toxic element. For the case of nickel and chromium in particular, both historical human epidemiological and experimental animal data clearly demonstrate an extremely wide range of potencies for complex occupational exposure and for pure substances which have, in one form or other, one of these elements in common. With only few exceptions, current practice for the control of these and most metals is to regulate exposure of the element per se, although hexavalent chromium (CrVI) and soluble (unspecified further) nickel have specific, stringent exposure limits. The mechanisms underlying the variation in potency have been obscure, but it is evident that cumulative exposure to the element is not a reliable index of risk.

38962 **Inhibition of mouse lung tumor development by hyperoxia.** Lindenschmidt, R.C.; Tryka, A.F.; Witschi, H.P. (Oak Ridge National Lab., TN). *Cancer Research;* 1994-2000(Apr 1986).

The hypothesis was tested that continuous hyperoxia would enhance the development of lung tumors in mice. In strain A/J mice treated with a single dose of urethan (1000 mg/kg) and exposed to 70% O2 for 16 wk, an average of 5 tumors per lung developed, whereas in animals kept in air, an average of 20 tumors per lung was found. When the animals were returned to air after oxygen exposure, it was found that a difference of 15 tumors per

lung between the two groups persisted up to 1 yr later, indicating that O2 was tumoricidal. The shortest duration of O2 exposure to be effective was 4 wk, and delay of O2 exposure up to 12 wk after urethan still was effective in reducing the number of developing tumors. Histopathology showed that continued exposure to 70% O2 produced some hyperplasia of the bronchiolar epithelium and only very discrete changes in the pulmonary parenchyma. Analysis of cell proliferation patterns with a continuous [3H]thymidine labeling technique showed a persistent high cell labeling in the bronchiolar epithelium and a temporary increase in alveolar wall cell labeling. Chronic hyperoxia failed to alter the activities of pulmonary superoxide dismutase or glucose-6-phosphate dehydrogenase. Ornithine decarboxylase, on the other hand, was increased as long as the animals remained exposed to oxygen. It was concluded that hyperoxia kills developing tumor cells in mouse lung.

38963 2-Nitrofluoren-9-one: a unique mutagen formed in the photo-oxidation of 2-aminofluorene. Strniste, G.F.; Nickols, J.W.; Okinaka, R.T.; Whaley, T.W. (Los Alamos National Lab., NM). *Carcinogenesis (New York);* No. 3, 499-502(Mar 1986).

Exposure of solutions of 2-aminofluorene (2-AF, dissolved in dimethylsulfoxide) to near ultraviolet light (u.v.a. wavelengths of 320-400 nm) results in the formation of a variety of photo-products, several of which are direct-acting mutagens in the Ames/Salmonella standard-plate assay. Previously published results from our laboratory have described the chemical identification and kinetics of formation of two of these photo-induced mutagens, 2-nitrosofluorene and 2-nitrofluorene. In this report we present recent data concerning the isolation and chemical identification of another mutagenic photoproduct of u.v.a.-irradiated 2-AF, 2-nitrofluoren-9-one (2-NO2F-9-one). Data are also presented concerning the kinetics of phototransformation of 2-aminofluoren-9-one, an early-appearing and predominant photoproduct in u.v.a.-irradiated solutions of 2-AF, into 2-NO2F-9-one. It is well established that N-oxidation is a critical step in the biotransformations (i.e. enzymatic metabolism) of primary aromatic amines into proximate mutagens/carcinogens. In addition to u.v.a.-mediated N-oxidation of aromatic amines, selective ring photo-oxidation can also occur, resulting in, for example, the production of a carbonyl group at the 9-position of the fluorene molecule. The formation of mutagenic 2-NO2F-9-one in the photochemical oxidation of 2-AF appears to be unique to this process.

38964 Studies on the mechanism of regulation of the mRNA level for a soybean storage protein subunit by exogenous L-methionine. Holowach, L.P.; Madison, J.T.; Thompson, J.F. (Dept. of Agriculture, Ithaca, NY). *Plant Physiology;* **80**: No. 2, 561-567(Feb 1986). Contract AI05-83ER13114.

In previous studies we have shown that when soybean (Glycine max L. Merrill cv Provar) cotyledons are cultured in medium supplemented with L-methionine, the β-subunit of 7S protein and β-mRNA are absent. We have carried our further studies on the mechanism of the methionine action. In one experiment, cotyledons were cultured for 16 days with or without methionine. After 4 days, some cotyledons were transferred from methionine-supplemented to basal (no methionine) medium and vice versa. In basal medium, β-subunit was detected at 4 days whereas in methionine-supplemented medium, no β-subunit was present. When cotyledons were transferred from basal to methionine-supplemented medium, the β-subunit increased within a 4 day period and then remained constant (on a per cotyledon basis). This result indicated that methionine was not acting by accelerating the degradation of the β-subunit. Four days after transfer from supplemented to basal medium cotyledons contained β-subunit, thus demonstrating that the inhibition was reversible. During this time, the uncombined methionine declined from 7 to 1.5 μmoles methionine per gram fresh weight. When β-mRNA was measured by in vitro translation, functional β-mRNA was absent in tissue that was not accumulating β-subunit. The messenger RNA for the β-subunit had a half-life of about 1 day in the presence of methionine. Hybridization of cotyledon mRNA with cDNA complementary to β-mRNA revealed that the 1700 nucleotide β-mRNA was not present in supplemented cotyledons. Thus, expression of the β-subunit gene is controlled at the level of transcription, RNA processing, or RNA turnover, rather than at the level of translation.

38965 Health effects of diesel exhaust: a case study in risk assessment. McClellan, R.O. (Inhalation Toxicology Research Institute, Albuquerque, NM). *American Industrial Hygiene Association Journal;* **47**: No. 1, 1-13(Jan 1986). Contract AC04-76EV01013.

From American industrial hygiene conference; Dallas, TX, USA (18-23 May 1986).

The increased emphasis given to balancing costs and benefits in developing regulations for factors influencing human health has provided a strong impetus for development of a more formalized approach to risk assessment. Exposure to diesel exhaust gases is used as an example in order to examine the components of the risk assessment process as it is presently understood. The components of risk assessment are hazard identification, exposure-dose-response assessment, and exposure assessment. Risk is then characterized. Based on these studies, risk management options are defined, and the consequences of options are delineated, including public health, economic costs, and social and political factors. 28 references, 11 figures, 5 tables.

38966 Effects of inhaled diesel exhaust on immune responses after lung immunization. Bice, D.E.; Mauderly, J.L.; Jones, R.K.; McClellan, R.O. (Inhalation Toxicology Research Institute, Albuquerque, NM). *Fundamental and Applied Toxicology;* 1075-1086(Dec 1985).

The inhalation of diesel exhaust particles and the accumulation of these particles in the lung-associated lymph nodes could alter the development of immune responses after lung immunization. To study this possibility, Fischer 344 rats and CD-1 mice were exposed to three levels of diesel exhaust (nominal concentration--7000, 3500, or 350 micrograms particles/m3). Chamber controls and exposed animals were immunized by intratracheal instillation of sheep red blood cells (SRBC) after 6, 12, 18, and 24 months of exposure. The number of anti-SRBC IgM antibody-forming cells (AFC) in the lung-associated lymph nodes and spleen was evaluated after immunization. The lung-associated lymph nodes from rats and mice exposed to the high levels of diesel exhaust were black with accumulated diesel particles, and the number of lymphoid cells was significantly elevated at each sacrifice time, while rats exposed to the medium level of diesel exhaust also had elevated numbers of cells in these tissues at 12, 18, and 24 months of exposure. The total number of AFC in the lung-associated lymph nodes was significantly elevated (p less than 0.05) in rats exposed to medium and high levels of diesel exhaust, but no significant effects were observed in exposed mice. Data expressed as AFC/10(6) lymphoid cells in rats and mice, and the level of specific IgM, IgG, or IgA antibody in rat sera were not significantly altered. We conclude that the increased cellularity, and the presence of diesel particles in the lung-associated lymph nodes, had a minimal effect on the immune and antigen filtration functions of these tissues.

38967 Correlation of the octanol/water partition coefficient with clearance halftimes of intratracheally instilled aromatic hydrocarbons in rats. Bond, J.A.; Baker, S.M.; Bechtold, W.E. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM, USA. Inhalation Toxicology Research Inst.). *Toxicology;* **36**: No. 4, 285-295(Sep 1985).

Studies on the lung retention of polycyclic aromatic hydrocarbons (PAH) after inhalation have indicated that, in general, the PAH are rapidly cleared from the respiratory tract. Clearance of the PAH from the lungs is best described as bi-phasic, with the long-term component of the clearance curve having a half-time of greater than 24 h. The purpose of this study was to determine whether a relationship exists between the lipophilicity (as measured by the octanol/water partition coefficient, P) of various PAH and the short-term and long-term clearance half-times of PAH in rat lungs. Female F344/Crl rats were administered intratracheally 1 nmol of ^{14}C-labelled anthracene (AN), benz (a) anthracene (BA), 1-nitropyrene (NP), 6-nitrobenzo (a) pyrene (6-NBP), or dibenzo (c, g) carbazole (DBC). At various times after instillation rats were sacrificed and the amount of ^{14}C from rat lungs following instillation of the different PAH was biphasic. In all cases, greater than 85% of the initial dose instilled was cleared with a half-time of less than 1 h. The half-times for clearance of the residual ^{14}C (1-15% of the dose) were 26, 30, 36, 53 and 63 h for AN, NP, 6-NBP, BA and

DCB, respectively. The log of the octanol-water partition coefficients for the different PAH examined ranged from 4.1 (AN) to 6.05 (DBC). Plots of the octanol/water coefficients vs. the long-term clearance half-time for the PAH indicated a linear correlation ($p<0.001$; $r^2=0.96$). The results from this study indicate that the greater the lipophilicity of the PAH, the slower the long-term clearance of a small fraction (1-15%) of PAH from rat lungs. These data suggest that predictions of long-term lung clearance can be made for PAH with log octanol-water partition coefficients between 4 and 6. 29 refs.

38968 **Conformations of DNA adducts with polycyclic aromatic carcinogens.** Broyde, S.; Hingerty, B. (New York Univ., NY). pp 153-171 of Molecular basis of cancer. Part A: macromolecular structure, carcinogens and oncogenes. New York, NY; Alan R. Liss, Inc. (1985). Contract AC02-81ER60015;AC05-84OR21400.

Given the likelihood that a chemical carcinogen initiates cancer via a mutation, attempts were made to try to understand how such mutations are produced. A number of steps take place following the entry of a chemical into a cell, which determine whether or not that substance is mutagenic. These include various pathways of metabolic activation, the reactions of the metabolites with DNA, and the interaction of each of the adducts that are formed with the replication apparatus and various repair systems. The response of the replicative and repair enzymes to each damaging event in DNA is a critical factor in mutagenesis and cell transformation, one which is governed, the authors believe, by the local conformation of the modified DNA. A particular carcinogen may form a number of adducts with DNA, only one of which may be the critical transforming moiety. The authors are interested in learning whether a unique conformation distinguishes mutagenic and carcinogenic lesions from benign ones. Accordingly, attention has been centered on the influence of covalently linked polycyclic aromatic amines and hydrocarbons on DNA conformation. A large number of trial starting conformations, ranging from 500 to 4000 are employed, yielding a satisfactory survey of conformation space for the modified deoxydinucleoside monophosphate. The authors have been studying the dCpdG sequence. They have been investigating adducts with the aromatic amines acetylaminofluorene (AAF) and 4-aminobiphenyl (ABP), as well as the aromatic hydrocarbon benzo[a]pyrene-7,8-diol-9,10-epoxide.

38969 **Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver.** Sunderman, F.W. Jr.; Zaharia, O.; Reid, M.C.; Belliveau, J.F.; O'Leary, G.P. Jr.; Griffin, H. (Univ. of Connecticut, Farmington). *Toxicology;* 32: 11-21(1984).

Concentrations of reduced glutathione (GSH) and oxidized glutathione (GSSG) and 4 trace metals (Ni, Cu, Mn, Zn) were measured in livers from rats treated with sodium diethyldithiocarbamate (DDC, 0.67 or 1.33 mmol/kg, i.m.) and $NiCl_2$ (0.25 or 0.50 mmol/kg, s.c.), singly or in combination. In rats treated with DDC or $NiCl_2$, singly, hepatic GSH was diminished at 4 h and returned to control levels (or slightly above) at 17 h. In rats that received DDC plus $NiCl_2$, hepatic GSH was not diminished at 4 h and was increased 1.4-1.8-fold at 17 h. Hepatic GSSG was diminished at 4 h after $NiCl_2$ treatment and returned to control values at 17 h; hepatic GSSG did not differ from control values at 4 h or 17 h after treatment with DDC, alone or combined with $NiCl_2$. Hepatic Ni was below the detection limit (~20 nmol/g) in control and DDC-treated rats; hepatic Ni was increased to 53 +/- 26 (S.D.) nmol/g at 17 h after treatment with $NiCl_2$ alone, and was increased 6-fold (308 +/- 63 nmol/g) in rats that received Ni plus DDC. Under the same conditions, hepatic Zn was increased 33% or 41%, respectively, in rats that received $NiCl_2$ or DDC, singly, and was not further increased by combined treatment; hepatic Cu and Mn concentrations were unaffected by $NiCl_2$ or DDC, singly, but were diminished in rats that received $NiCl_2$ and DDC. This study suggests: (a) that increased hepatic uptake of Ni is largely responsible for the synergistic induction of heme oxygenase activity in rats treated with $NiCl_2$ and DDC; and (b) that increased hepatic uptake of Zn contributes to the induction of hepatic metallothionein by $NiCl_2$ and DDC. 34 references, 2 tables.

38970 **Effect of ionic interaction of chlorode-borate and iodide-borate on their absorption by Lemna minor L.** Thellier, M.; Ayadi, A.; Tromeur, C. *Comptes Rendus des Seances de l'Academie des Sciences, Serie 3;* 265: 1687-1690(27 Nov 1967). (In French).

The effect of borate ions on the absorption of chloride and iodide ions by Lemna minor was studied by using the radioactive tracers Cl-36 at 23°C with an illumination of 8000 Lux and I-131 at 25.5 C with 600 Lux. The absorbed quantities of the tracer elements were measured with a Geiger counter. The concentrations of sodium chloride solutions tested ranged from 0.055 to 1 mM, those of potassium iodide from 0.04 to 4 mM. While the presence of borate ions in the test solutions of NaCl inhibited the absorption of Cl ions by Lemna minor, only a mild inhibition or none at all was noted in the case of the absorption of I ions. Because of the difference of the cations (sodium in the case of Cl, potassium in the case of I) no direct comparison can be drawn between the absorption of the two halogens. The absorption of I by the plant is thought to proceed by a much simpler mechanism than that of Cl.

38971 **(PB—86-185535/XAB) Circulating antibody response of mice exposed to 9-GHz pulsed microwave radiation.** Liddle, C.G.; Putnam, J.P.; Lewter, O.H.; West, M.; Morrow, G. (Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab.). 1986. 6p. (EPA/600/J—86/023). NTIS, PC A02/MF A01.

Female CD-1 mice immunized against the bacterium Streptococcus pneumoniae type III were exposed to 9-GHz pulsed microwaves (pulse repetition rate 970-1.000, pulse width 1.0 micro seconds, peak power 1 W/cm2) at an average incident power density of 1 mW/sq.cm. (calculated SAR = 0.47 W/kg) for 2 h per day for 5 days. Circulating antibody titers for the microwave-exposed animals were not significantly different from those of the sham-irradiated animals, and there were no differences in any of the hematological parameters analyzed, indicating that 9-GHz pulsed microwaves at 1 mW/sq.cm. do not alter the immune response of mice immunized against S pneumoniae.

38972 **(PB—86-187192/XAB) Effect of 9.6-GHz pulsed microwaves on the orb web spinning ability of the cross spider (Araneus diadematus).** Liddle, C.G.; Putnam, J.P.; Lewter, O.L.; Lewis, J.Y.; Bell, B. (Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab.). 1986. 8p. (EPA/600/J—86/022). NTIS, PC A02/MF A01.

Eight cross spiders (Araneus diadematus) were exposed overnight (16 h) during web-building activity to pulsed 9.6-GHz microwaves at average power densities of 10, 1, and 0.1 mW/sq. cm. (estimated SARs 40, 4, and 0.4 mW/g). Under these conditions, 9.6-GHz pulsed microwaves did not affect the web-spinning ability of the cross spider.

38973 **(PB—86-190113/XAB) Improved technique for monitoring electrocardiograms during exposure to radio-frequency radiation.** Watkinson, W.P.; Gordon, C.J. (Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab.). 1986. 7p. (EPA/600/J—86/033). NTIS, PC A02/MF A01.

Studies were conducted which examined the effects of radio frequency (RF) radiation on heart rate (HR), deep body temperature (TEMP), and electrocardiographic (ECG) waveform parameters in anesthetized rats. One group of animals was exposed to two power levels of continuous wave RF radiation averaging 1.0 and 7.4 W/kg at a frequency of 600 MHz. A second group of animals, treated identically but not exposed to RF radiation, served as a control. The electrodes used to monitor the ECG during RF exposure were fabricated using carbon-loaded Teflon wire, a semiconductor material that does not perturb the RF field. Analyses of the ECG were conducted using a recently developed computer-assisted procedure which quantitates HR and waveform intervals over 25-

40 individual ECG complexes. There were no artifacts or arrhythmias in the ECGs of the animals exposed to RF radiation. There was a significant linear correlation between HR and TEMP in the RF-exposed group which was not present in the control group.

38974 **(PB—86-193695/XAB) Nonelectromagnetic factors influence behavioral effects of microwave exposures.** Gage, M.I. (Environmental Protection Agency, Research Triangle Park, NC (USA). Health Effects Research Lab.). May 1986. 25p. (EPA/600/D—86/098). NTIS, PC A02/MF A01.

Alteration in animal behavior both during and after microwave irradiation is well documented. This report reviews a number of experiments in which specific behavioral effects in laboratory rodents were quantitatively changed by aspects of the exposure such as ambient air temperature, duration of the exposure, and orientation in the field while exposure parameters of 2450 MHz (CW) electromagnetic radiation were kept constant. Operant response rates were reduced and response durations were increased after overnight irradiations with 10 or 15 mW/sq.cm. when ambient air temperature during the exposure was 28 C but not when the temperature was 22 C. Operant behavior of rats, which was reduced by 50% or more after an overnight irradiation, was not reduced after a similar exposure of only 55 min. In another experiment, response rates declined with time after exposures lasting 4 hrs., did not decline further after exposures lasting from 4 to 8 hrs., but did decline further after exposures lasting longer than 8 hrs.

57 HEALTH AND SAFETY

38975 **(GAO/RCED—86-121) Aviation safety. Serious problems concerning the Air Traffic Control work force.** (General Accounting Office, Washington, DC (USA). Resources, Community and Economic Development Div.). Mar 1986. 111p. General Accounting Office, P.O. Box 6015, Gaithersburg, MD 20877. File Number TI86901386.

Report to the Secretary of Transportation.

This report provides the results of an extensive study of the air traffic control work force and includes conclusions and recommendations. The report shows that the Federal Aviation Administration (FAA) has not met its goals for fully qualified (FPL) controllers at many major facilities, and that the growth in air traffic activity as caused controller work load to reach a point where controllers are stretched too thin. Controllers and their supervisors have expressed serious concerns about their ability to continue to maintain the proper margin of safety. We recommend that FAA impose restrictions on air traffic until both the number of FPL controllers and overtime requirements meet FAA's goals. Problems relating to both the number of FPLs and overtime are most acute at the air route traffic control centers and FAA must recognize this in deciding what restrictions to impose.

38976 **(MSHA/IR—1132) Summary of selected injury experience and worktime for the mining industry in the United States, 1931-77.** (Mine Safety and Health Administration, Denver, CO (USA). Health and Safety Analysis Center). 1984. 76p. NTIS, PC A05/MF A01. File Number DE86901497.

This report summarizes the principal injury experience and worktime measures of workers at US mining and milling operations for the period 1931-77. These operations are divided into five categories: coal, metallic minerals, nonmetallic minerals (except stone and coal), stone, and sand and gravel. During that period, the injury-experience indices were based on one million man-hours of exposure.

38977 **(MSHA/IR—1144) Injury experience in metallic mineral mining, 1982.** (Mine Safety and Health Administration, Denver, CO (USA). Health and Safety Analysis Center). 1984. 218p. NTIS, PC A10/MF A01. File Number DE86901512.

This report reviews in detail the occupational injury and illness experience of metallic mineral mining in the United States for 1982. Data reported by operators of mining establishments concerning work injuries are summarized by work location, accident classification, part of body injured, nature of injury, occupation, and principal kind of mineral. Related information on employment, worktime, and operating activity also is presented. For ease of comparison with other metal and nonmetallic mineral mining industries and with coal mining, summary reference tabulations are included at the end of the report.

38978 **(MSHA/IR—1145) Injury experience in nonmetallic mineral mining (except stone and coal), 1982.** (Mine Safety and Health Administration, Denver, CO (USA). Health and Safety Analysis Center). 1984. 262p. NTIS, PC A12/MF A01. File Number DE86901511.

This report reviews in detail the occupational injury and illness experience of nonmetallic mineral mining (except stone and coal) in the United States for 1982. Data reported by operators of mining establishments concerning work injuries are summarized by work location, accident classification, part of body injured, nature of injury, occupation, and principal kind of mineral. Related information on employment, worktime, and operating activity also is presented. For ease of comparison with other metal and nonmetallic mineral industries and with coal mining, summary reference tabulations are included at the end of the report.

38979 **(MSHA/IR—1146) Injury experience in stone mining, 1982.** (Mine Safety and Health Administration, Denver, CO (USA). Health and Safety Analysis Center). 1984. 347p. NTIS, PC A15/MF A01. File Number DE86901513.

This report reviews in detail the occupational injury and illness experience of stone mining in the United States for 1982. Data reported by operators of mining establishments concerning work injuries are summarized by work location, accident classification, part of body injured, nature of injury, occupation, and principal kind of stone. Related information on employment, worktime, and operating activity also is presented. For ease of comparison with other metal and nonmetallic mineral mining industries and with coal mining, summary reference tabulations are included at the end of the report.

38980 **(MSHA/IR—1147) Injury experience in sand and gravel mining, 1982.** (Mine Safety and Health Administration, Denver, CO (USA). Health and Safety Analysis Center). 1984. 72p. NTIS, PC A04/MF A01. File Number DE86901493.

This report reviews in detail the occupational injury and illness experience of sand and gravel mining in the United States for 1982. Data reported by operators of mining establishments concerning work injuries are summarized by work location, accident classification, part of body injured, nature of injury, and occupation. Related information on employment, worktime, and operating activity also is presented. For ease of comparison with coal mining and other metal and nonmetallic mineral mining industries, summary reference tabulations are included at the end of the report.

38981 **(MSHA/IR—1173) Injury experience in stone mining, 1983.** (Mine Safety and Health Administration, Denver, CO (USA). Safety and Health Technology Center). 1985. 434p. NTIS, PC A19/MF A01. File Number DE86901502.

This report reviews in detail the occupational injury and illness experience of stone mining in the United States for 1983. Data reported by operators of mining establishments concerning work injuries are summarized by work location, accident classification, part of body injured, nature of injury, occupation, and principal type of mineral. Related information on employment, worktime, and operating activity also is presented. Data reported by independent contractors performing certain work at mining locations are depicted separately in this report. For ease of comparison with other metal and nonmetallic mineral mining industries and with coal mining, summary reference tabulations are included at the end of both the operator and the contractor sections of this report.

38982 (DOE/SSDC—76-45/27-2nd-Ed.) Accident/incident investigation manual. Second edition. (EG and G Idaho, Inc., Idaho Falls (USA)). Nov 1985. Contract AC07-76ID01570. 190p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE86011838.

A fundamental element in a comprehensive, modern safety program is the thorough investigation of accidents and incidents. This manual provides usable guidelines for investigation of all accidents or incidents, and guidance for preparing for accident management and investigation, appointing investigators and investigative boards, reviewing their activities and reports, and taking action on their findings and recommendations. (ACR)

58 GEOSCIENCES

38983 (DOE/ER—0277) Geosciences projects FY 1985 listing. (USDOE Office of Energy Research, Washington, DC. Office of Program Analysis). May 1986. 179p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE86012461.

This report, which updates the previous working group publication issued in February 1982, contains independent sections: (A) Summary Outline of DOE Geoscience and Related Studies, and (B) Crosscut of DOE Geoscience and Geoscience Related Studies. The FY 1985 funding levels for geoscience and related activities in each of the 11 programs within DOE are presented. The 11 programs fall under six DOE organizations: Energy Research Conservation and Renewable Energy; Fossil Energy; Defense Programs; Environmental, Safety, and Health; and Civilian radioactive Waste. From time to time, there is particular need for special interprogrammatic coordination within certain topical areas. section B of the report is intended to fill this need for a topical categorization of the Department's geoscience and related activities. These topical areas in Solid Earth Geosciences, Atmospheric Geosciences, Ocean Geosciences, Space and Solar/Terrestrial Geosciences, and Hydrological Geosciences are presented in this report.

From International congress on hydrology of rocks of low permeability; Tucson, AZ, USA (7 Jan 1985).

This volume contains papers on numerical and analytical models of mass transport, regional studies, and studies of flow in fractured rocks. Separate abstracts have been prepared for individual papers. (ACR)

38985 (NP—6901446) Alabama Tin Belt. Metallogenesis and mineral resource evaluation. Final report for the 1983-1984 project year. Green, N.L.; Tompa, B.; Gomolka, J.; Wade, G.; Usdansky, S.I. (Alabama Univ., University (USA). Dept. of Geology; Murray State Univ., KY (USA)). Mar 1986. 96p. School of Mines and Energy Development, Univ. of Alabama, Box 6282, University (Tuscaloosa), AL 35486. File Number TI86901446.

The Alabama Tin Belt covers an area of approximately 180 km² within the Tallapoosa lithotectonic block of the Northern Alabama Piedmont. In the second year of this three year project, efforts continued towards detailing the distribution and petrogenesis of tin-bearing peraluminous granitoids in central Coosa County. In particular, mapping, structural analysis and petrographical/petrological studies have been used to examine the geologic settings, geochemical and mineralogical variations, crystallization conditions and nature of source rock(s) of selected granitic plutons and related pegmatite bodies in the vicinity of Rockford, Alabama. Thermobarometeric techniques (a ternary feldspar thermobarometer and a plagioclase-muscovite geothermometer), that could be used in conjunction with compositions of constituent minerals to yield reasonable estmates of granite crystallization and alteration temperatures, were also developed. Preliminary results provide evidence that: (1) the granitoids possess characteristics possibly derived from both sedimentary (S-type) and igneous (I-type) sources; (2) feldspars of the tin-bearing pegmatites possess extremely high Rb and Cs concentrations; (3) the peraluminous granitoids crystallized under varying oxygen fugacity conditions at temperatures of 510 to 710° and pressures greater than 6 kbar; and, (4) the Rockford Pluton occupies the core of a post-D_1, antiformal structure that is overturned to the northwest.

38986 (CEA-CONF—8169) Test of SEISPACE seismological DCPs in Ubaye (French Alps). Poupinet, G.; Bresson, A.; Goula, X.; Coutant, O. (CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. d'Analyse de Surete). May 1985. 12p. (CONF-8505286—1; DAS—171). NTIS (US Sales Only), PC A02/MF A01. File Number DE86752447.

From 10. ARGUS conference; Kiel, F.R. Germany (22 May 1985).

A seismological equipment transmitting selected parts of seismograms through ARGOS or METEOSAT has been built. The purpose is to deploy seismological networks for several months in remote and difficult access areas. In seismotectonic and teleseismic studies or for the evaluation of seismic risks, seismicity has to be monitored for long periods of time. This is usually costly in maintenance and data processing. We present an instrument designed to simplify seismological data collection and processing for customary applications. In designing this instrument we rely on the experience acquired in the use of ARGOS for the location of earthquakes on Etna with an analog picker (Poupinet and Glot, 1982, 1983). A test of two DCP installed in a mountainous region during the winter 1984-1985 is presented.

38987 (LA—10706-MS) Detection and evaluation of structural rock damage in the overburden at an underground base. Acoustic transmission method. Bradley, C.R. (Los Alamos National Lab., NM (USA)). Apr 1986. Contract W-7405-ENG-36. 38p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86011742.

A system is proposed to assess blast damage to the rock overlying an underground base. The system consists of vertical wellbores that contain acoustic transceivers and that penetrate potential locations for completion of egress tunnel construction. In this system compressional and shear wave signals are transmitted through the rock between wellbores, and the travel time of the signals is measured. From these measurements, a two-dimensional representation of selected rock properties can be obtained through direct inversion or algebraic tomographic methods. In this report we describe a simplified inversion theory as it relates to transmission acoustics and present two methods for inverting the travel-time data: (1) direct inversion and (2) algebraic reconstruction. We applied the Algebraic Reconstruction Technique (ART) and the Simultaneous Iterative Reconstruction Technique (SIRT), both methods of algebraic reconstruction, to the damage assessment model. The SIRT algorithm was more stable in the presence of measurement uncertainties.

38988 (N—86-20997) Geomagnetic main field modeling using magnetohydrodynamic constraints. Estes, R.H. (Business and Technological Systems, Inc., Seabrook, MD (USA)). Nov 1985. 33p. (NASA-CR—177849; REPT—1080). NTIS, PC A03/MF A01.

The influence of physical constraints which may be approximately satisfied by the Earth's liquid core, are investigated. A previous report describes the methodology used to incorporate nonlinear equations of constraint into the main field model. The application of that methodology to the GSFC 12/83 field model to test the frozen-flux hypothesis and the usefulness of incorporating magnetohydrodynamic constraints for obtaining improved geomagnetic field models are described.

38989 (NUREG/CR—3150) Seismicity and tectonic relationships for Upper Great Lakes Precambrian Shield Province. Final report, July 1981-December 1982. Mooney, H.; Walton, M. (Minnesota Univ., Minneapolis (USA)). Jun 1986. 53p. NTIS, PC A04/MF A01 - GPO. File Number TI86901522.

The Central Minnesota Seismic Array operated from 1 January 1977 to 14 July 1982. The intent of the investigation was to provide a seismicity data base for the Upper Great Lakes Precambrian Shield Province. The results of the investigation are presented as a table listing parameters for 16 earthquakes. The epicenter locations are shown on a tectonic map.

38990 (NUREG/CR—4609) Effects of earthquakes on underground facilities. Literature review and discussion. Carpenter, D.W.; Chung, D.H. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 61p. (UCID—20505). NTIS, PC A04/MF A01 - GPO. File Number TI86012649.

A review of literature concerning effects of ground motion on underground facilities has been completed, and an annotated bibliography has been prepared. This information provides useful background for the science and engineering of underground nuclear waste management facility development. While some conflicts are evident in the literature reviewed, the following tentative conclusions may be drawn from the available information: (1) damage is expectable if fault displacement occurs through a site, but damage from shaking alone is generally confined to facilities located within the epicentral region and may be less than to surface facilities at the same site. (2) Seismic data are mixed, but favors reduction of amplitude with depth; observations appear quite dependent upon station characteristics. (3) The frequency content of earthquake mitions is important to the stability of underground openings and the applicability of attenuation relationships developed in areas where geologic and tectonic characteristics favor high attenuation rates to mid-continental sites is questionable. (4) Model studies indicate problems for shafts and the potential for problems with waste-handling equipment in shafts. The results of the review indicate the need to assure that site-specific response spectra and attenuation relationships are developed for proposed sites, and that detailed assessments of seismic aspects of shaft designs, hoists and in-shaft waste-handling equipment are required.

38991 (NUREG/CR—4632) New Madrid Seismotectonic Program. Final report. Buschbach, T.C. (Saint Louis Univ., MO (USA)). Jun 1986. 73p. NTIS, PC A04/MF A01 - GPO. File Number TI86901521.

The New Madrid Seismotectonic Program was a large-scale multidisciplinary effort that was designed to define the structural setting and tectonic history of the New Madrid area in order to realistically evaluate earthquake risks in the siting of nuclear facilities. The tectonic model proposed to explain the New Madrid seismicity is the "zone of weakness" model, which suggests that an ancient rift complex formed a zone of weakness in the earth's crust along which regional stresses are relieved. The Reelfoot Rift portion of the proposed rift complex is currently seismically active, and it must be considered capable and likely to be exposed to large-magnitude earthquakes in the future. Earthquakes that occur in the Wabash Valley area are less abundant and generally have deeper hypocenters than earthquakes in the New Madrid area. The area of the Southern Indiana Arm must be considered to have seismic risk, although a lesser extent than the Reelfoot Rift. The east-west trending Rough Creek Graben is practically aseismic, probably in large part due to its orientation in the current stress field. The northwest-trending St. Louis Arm of the proposed rift complex includes a pattern of seismicity that extends from southern Illinois along the Mississippi River. This arm must be considered to have seismic risk, but because of the lack of development of a graben associated with the arm and the orientation of the arm in the current stress field, the risk appears to be less than in the Reelfoot Rift portion of the rift complex.

38992 (PB—86-189453/XAB) Investigation of radon and helium as possible fluid-phase precursors to earthquakes. Technical report. Chung, Y.; Craig, H. (Scripps Institution of Oceanography, La Jolla, CA (USA)). Apr 1986. 54p. (SIO-REF—86-12). NTIS, PC A04/MF A01.

The final technical report represents the radon data obtained from three sites with USC Continuous Radon Monitors (CRM's), and the new discrete data on radon and helium in the liquid phase from the current S. California network sites for the period October, 1984 to November, 1985. The monitoring network of hot springs and thermal wells was established along the Elsinore, San Jacinto, and San Andreas faults between San Bernardino and the Mexican border since 1974. Water samples from the network sites were measured at monthly intervals during the report period.

38993 (SAND—86-0629) Geoscience Research Drilling Office Operations I: the North INYO Drilling Program, 1984. Lysne, P. (Sandia National Labs., Albuquerque, NM (USA)). May 1986. Contract AC04-76DP00789. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012041.

The North Inyo Drilling Program was part of the Continental Scientific Drilling Program/Thermal Regimes and it was put forth by the Department of Energy/Office of Basic Energy Sciences to explore roots of a 600 year old volcanic system which is found in the north-west corner of Long Valley Caldera, California. The responsibility of the Geoscience Research Drilling Office was to provide logistical support to the scientific drilling team. This support consisted of obtaining the necessary permits, obtaining a drilling contract and providing field services involving logging and core handling/laboratory facilities. The first portion of this program was successful when hole RDO-2b traversed the conduit which fed Obsidian Dome; the second portion succeeded when RDO-3a traversed the dike underlying the Inyo Chain of volcanoes.

38994 (SAND—86-0938C) First 1.5 years with the Norwegian Regional Seismic Array, October 1984-March 1986. Breding, D.R. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 25p. (CONF-8604196—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010097.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

This presentation details Sandia National Laboratories' operational experience with the Norwegian Regional Seismic Array (NRSA) over its first 1.5 years. It outlines the events that are important to those that use the NRSA data. These events include when and where data was recorded and array changes that affect the user. In addition, statistics on data outages ad data availability will be presented.

38995 Recent experiments using geophysical tomography in fractured granite. Ramirez, A.L. (Lawrence Livermore Lab., Livermore). *Proceedings of the IEEE (Institute of Electrical and Electronics Engineers);* 74: No. 2, vp(Feb 1986). Contract W-7405-ENG-48.

This paper provides overviews of recent field experiments where the geophysical tomography method was used to investigate fractures between boreholes and an overview of factors pertinent to accuracy, resolution, and data interpretation. High-frequency electromagnetic waves (5-40 MHz) were used in the field to investigate a fractured granitic rock mass between boreholes separated by up to 30 m. Geophysical tomography images were reconstructed and compared with borehole geophysical data and hydraulic conductivity data. These comparisons suggest that the images are useful in identifying regions in the granite having a high moisture content due to fracture zones. A new technique involving the use of salt-water tracers to delineate fluid flow through fractures has been preliminarily evaluated. Image anomalies created by the tracer can be correlated with fracture data. This technique requires further evaluation because available fracture data are insufficient to delineate flow paths independently. When fractures are sampled from two boreholes, the resolution of the method is a function of the height-to-width ratio of the area investigated, the fracture location within this area, and the orientation of the fractures. The ratio of displacement to conduction currents, the variability of the refractive index in the rock, and the separation between transmitter and receiver are also important parameters affecting imaging results.

38996 **Effects of contact area of an interface on acoustic wave transmission characteristics.** Myer, L.R.; Hopkins, D.; Cook, N.G.W. (Lawrence Berkeley Lab., CA). pp 565-572 of Research and engineering applications in rock masses. Volume 1. Ashworth, E. Accord, MA; A.A. Balkema Pub. (1985). (CONF-850671—). Contract AC03-76SF00098.

From 26. U.S. symposium on rock mechanics; Rapid City, SD, USA (26 Jun 1985).

Attenuation and dispersions of waves are attributed to energy losses caused by mechanisms such as frictional sliding between areas of contact in fractures, and viscosity and flow of fluid in pores and fractures (Johnston et al. 1979, White 1983). Energy loss by these mechanisms has been accounted for in theoretical models by defining a complex material modulus (O'Connell and Budiansky 1977, Kjartansson 1979). Models predicting apparent attenuation due to scattering of seismic waves by cracks or fractures have been proposed by Yamakawa (1962) and Hudson (1981). This paper discusses a new model in which attenuation as well as group velocity changes are explained by a single set of assumptions. The basis of this model is that a joint or fracture represents a displacement discontinuity across which average stresses in seismic waves are continuous but displacements are not. The model is linear elastic so that all material properties are real valued. It is applicable to cases in which the fractures are large in extent but small in thickness compared to the wavelength of the seismic waves. Laboratory experiments were performed in which a single fracture was represented by an interface between two steel cylinders. Measured attenuation of compressional (P) and polarized shear (S) waves was compared with model predictions.

38997 **Electrode configuration influence on resistivity measurements about a spherical anomaly.** Lytle, R.J.; Hanson, J.M. (Lawrence Livermore National Lab., CA). *Geophysics;* 48: No. 8, 1113-1119(Aug 1983). Contract W-7405-ENG-48.

The trade-offs involved with subsurface resistivity probing are studied for the case of a spherical anomaly. In particular, two-, three-, and four-electrode configurations are investigated. The three- and four-electrode configurations have similar results and have significantly better remote detection capabilities than does a two-electrode configuration. Cross-borehole probing is capable of detecting anomalous conditions at a greater range than is single-borehole probing.

38998 **(BMI/ONWI—573(1)) Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 1.** Bush, D.D.; Piele, S. (Terra Tek, Inc., Salt Lake City, UT (USA)). May 1986. Contract AC02-83CH10140. 149p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE86012040.

A full-scale borehole sealing test was conducted in Avery Island diapiric salt. The test was performed under simulated in situ stress (15.86 MPa [2300 psi]) and temperature (30°C) of a theoretical salt nuclear waste repository. To evaluate the sealing performance and the effect of the grout on the salt, temperature and pressure versus time histories of the grout were measured during the 28-day curing period and subsequent full-scale flow tests. Post-test microscopic tests, physical properties tests, and laboratory permeability tests were conducted on the grout and host rock. Data indicate the grout exothermic reaction was low (<5°C) with the expansive stresses in the grout exceeding 11.0 MPa (1595 psi) near the center and 24.8 MPa (3600 psi) at the grout/salt interface. The full-scale flow test conducted over 91 hours resulted in a non-steady-state flow, decreasing with time to approximately 10^{-6} darcys. Megascopic and microscopic examinations revealed fluid flow along a small area of the grout/salt interface and through adjacent salt. Laboratory data show a salt permeability in the order of 10^{-5} and grout at 10^{-6} darcys. Physical and permeability data indicate the salt has anisotropic properties.

38999 **(BMI/ONWI—573(2)) Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2.** Scheetz, B.E.; Licastro, P.H.; Roy, D.M. (Pennsylvania State Univ., University Park (USA). Materials Research Lab.). May 1986. Contract AC02-83CH10140. 79p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86012003.

Large-scale testing of the permeability by brine of a salt/grout sample designed to simulate a borehole plug was conducted. The results of these tests showed that a quantity of fluid equivalent to a permeability of 3 microdarcys was collected during the course of the test. This flow rate was used to estimate the smooth bore aperture. Details of this test ware presented in Volume 1 of this report. This report, Volume 2, covers post-test characterization including a detailed study of the salt/grout interface, as well as determination of the physical/mechanical properties of grout samples molded at Terra Tek, Inc. at the time of the large-scale test. Additional studies include heat of hydration, radial stress, and longitudinal volume changes for an equivalent grout mixture.

39000 **(BMI/ONWI—581(1)) Full-scale borehole sealing test in anhydrite under simulated downhole conditions. Volume 1.** Bush, D.D.; Lingle, R. (Terra Tek, Inc., Salt Lake City, UT (USA)). May 1986. Contract AC02-83CH10140. 82p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86012073.

A full-scale borehole sealing test was conducted in anhydrite. The test was performed under the simulated in situ stress (4.83 MPa [700 psi] and temperature (30°C) of a theoretical deposit overlying a nuclear waste repository. The borehole sealing material was an expansive grout formulated by the US Army Engineer Waterways Experiment Station, Vicksburg, Mississippi, under contract to the US Department of Energy. To evaluate and better understand the expansive nature of the grout, in situ pressure and temperature versus time histories were measured during the 29-day curing period and subsequent full-scale flow tests. Post-test microscopic and laboratory permeability tests were conducted on the grout and anhydrite. Data indicate the grout exothermic reaction was low (6°C), with the expansive stresses approaching 2.55 MPa (370 psi) near the center, and 3.8 MPa (551 psi) at the interface, prior to transducer failure on day 17. The full-scale flow test conducted at the conclusion of the 29-day curing period resulted in large-scale flow. Megascopic post-test examination of the grout revealed channeling and apparent dissolution at the grout-anhydrite interface. Microscopic examination revealed voids within the grout, with laboratory tests showing a permeability of 10^{-6} darcys. Numerous fractures were evident in the anhydrite.

39001 **(BMI/ONWI—581(2)) Full-scale borehole sealing test in anhydrite under simulated downhole conditions. Volume 2.** Scheetz, B.E.; Licastro, P.H.; Roy, D.M. (Pennsylvania State Univ., University Park (USA). Materials Research Lab.). May 1986. Contract AC02-83CH10140. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86012074.

The large bench-scale permeability testing of anhydrite rock and a grout designed to act as a seal in contact with this rock was conducted at the Terra Tek, Inc. research facility in Salt Lake City, Utah. Pressurized flow of a dye-marked fluid from the borehole cavity of the test specimen was recorded at 45 psi (0.31 MPa) differential head pressure. Test parameters were altered and the flow recorded for differential pressures varying up to about 125 psi (0.86 MPa) in 25 psi (0.17 MPa) intervals with a constant confining pressure. In all cases, the fluid flow was observed to increase. The dimensions of the test specimen and test conditions correspond to an observed permeability of between 0.84 and 1.5 millidarcys, based upon the grout plug area. Post-test examination of the rock/grout core indicated that the flow was principally interfacial flow. However, marked flow paths within the grout were also noted. The development of numerous heavily dye-marked "washout" regions in the grout at the interface suggests that these channels acted as the main conduits for fluid flow from the borehole. A tentative explanation for the development of the large conduits was the formation of bubble trains in the paste. Similar behavior was observed in a laboratory-scale grout formulation at the Pennsylvania State University that approximated the rheologic properties and composition

of the tested grout, TT84A. The performance of the melamine-based superplasticizer used in the formulation is questioned regarding its sealing ability in anhydrite.

39002 **(BMI/ONWI—598) Salt dissolution and collapse at the Wink Sink in West Texas.** Johnson, K.S. (Battelle Memorial Inst., Columbus, OH (USA). Office of Nuclear Waste Isolation). Jun 1986. Contract AC02-83CH10140. 96p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86012245.

The Wink Sink, in Winkler County, Texas, is a collapse feature that formed in June 1980 when an underground dissolution cavity migrated upward by successive roof failures until it breached the land surface. The original cavity developed in the Permian Salado Formation salt beds more than 1300 feet below ground level. Natural dissolution of salt occurred in the vicinity of the Wink Sink in several episodes that began as early as Salado time and recurred in later Permian, Triassic, and Cenozoic time. Although natural dissolution cavity and resultant collapse were influenced by petroleum production activity in the immediate area. Drilling, completion, and plugging procedures used on an abandoned oil well at the site of the sink appear to have created a conduit that enabled water to circulate down the borehole and dissolve the salt. When the dissolution cavity became large enough, the roof failed and the overlying rocks collapsed into the cavity. Similar collapse features exist where underground salt beds have been intentionally dissolved during solution mining or accidentally dissolved as a result of petroleum production activities.

39003 **(NP—6770110) Establishment of core laboratory competence. Triaxial tests at reservoir pressure. Relative permeability. Standard core laboratory tests.** (Geoteknisk Inst., Lyngby (Denmark); Danmarks Geologiske Undersoegelske, Copenhagen). Sep 1985. 190p. (In Danish). NTIS (US Sales Only), PC A09/MF A01. File Number DE86770110.

Items within the scope of EDB have been entered individually into the data base. (ACR)

39004 **(NUREG/CR—4641) Experimental assessment of borehole wall drilling damage in basaltic rocks.** Fuenkajorn, K.; Daemen, J.J.K. (Arizona Univ., Tucson (USA). Dept. of Mining and Geological Engineering). Jun 1986. 287p. NTIS, PC A13/MF A01 - GPO. File Number TI86901531.

Ring tension tests, permeability tests, and microscopic fracture studies have been performed to investigate the borehole damage induced at low confining pressure by three drilling techniques (diamond, percussion and rotary). Specimens are drilled with three hole sizes (38, 76, and 102 mm diameter) in Pomona basalt and Grande basaltic andesite. The damaged zone is characterized in terms of fractures and fracture patterns around the hole, and in terms of tensile strength reduction of the rock around the holes. Experimental results show that the thickness of the damaged zone around the hole ranges from 0.0 to 1.7 mm. A larger drill bit induces more wall damage than does a smaller one. Different drilling techniques show different damage characteristics (intensity and distribution). Damage characteristics are governed not only by drilling parameters (bit size, weight on bit, rotational speed, diamond radius, and energy), but also by properties of the rock. The weaker rock tends to show more intense damage than does the stronger one. Cracks within grains or cleavage fractures are predominant in slightly coarser grained rock (larger than 0.5 mm grain size) while intergranular cracks are predominant in very fine grained rock (smaller than 0.01 mm grain size). The damaged zones play no significant role in the flow path around a borehole plug.

39005 **(PNL-SA—13816) Coupled mechanical-hydrological methodology for modeling flow in jointed rock masses using laboratory data for the joint flow model.** Voss, C.F.; Bastian, R.J.; Shotwell, L.R. (Pacific Northwest Labs., Richland, WA (USA)). Feb 1986. Contract AC06-76RL01830. 5p. (CONF-860609—16). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012332.

From 27. U.S. symposium on rock mechanics; Tuscaloosa, AL, USA (23 Jun 1986).

Pacific Northwest Laboratory (PNL) currently supports the US Department of Energy's Office of Civilian Radioactive Waste Management in developing and evaluating analytical methods for assessing the suitability of sites for geologic disposal of high-level radioactive waste. The research includes consideration of hydrological, geomechanical, geochemical, and waste package components and the evaluation of the degree of coupling that can occur between two or more of these components. The PNL effort and those of other research groups investing potential waste sites in the US and abroad are producing a suite of computer codes to analyze the long-term performance of the proposed repository sites. This paper summarizes the ongoing research in rock mechanics at PNL involving flow through jointed rock. The objective of this research is to develop a methodology for modeling the coupled mechanical-hydrological process of flow through joints and then attempt to validate a "simple" model using small-scale laboratory test data as a basis for judging whether the approach has merit. This paper discusses the laboratory tests being conducted to develop a joint behavioral constitutive model for the numerical method under development and the modeling approach being considered.

39006 **(SAND—84-2620) G-tunnel heated block experiment. Final report.** Zimmerman, R.M.; Schuch, R.L.; Mason, D.S.; Wilson, M.L.; Hall, M.E.; Board, M.P.; Bellman, R.P.; Blanford, M.P. (Sandia National Labs., Albuquerque, NM (USA); EG and G, Inc., Las Vegas, NV (USA); Science Applications International Corp., Las Vegas, NV (USA); RE/SPEC, Inc., Albuquerque, NM (USA)). May 1986. Contract AC04-76DP00789. 412p. NTIS, PC A18/MF A01; 1; GPO Dep. File Number DE86011768.

A heated block experiment was conducted in G-Tunnel on the Nevada Test Site (NTS) to provide input for evaluating the ability of jointed-welded tuffs to contain radioactive wastes. The Nevada Nuclear Waste Storage Investigations Project is investigating the possibility of constructing a high-level nuclear waste repository within similar tuff at Yucca Mountain on and adjacent to the NTS. The heated block experiment included tests to evaluate the behavior of tuff under higher than ambient stresses and temperatures. Field data were collected on thermal, mechanical, thermomechanical, and hydrologic properties of tuff. The experiment, together with laboratory tests on tuff, provides information that increases the levels of confidence and accuracy when extrapolations are made to a full-scale repository.

39007 **(SAND—86-1034C) Stress measurements in rock salt using hydraulic fracturing.** Wawersik, W.R.; Stone, C.M. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 13p. (CONF-8604199—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010096.

From Spring meeting on hydrofracture tests of US salt; Baton Rouge, LA, USA (20 Apr 1986).

Hydraulic fracturing was applied in horizontal drillholes in the Salado salt formation near Carlsbad, New Mexico. Testing took place approximately 650 m below surface in order to support the design of a Waste Isolation Pilot Plant (WIPP) for the disposal of radioactive waste from defense activities of the United States. Hydraulic fracturing was performed primarily to determine whether the virgin in situ stress state at the WIPP site is isotropic and whether the magnitudes of the the virgin in situ stresses correspond to the weight of the overburden. Beyond these limited objectives, measurements are being analyzed to evaluate the usefulness of hydraulic fracturing in salt formations in general. Such measurements are desirable to determine stresses induced by mining and to monitor time-dependent stress changes around underground excavations in salt masses. Hydraulic fracturing measurements are also relevant to the evaluation of allowable pressures before fracturing is induced in pressurized boreholes and storage caverns.

39008 **(UCRL—53721) Variation in properties of nuclear test areas and media at the Nevada Test Site.** Howard, N.W. (Lawrence Livermore National Lab., CA (USA)). 15 Sep 1985. Contract W-7405-ENG-48. 49p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86012104.

Data have gradually been accumulating on the physical properties of nuclear test sites at the US Department of Energy's (DOE) Nevada Test Site (NTS) since underground testing began

there in 1957. These data have been stored in the Lawrence Livermore National Laboratory (LLNL) Containment Program's Test Effects and Geologic Data Bank. This report briefly describes the principal test areas (Yucca Flat, Frenchman Flat, Pahute Mesa, Climax Stock, and Rainier Mesa) and media (alluvium, tuff, rhyolite lavas, granite, and carbonate rocks) at the NTS. The data base and the various methods used to measure geophysical parameters at the NTS are described. The mean, standard deviation, and range of values for each test area and medium are given. However, this report does not contain specific properties for individual sites. Properties for which averages are listed include bulk density, seismic velocity, and gas-filled porosity, both near the working point (WP) and from the WP to the surface; and grain density, water content, porosity, water saturation, and CO_2 content of the rocks in the WP vicinity.

39009 **The kinematics of block interpenetrations.** Shi, G.; Goodman, R.E.; Tinucci, J.P. (Univ. of California, Berkeley; Lawrence Berkeley Labs., CA). pp 121-130 of Research and engineering applications in rock masses. Volume 1. Ashworth, E. Accord, MA; A.A. Balkema Pub. (1985). (CONF-850671—).

From 26. U.S. symposium on rock mechanics; Rapid City, SD, USA (26 Jun 1985).

In 1968 joint elements were introduced in finite element analyses (1) to represent the contribution of discontinuities in the mechanical behavior of rock systems. After some initial studies it became obvious that a series of constraints would have to be introduced on the deformations and stresses in the joint elements to prevent one block from interpenetrating another, to avoid the accumulation of tensile stresses between blocks, and to limit the shear stresses along joints to tolerable values. These additions permitted sophisticated computations of stresses and strains in jointed rocks, with some numerical difficulties, and in well-posed problems valuable results have been obtained. Subsequently, workers in other fields applied similar algorithms to computation of interfaces between dissimilar materials in both static and dynamic problems. Interface constraints have been used by workers employing finite difference, discrete element, and finite element methods. Recently the authors introduced a method called "discontinuous deformation analysis" (2) for backcalculation of deformational modes in blocky rock systems when one is given the displacements of a sufficient set of points. The examples of that paper employed a more thorough approach for meeting the constraints required for nonpenetration of blocks; and the success achieved using this method in complexly jointed systems led us to generalize the equations and procedures so that they might be introduced in finite element, finite difference, and discrete element computations as well. This paper is written to present these general formulations.

39010 **Calculation of laboratory stress-strain behavior using a compliant joint model.** Labreche, D.A. (RE/SPEC Inc., Albuquerque, NM). pp 515-522 of Research and engineering applications in rock masses. Volume 1. Ashworth, E. Accord, MA; A.A. Balkema Pub. (1985). (CONF-850671—).

From 26. U.S. symposium on rock mechanics; Rapid City, SD, USA (26 Jun 1985).

Numerous models of the discontinuities within a rock mass have been developed in attempts to simulate their mechanical effects. These models fall into two categories: discontinuous models and continuum models, each with its advantages and disadvantages under particular applications. The discontinuous models are those that explicitly model individual discontinuities (faults, joints, etc.), e.g., Goodman, et al [1968], and Ghaboussi, et al [1973]. Continuum models are those which simulate some effects of discontinuities within a portion or all of the problem domain without modeling the discontinuity itself. A continuum-type compliant joint model was developed so that joints can be spread throughout the volume of interest, and aperture changes can be monitored. Validation ensures that the mathematical field theory embodied in a computer code is a correct representation of the phenomena it simulates. The validation process includes comparing calculations with measurements and observations made during field and laboratory studies. This paper presents a brief description of the compliant joint model, a description of laboratory experiments used for this validation, the numerical idealization of those experiments, and the calculated results that complete this preliminary validation analysis. An evaluation of observed differences is made.

39011 **Measurement and calculation of the mechanical response of a highly fractured rock.** Bauer, S.J.; Thomas, R.K.; Ford, L.M. (US Dept. of Energy Facility, Sandia National Labs., Albuquerque, NM). pp 523-530 of Research and engineering applications in rock masses. Volume 1. Ashworth, E. Accord, MA; A.A. Balkema Pub. (1985). (CONF-850671—). Contract AC04-76DP00789.

From 26. U.S. symposium on rock mechanics; Rapid City, SD, USA (26 Jun 1985).

The authors have completed the first steps in attempting to validate a material constitutive model for a jointed rock mass. The continuum model (Thomas, 1981), as utilized here within a finite element code, consists of a material constitutive description based on the linear elastic behavior of the matrix material and nonlinear normal and shear behavior of fracture planes. The validation exercise consists of (1) characterizing an appropriate physical model, (2) measuring the mechanical response of that model, and (3) using the physical model characteristics to calculate the mechanical response of the physical model. Calculated and measured responses for small-scale physical models (thermally-fractured granite [Bauer, 1980]) are in qualitative agreement. For deviatoric loadings, the calculated tangent modulus is an order of magnitude less than that of the matrix and exhibits stiffening with increasing a load, and thereby functionally tracks the measured response.

39012 **(SAND—86-0237C) Micro-Raman spectroscopy of fluid inclusions in a hopper crystal in halite.** Higgins, K.L.; Stein, C.L. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 13p. (CONF-860829—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86007628.

From Annual joint meeting of the Electron Microscopy of America and the Microbeam Analysis Society; Albuquerque, NM, USA (10 Aug 1986).

Raman microscopy has been used successfully to analyze for dissolved sulfate in fluid inclusions in naturally occurring halite. Hopper crystals are crystals of halite (NaCl) whose structure is produced by crystal growth at the surface of a brine reservoir. Brine is trapped by defects in the growing crystal faces as microscopic fluid inclusions. In this study the hopper crystal was characterized by obtaining a profile of the sulfate (SO_4^{2-}) concentrations in brine inclusions in the bands formed in the hopper crystal structure. In addition, the same sample contained large areas of clear recrystallized halite in which fluid inclusions are not as abundant as those in hopper crystals but are several orders of magnitude larger (frequently several mm on an edge). These larger inclusions were also analyzed for their sulfate content. The sample for this study came from a thick halite unit in the Salado Formation (Permian age) in the Delaware Basin, southeastern New Mexico. The Waste Isolation Pilot Plant (WIPP) is located at a depth of approximately 2150 feet from the surface.

REFER ALSO TO CITATION(S) 37627, 38916, 38917, 38918, 38919

39013 **(SAND—85-7226) Data report on sediment cores collected on cruise W8209-B, Pacific study area W-N.** Heath, G.R.; Lopez, C. (Oregon State Univ., Corvallis (USA). Coll. of Oceanography). May 1986. Contract AC04-76DP00789. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86011823.

Sediment cores from area W-N (centered at 39° 20' N, 127° 35' W) collected during cruise W8209B, in September 1982, supplement the coverage obtained during the earlier Low-Level Waste Ocean Disposal Program cruises TT-141 (OSU-8) and W8103A (OSU-18). As before, the cores in W-N are cohesive clays, silty

clays and clayey silts. The brown (surficial) to gray green (deeper) color change, indicative of Fe^{+3} to Fe^{+2} reduction by organic matter, increases in depth from less than 10 cm in the eastern half of the area to more than 40 cm to the west. In a core collected about 50 km west of W-N, the boundary lies below 2 m, indicating the increasingly oxidized condition of the sediment towards the central North Pacific gyre due to reduced organic influx and a slower sedimentation rate.

39014 (SAND—85-7232) Acoustic structure and echo character of surficial sediments of the northern Hatteras Abyssal Plain. McCreery, C.J.; Laine, E.P. (Rhode Island Univ., Narragansett (USA)). May 1986. Contract AC04-76DP00789. 120p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE86011959.

A study has been made of the high frequency acoustic response of abyssal plain depositional facies. Piston cores have been obtained at six stations and deep hydrophone recordings at three stations on the northern Hatteras Abyssal Plain. 3.5 kHz seismic profiles indicate acoustically transparent lobes of surficial sediment which thicken towards the Hatteral Transverse Canyon and Sohm Gap/Wilmington Fan. Physical property data from piston cores indicate a higher percentage of coarse sediment in the areas of transparent acoustic response. Many of the characteristics normally used in mapping of conventional 3.5 kHz profiler acoustic response varied only slightly in the study area. Regions of diffuse 3.5 kHz surface echoes, similar to prolonged echoes attributed to high percent sand beds, have been identified in the study area. High trace to trace variation in deep hydrophone/pinger recordings in these areas suggests that the diffuse echo returns are due to unresolved microtopography and are not necessarily associated with a sandy seafloor.

39015 (SAND—85-7233) Late Quarternary evolution of the northern Hatteras Abyssal Plain. Dickson, S.M.; Laine, E.P. (Rhode Island Univ., Narragansett (USA)). May 1986. Contract AC04-76DP00789. 180p. NTIS, PC A09/MF A01; GPO Dep. File Number DE86011961.

The sedimentary history and seismic structure of a deep-water turbidite basin in the Western North Atlantic Ocean has been investigated to understand further the evolution of abyssal plains. This study integrates analyses of sedimentary and seismic facies in order to examine the temporal and spatial patterns of sedimentation on the northern Hatteras Abyssal Plain during the Late Quaternary. Forty deep-sea sediment cores and 6000 km of high resolution (3.5 kHz) seismic reflection profiles from within 31-34°N and 69-74°W include portions of the Hatteras Outer Ridge, Lower Continental Rise and Bermuda Rise as well as the northern Hatteras Abyssal Plain. Seismic profiles (within 32-33°N, 70-71.5°W) define two acoustically-transparent seismic units beneath the Plain. The composition of these seismic units has been investigated with sediment cores. This study has found two notable features in the sedimentary framework of the Plain that appear to have resulted from temporal changes in sediment supply. The most recent change, a postglacial decline in turbidity current activity, produced a diagenetic iron enrichment at the Pleistocene-Holocene boundary. The stratigraphic thickness affected by diagenesis is related spatially to patterns of turbidite sedimentation. An earlier change, discovered in this research, occurred during the Wisconsinian glaciation and brought coarser-grained turbidity currents to the northern Plain. Deposition of sands from these flows appears to have been locally controlled by a broad topographic feature with less than ten meters relief. As a result of the topographic influence, there are abrupt boundaries, both verically and laterally, between an older mud facies and a younger sandy turbidite facies of the Plain.

39016 Pycnocline development and its consequences in the Middle Atlantic Bight. Aikman, F. III. (Columbia Univ., New York, NY). *Journal of Geophysical Research;* **89**: No. C1, 685-694(20 Jan 1984).

Seasonal pycnocline development in the shelf and slope waters of the Middle Atlantic Bight is investigated numerically using a one-dimensional, two-layer, bulk-mixing model. The model considers the buoyancy budget of the system and includes both turbulent diffusion and entrainment across the pycnocline that separates the layers as well as as a parameterization for mixed-layed shallowing. Climatic estimates of the surface buoyancy and energy inputs drive the model. The shelf and slope water regimes, however, experience different inputs: freshening, due to river runoff, and a larger net heat gain, due to a more positive air-sea temperature difference, both contribute to a larger buoyancy input to the shelf water regime; and the wind stress is larger over the slope. Numerical computation of vernal pycnocline development results in the formation of a shelf water pycnocline that is both shallower and more intense than that over the slope. A consequence of this mismatch is a reversal of the offshore density gradient at intermediate depths and an intrusion of slope water into the shelf water pycnocline, called the pycnocline salinity maximum. It is possible that interannual variations in the timing and magnitude of the heating and freshwater input from rivers can cause concomitant variations in salt input via the pycnocline salinity maximum. 37 references, 11 figures, 2 tables.

39017 (FNAL/Pub—86/69-A) Yet another possible explanation of the solar-neutrino puzzle. Kolb, E.W.; Turner, M.S.; Walker, T.P. (Fermi National Accelerator Lab., Batavia, IL (USA)). Apr 1986. Contract AC02-76CH03000. 13p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86012306.

Mikheyev and Smirnov have shown that the interactions of neutrinos with matter can result in the conversion of electron neutrinos produced in the center of the sun to muon neutrinos. Bethe has exploited this and has pointed out that the solar-neutrino puzzle can be resolved if the mass difference squared of the two neutrinos is $m_2^2 - m_1^2 \simeq 6 \times 10^{-5}$ eV^2, and the mixing angle satisfies sin θ/sub v/ > 0.0065. We discuss a qualitatively different solution to the solar-neutrino puzzle which requires $1.0 \times 10^{-8} < (m_2^2 - m_1^2)$ (sin^2 2θ/sub v//cos 2θ/sub v/) $< 6.1 \times 10^{-8}$ eV^2. Our solutions result in a much smaller flux of neutrinos from the p - p process than predicted by standard solar models, while Bethe's solution results in a flux of neutrinos from the p - process that is about the same as standard solar models.

39018 (FNAL/Pub—86/71-A) General constraints on the age and chemical evolution of the Galaxy. Meyer, B.S.; Schramm, D.N. (Chicago Univ., IL (USA); Fermi National Accelerator Lab., Batavia, IL (USA)). May 1986. Contract AC02-76CH03000. 48p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012305.

The formalism of Schramm and Wasserburg (1970) for determining the mean age of the elements is extended. Model-independent constraints (constraints that are independent of a specific form for the effective nucleosynthesis rate and Galactic chemical evolution over time) are derived on the first four terms in the expansion giving the mean age of the elements, and from these constraints limits are derived on the total duration of nucleosynthesis. These limits require only input of the Schramm-Wasserburg parameter Δ/sup max/ and of the ratio of the mean time for formation of the elements to the total duration of nucleosynthesis, t/sub nu//T. The former quantity is a function of nuclear input parameters. Limits on the latter are obtained from constraints on the relative rate of nucleosynthesis derived from the ^{232}Th/^{238}U, ^{235}U/^{238}U, and shorter-lived chronometric pairs. 65 refs.

39019 (FNAL/Pub—86/81-A) Neutrinos from gravitational collapse. Mayle, R.; Wilson, J.R.; Schramm, D.N. (Fermi National Accelerator Lab., Batavia, IL (USA)). May 1986. Contract AC02-76CH03000. 36p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012304.

Detailed calculations are made of the neutrino spectra emitted during gravitational collapse events (Type II supernovae). Those aspects of the neutrino signal which are relatively independent of the collapse model and those aspects which are sensitive to model details are discussed. The easier-to-detect high energy tail of

the emitted neutrinos has been calculated using the Boltzmann equation which is compared with the result of the traditional multigroup flux limited diffusion calculations. 8 figs., 28 refs.

39020 (LBL—21436) Topics in inflationary cosmologies. Mahajan, S. (Lawrence Berkeley Lab., CA (USA)). Apr 1986. Contract AC03-76SF00098. 63p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86012015.

Thesis.

Several aspects of inflationary cosmologies are discussed. An introduction to the standard hot big bang cosmological model is reviewed, and some of the problems associated with it are presented. A short review of the proposals for solving the cosmological conundrums of the big bang model is presented. Old and the new inflationary scenarios are discussed and shown to be unacceptable. Some alternative scenarios especially those using supersymmetry are reviewed briefly. A study is given of inflationary models where the same set of fields that breaks supersymmetry is also responsible for inflation. In these models, the scale of supersymmetry breaking is related to the slope of the potential near the origin and can thus be kept low. It is found that a supersymmetry breaking scale of the order of the weak breaking scale. The cosmology obtained from the simplest of such models is discussed in detail and it is shown that there are no particular problems except a low reheating temperature and a violation of the thermal constraint. A possible solution to the thermal constraint problem is given by introducing a second field, and the role played by this second field in the scenario is discussed. An alternative mechanism for the generation of baryon number within the framework of supergravity inflationary models is studied using the gravitational couplings of the heavy fields with the hidden sector (the sector which breaks supersymmetry). This mechanism is applied to two specific models - one with and one without supersymmetry breaking. The baryon to entropy ratio is found to be dependent on parameters which are model dependent. Finally, the effect of direct coupling between the two sectors on results is related, 88 refs., 6 figs.

39021 (N—86-20995) Calculation of theoretical chromospheric models and the interpretation of solar spectra from rockets and spacecraft. Semiannual Report, 1 January-31 December 1985. Avrett, E.H. (Smithsonian Institution, Cambridge, MA (USA). Smithsonian Astrophysical Observatory). Feb 1986. 68p. (NASA-CR—176573; SAR—20; SAR—21). NTIS, PC A04/MF A01.

Calculated results based on two chromospheric flare models F1 and F2 of Machado, et al., (1980) are presented. Two additional models are included: F1*, which has enhanced temperatures relative to the weak-flare model F1 in the upper photosphere and low chromosphere, and F3 which has enhanced temperatures relative to the strong flare model F2 in the upper chromosphere. Each model is specified by means of a given variation of the temperature as a function of column mass. The corresponding variation of particle density and the geometrical height scale are determined by assuming hydrostatic equilibrium. The coupled equations of statistical equilibrium is solved as is radiative transfer for H, H-, He I-II, C I-IV, Si I-II, Mg I-II, Fe, Al, O I-II, Na, and Ca II. The overall absorption and emission of radiation by lines throughout the spectrum is determined by means of a reduced set of opacities sampled from a compilation of over 10 to the 7th power individual lines. That the white flight flare continuum may arise by extreme chromospheric overheating as well as by an enhancement of the minimum temperature region is also shown. The radiative cooling rate calculations for our brightest flare model suggest that chromospheric overheating provides enhanced radiation that could cause significant heating deep in the flare atmosphere.

39022 (N—86-21475) Hydrogen line ratios in Seyfert galaxies and low redshift quasars. Final Technical Report, 1 June 1983-31 July 1984. Kriss, G.R. (Michigan Univ., Ann Arbor (USA)). 1984. 14p. (NASA-CR—176547). NTIS, PC A02/MF A01.

New observations of the Lymal alpha radiation/hydrogen alpha radiation ratio in a set of x-ray selected active galactic nuclei and an archival study of International Ultraviolet Explorer (IUE) observations of Lymal alpha low redshift quasars and Seyfert galaxies have been used to form a large sample for studying the influence of soft x rays on the enhancement of Balmer emission in the broad line region. In common models of broad line clouds, the Balmer lines are formed deep in the interior, largely by collisional excitation. Heating within the clouds is provided by soft x-ray radiation, while Lymal alpha is formed mainly by recombination after photoionization. The ratio Lymal alpha/H alpha is expected to depend weakly on the ratio of ionizing ultraviolet luminosity to x-ray luminosity (L sub UV/I sub x). If the Lymal alpha luminosity is used as a measure of L sub UV' a weak dependence of Lymal/H alpha on the x-ray luminosity is found similar to previous results.

39023 (N—86-21476) Theoretical studies of chromospheres and winds in cool stars. Semiannual Progress Report, 1 April-30 September 1985. Hartmann, L. (Smithsonian Institution, Cambridge, MA (USA). Smithsonian Astrophysical Observatory). Jan 1986. 18p. (NASA-CR—176524; SAPR—4). NTIS, PC A02/MF A01.

Propagation of pulsational waves through the atmosphere of the M supergiant alpha Ori was explored using a time dependent hydrodynamic code. Wind properties for three FU Orionis objects were determined using radiative transfer models based on optical line profiles. The effects of varying wind temperature while keeping the velocity steady were considered. Using the premise that FU Orionis eruptions result from massive accretions from a disk into a T Tauri star explains a variety of observational peculiarities of FU Orionis objects.

39024 (N—86-21477) Study of travelling interplanetary phenomena (STIP) workshop travel. Final Report. Wu, S.T. (Alabama Univ., Huntsville (USA)). Jan 1986. 46p. (NASA-CR—176544). NTIS, PC A03/MF A01.

Thirty six abstracts are provided from the SCOSTEP/STIP Symposium on Retrospective Analyses and Future Coordinated Intervals held in Switzerland on June 10 to 12, 1985. Six American scientists participated in the symposium and their abstracts are also included. The titles of their papers are: (1) An analysis of near surface and coronal activity during STIP interval 12, by T. E. Gergely; (2) Helios images of STIP intervals 6, B. V. Jackson; (3) Results from the analysis of solar and interplanetary observations during STIP interval 7, S. R. Kane; (4) STIP interval 19, E. Cliver; (5) Hydrodynamic buoyancy force in the solar atmosphere, T. Yeh; and (6) A combined MHD modes for the energy and momentum transport from solar surface to interplanetary space, S. T. Wu. 1 reference.

39025 (N—86-21478) Shock-induced volatile loss from a carbonaceous chondrite: implications for planetary accretion. Tyburczy, J.A.; Frisch, B.; Ahrens, T.J. (California Inst. of Tech., Pasadena (USA)). Jan 1986. 15p. (NASA-CR—176575). NTIS, PC A02/MF A01.

Solid recovery impact-induced volatile loss experiments on the Murchison C2M meteorite indicate that for an impact of a given velocity, H_2O and total volatiles are driven from the sample in the same proportion as present initially. The primitive surface volatile budget of a planet growing by accretion would have the same bulk elemental composition as the volatiles in the incident planetesimals. Incipient devolatilization of Murchison occurs at an initial shock pressure of about 11 GPa and complete devolatilization occurs at a pressure of about 30 GPa. For the Earth, incipient and complete devolatilization of accreting planetesimals would occur when the planet reached approximately 12% and 27%, respectively, of its present-day radius. Impact-induced devolatilization would profoundly affect the volatile distribution within the accreting planet. Prior to metallic core formation and internal differentiation the growing planet would have a very small core with the same volatile content as the incident material, a volatile depleted mantle, and an extremely volatile rich surface. In the case of the Earth, 99.4 wt% of the total incident volatile material would end up on or near the planetary surface.

39026 (N—86-21479) Oblique impact: a process for providing meteorite samples of other planets. Okeefe, J.D.; Ahrens, T.J. (California Inst. of Tech., Pasadena (USA)). Mar 1986. 16p. (NASA-CR—176616). NTIS, PC A02/MF A01.

Cratering flow calculations for a series of oblique to normal impacts of silicate projectiles onto a silicate halfspace were carried out to determine whether the gas produced upon shock vaporizing both projectile and planetary material could entrain and accelerate surface rocks and thus provide a mechanism for propelling SNC meteorites from the Martian surface. The difficult constraints that the impact origin hypothesis for SNC meteorites has to satisfy are that these meteorites are lightly to moderately shocked and yet were accelerated to speeds in excess of the Martian escape velocity. Two dimensional finite difference calculations demonstrate that at highly probable impact velocities, vapor plume jets are produced at oblique impact angles of 25 deg to 60 deg and have speeds as great as 20 km/sec. These plumes flow nearly parallel to the planetary surface. It is shown that upon impact of projectiles having radii of 0.1 to 1 km, the resulting vapor jets have densities of 0.1 to 1 g/cu.cm. These jets can entrain Martian surface rocks and accelerate them to velocities 5 km/sec. It is suggested that this mechanism launches SNC meteorites to Earth.

39027 (N—86-21483) **Martian surface properties. Final Technical Report.** Greeley, R. (Arizona State Univ., Tempe (USA)). Jan 1986. 8p. (NASA-CR—176556). NTIS, PC A02/MF A01.

The objectives were: to characterize surficial geologic units through integration of Infrared Thermal Mapper (IRTM)-derived regolith properties with other existing remote sensing data; to determine the physical and spectral properties of volcanic units in the mid-latitudes of Mars through the synthesis of the highest resolution IRTM, radar, and imaging data available; and to identify and characterize aeolian terrains on Mars using physical surface characteristics determined from remote sensing data.

39028 (N—86-21486) **Two types of flare associated filament eruptions.** Tang, F. (California Inst. of Tech., Pasadena (USA)). Jan 1986. 23p. (NASA-CR—176571; BBSO—0255). NTIS, PC A02/MF A01.

Using years of high resolution solar footage obtained at Big Bear Solar Observatory, flare associated filament eruptions were studied. In addition to the classical type eruption consisting of expansion and breakup, evidence was found of another type where a layer is shed from the filament and erupts while the inversion line filament below (or, what is left of it) remains in place. Both types of eruptions are presented. It is hoped that the new evidence will shed new light on the understanding of the role of filaments in flares.

39029 (N—86-21487) **Ionic charge distributions of energetic particles from solar flares. Semiannual Report, 1 July-31 December 1985.** Mullan, D.J.; Waldron, W.L. (Delaware Univ., Newark (USA)). Mar 1986. 10p. (NASA-CR—176610). NTIS, PC A02/MF A01.

The effects which solar flare x-rays have on the charge states of solar cosmic rays is determined quantitatively. Rather than to characterize the charge distribution by temperature alone, it is proposed that the x-ray flux at the acceleration site also is used. The effects of flare x-rays are modeled mathematically.

39030 (N—86-21492) **Electromagnetic dissociation effects in galactic heavy-ion fragmentation.** Norbury, J.W.; Townsend, L.W. (National Aeronautics and Space Administration, Hampton, VA (USA). Langley Research Center). Feb 1986. 48p. (NASA-TP—2527; L—16033). NTIS, PC A03/MF A01.

Methods for calculating cross sections for the breakup of galactic heavy ions by the Coulomb fields of the interacting nuclei are presented. By using the Weizsacker-Williams method of virtual quanta, estimates of electromagnetic dissociation cross sections for a variety of reactions applicable to galactic cosmic ray shielding studies are presented and compared with other predictions and with available experimental data.

39031 (N—86-22510) **Papers presented to the workshop on the geology and petrology of the apollo 15 landing site.** (Lunar and Planetary Inst., Houston, TX (USA)). 1985. 80p. (NASA-CR—176622; CONF-8511152—Exc.). NTIS, PC A05/MF A01.

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

Samples from Apollo 15 flight were analyzed to develop models for lunar basin formation and evolution, basin geology, petrology, volcanology, stratigraphy, and geochemistry.

39032 (N—86-22510, pp vp) **Apollo 15 mare units and their petrogenesis.** Binder, A.A. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

Samples from 12 different mare sites were identified and classified among the Apollo 15 samples. The genesis of the Apollo 15 mare units is summarized given the general model of mare basalt source regions and of more basalt genesis derived from a synthesis of the major oxide/major mineral, compatible siderophile, and incompatible trace element data and isotopic ratios of the Rb/Sr and Sm/Nd systems.

39033 (N—86-22510, pp vp) **Comparison of petrology, grain sizes and surface maturity parameters for Apollo 15 regolith breccias and soils.** Bogard, D.D.; Mckay, D.S.; Morris, R.V.; Johnson, P.; Wentworth, S.J. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

A total of 28 Apollo 15 regolith breccias were analyzed for their petrographic and textural properties and for the surface exposure indices solar noble gases and I (sub s)/Fe 0. Similarities and differences in compositional components and irradiation history were examined between regolith breccias and local, present day soils.

39034 (N—86-22510, pp vp) **Apollo 15 mare volcanism: constraints and problems.** Delano, J.W. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

The Apollo 15 landing site contains more volcanics in the form of crystalline basalts and pristine glasses, which form the framework for all models dealing with the mantle beneath that site. Major issues on the petrology of the mare source regions beneath that portion of Mare Imbrium are summarized.

39035 (N—86-22510, pp vp) **Hadley Rille, lava tubes and mare volcanism at the Apollo 15 site.** Greeley, R.; Spudis, P.D. (Geological Survey, Flagstaff, AR). 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

Hadley Rille appears to be a collapsed lava tube/channel, whose formation history may be more intimately related to the mare units sampled at 15 than was previously thought. More work is needed relating samples and observations from Apollo 15 to the rille and its geologic evolution. As the only sinuous rille visited during the Apollo missions, Hadley Rille represents a data source that is directly applicable to the deciphering of processes involved in lunar mare volcanism.

39036 (N—86-22510, pp vp) **Geologic history of quartz-normative and olivine-normative basalts in the vicinity of Hadley Rille (Apollo 15).** Grove, T.L. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

The geologic history of the quartz normative (QNB) and olivine normative (ONB) basalt types at Hadley Rille are discussed. A model for the geology of the mare basalts was constructed from a combination of field observations, sample chemistry, sample petrology and personal bias from terrestrial experience. The model proposes that the QNBs are the only mare lava type that is present as outcrop in the area traversed by the astronauts during the Apollo 15 mission. The returned QNB samples formed during a single

eruptive phase of the Hadley Rille lava tube system. The ONB lavas are an exotic component transported to the site by a cratering event, or the ONBs are samples excavated from older are bedrock that was partly covered by the QNB lavas.

39037 (N—86-22510, pp vp) **Petrology and geochemistry of highlands samples from the Apennine Front.** Lindstrom, M.M. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

Individual rocks from the Hadley Delta massif, part of the Apennine Front, are described beginning with the simplest samples to the most complex breccias. Relationship among the samples were evaluated. Geological interpretations of the samples were speculative because of the limited data set, but provided models to be tested when additional data are available.

39038 (N—86-22510, pp vp) **Ultramafic parent magmas for mare basalts.** Longhi, J. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

Solidification products of basaltic magmas (fine grained basalts and ultramafic glasses) at the Apollo 15 site were examined. Consideration of simple MgO-$6IO_2$-Al_2O_3 systematics plus results of calculations of fractional crystallization was reviewed. Suggestions are presented to account for the lack of correlation between the ultramafic glasses and basalts.

39039 (N—86-22510, pp vp) **Spectral reflectance study of the Hadley-Appenine (Apollo 15) region.** Lucey, P.G.; Hawke, B.R. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

Twenty three near infrared spectra were obtained from the Mauna Kea Observatory 2.2 m telescope. Results of an analysis of near infrared spectra obtained for surface units in the Hadley-Apennine region were presented. Compositional trends from the interior to exterior of the Imbrium are discussed.

39040 (N—86-22510, pp vp) **Samples at the Apollo 15 landing site: types and distribution.** Ryder, G. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

Samples, consisting of more than 350 individually numbered samples of rock and regolith, were collected during the three EVAs on the Apollo 15 mission. Samples consisted of rock specimens, and scooped, trenched, and cored regolith samples. Petrographic and chemical analysis are discussed.

39041 (N—86-22510, pp vp) **Apennine Bench Formation revisited.** Spudis, P.D.; Hawke, B.R. (Hawaii Univ., Honolulu). 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

The Apennine Bench Formation consists of pre-mare light plains materials that crop out south of the crater Archimedes, inside the Imbrium basin. This material was ascribed to either impact or volcanic origins. The characteristics of Apollo 15 KREEP basalts and the Apennine Bench Formation are reviewed to determine whether their characteristics are compatible with a volcanic origin.

39042 (N—86-22510, pp vp) **Origin of pristine KREEP: Effects of mixing between ur KREEP and the magmas parental to the MG-rich cumulates.** Warren, P.H. 1985. NTIS, PC A05/MF A01. (NASA-CR—176622; CONF-8511152—Exc.).

From Shuttle environment and operations II conference; Houston, TX, USA (13 Nov 1985).

The magnesium/incompatible elements paradox is explained by a model that considers not only the magmasphere, but also its aftermath. A systematic mixing of primitive magnesium rich material with residual liquid is discussed as a method to account for the paradox that KREEP basalts, despite their high incompatible element contents, have moderate magnesium ratios. The KREEP basalts are compared with mare basalts.

39043 **(PB—86-179199/XAB) Solar-Geophysical Data Number 490, June 1985. Part 2 (comprehensive reports). Data for December 1984, March-May 1983, and miscellanea (reannouncement of PB86-121993 - see notes field for explanation).** Coffey, H.E. (National Geophysical Data Center, Boulder, CO (USA)). Jun 1985. 92p. (SGD—490-PT-2). NTIS, PC A05/MF A01.

Contents include: Detailed index for 1984-1985; Data for December 1984--(Meudon Carte Synoptique, Solar radio bursts at fixed frequencies, Solar X-ray radiation from GOES satellite graphs, Mass ejections from the sun, Active prominences and filaments, Solar irradiance); Data for March, April and May 1983--(Solar flares March 1983, Solar flares April 1983, Solar flares May 1983, Number of flares August 1966 - May 1983).

39044 **(PB—86-180643/XAB) Ion-release experiments in the solar wind.** Bryant, D.A. (Rutherford Appleton Lab., Chilton (UK)). Oct 1985. 13p. (RAL—85-094). NTIS, PC A03/MF A01.

In a new departure in experimental space plasma physics, lithium and barium plasmas were injected into the solar wind approximately 110,000 km above the Earth's surface. The effects, monitored in-situ by two spacecraft of the AMPTE (Active Magnetospheric Particle Tracer Explorers) mission, included the formation of diamagnetic cavities, a slowing down locally of the solar wind, generation of plasma waves, and heating of solar-wind electrons. These comet-like interactions between the solar wind and obstacles presented by the injected plasmas are discussed and compared with the effect of the natural obstacle of the Earth's magnetosphere first encountered by the solar wind at the bow shock. Particular reference is made to the artifical comet created by a barium-ion release on 27 December 1984.

39045 **Non-Abelian symmetries from higher dimensions in string theories.** Nepomechie, R.I. (Department of Physics, FM-15, University of Washington, Seattle, Washington 98195). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 12, 3670-3677(15 Jun 1986). Contract AC06-81ER40048.

A bosonic string model with G x G gauge excitations can be understood as the dimensional reduction of a simpler string model in higher spacetime dimensions. It follows that the corresponding effective low-energy theories of these two models are similarly related. A close relationship of these bosonic strings to the heterotic string model is also noted.

39046 **Muon production by photons from Cygnus X-3.** Coteus, P.; DeGrand, T. (Department of Physics, University of Colorado, Boulder, Colorado 80302). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3279-3282(1 Jun 1986).

We perform an analytic calculation of TeV-muon production by photons interacting in the atmosphere. The model used contains all the relevant physical properties of this system. We derive several useful approximate scaling relations for muon production. Using the measured photon spectrum from Cygnus X-3 we predict a rate of 2.2×10^{-13} events/cm^2 sec for muon energies exceeding 0.6 TeV, a factor of 320 below the recent Soudan measurement.

39047 **Solar neutrinos from the decay of ^{8}B.** Bahcall, J.N.; Holstein, B.R. (Institute for Advanced Study, Princeton, New Jersey 08540). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 2121-2127(Jun 1986).

The spectrum of neutrinos produced by the beta decay of ^{8}B in the sun is computed including forbidden corrections to the weak interactions. The total cross section for absorption by ^{37}Cl of ^{8}B neutrinos is $(1.06 \pm 0.1) \times 10^{-42}$ cm^2. The uncertainty is determined by calculating the cross section using different measured spectra for the alpha particles that result from the decay of ^{8}B to ^{8}Be and by varying the transition matrix elements consistent with

the branching ratios measured using delayed protons emitted in the beta decay of ^{37}Ca.

39048 **Two-point correlation for rich clusters of galaxies.** Otto, S.; Politzer, H.D.; Wise, M.B. (California Institute of Technology, Pasadena, California 91125). *Physical Review Letters;* **56**: No. 17, 1878-1881(28 Apr 1986). Contract AC03-81ER40050;AS03-83ER13118;FG03-84ER40172.

The rich-cluster two-point correlation function is examined in a model where rich clusters of galaxies form at high peaks of primordial Gaussian mass-density fluctuations (averaged over a suitable volume). Particular attention is paid to the case when the primordial fluctuations have a Zel'dovich spectrum.

39049 **Simulation of the solar wind interaction with the outer regions of the coma.** Omidi, N.; Winske, D. (Institute of Geophysics and Planetary Physics, Univeristy of California, Los Angeles). *Geophysical Research Letters;* **13**: No. 4, 397-400(Apr 1986).

Interaction of the solar wind with newly born cometary ions (0^+) is studied through hybird simulations (particle ions, fluid electrons). The results show that depending on the orientation of the interplanetary magnetic field (IMF) with respect to the solar wind velocity, two kinds of interaction are possible. When IMF is exactly or nearly parallel to the solar wind velocity, momentum transfer between the protons and the 0^+ ions takes place solely through the excitation of large amplitude electromagnetic waves. On the other hand, as IMF becomes more oblique to the solar wind velocity, momentum transfer occurs on a faster time scale through the motional electric field in the solar wind. This more rapid deceleration can lead to the formation of a shock.

39050 **Interaction of heavy ions from comet P/Giacobini-Zinner with the solar wind.** Sanderson, T.R.; Wenzel, K.; Daly, P.; Cowley, S.W.H.; Hynds, R.J.; Smith, E.J.; Bame, S.J.; Zwickl, R.D. (Space Science Department of ESA, Estec, Noordwijk). *Geophysical Research Letters;* **13**: No. 4, 411-414(Apr 1986).

The encounter between the ICE spacecraft and Comet P/Giacobini-Zinner was characterized in the solar wind by intense fluxes of heavy ions, measurable over a region 6×10^6 km in extent. The ions are observed with highly anisotropic angular distributions, steep energy spectra, and a change in the energy spectrum at around 80 keV, consistent with a composition predominantly of the water group. Flux versus time profiles follow a general fall off with increasing distance from the comet but with a marked inbound/outbound asymmetry. This asymmetry is due to the higher solar wind velocity on the outbound pass, giving rise to an increased energy gain of the pick-up ions. The flux versus time profiles are strongly modulated by the rapid changes in the direction of interplanetary magnetic field. We present correlated observations of energetic ions, the interplanetary magnetic field and the solar wind, and compare these observations with theoretical predictions of the ion pick-up process.

39051 **Model of Comet P/Giacobini-Zinner.** Boice, D.C.; Huebner, W.F.; Keady, J.J.; Schmidt, H.U.; Wegmann, R. (T-4, Los Alamos National Laboratory). *Geophysical Research Letters;* **13**: No. 4, 381-384(Apr 1986).

A computer model of Comet P/Giacobini-Zinner is presented which contains photo-processes, gas-phase chemical kinetics, energy balance. Multifluid hydrodynamics with a transition to free molecular flow, and solar wind interaction. Recently, the physics for electrons in the model has been improved by including electron impact ionization and dissociation and separately accounting for electron energetics. Electron heating and cooling mechanisms include photoprocesses, recombination processes, inelastic and elastic collisions with heavy molecules, and expansion cooling. The model incorporates an internally consistent interaction of the solar wind with the coma gas using the axisymmetric ideal fluid dynamic equations. The nuclear size and composition have been chosen to make the calculations relevant to the 11 September 1985 International Cometary Explorer (ICE) encounter with Comet P/Giacobini-Zinner. Model profiles of the temperature, velocity, and number density of the electrons are in good agreement with measurements along ICE's trajectory. These results indicate that the probe passed through a region of the coma at the onset of the plasma tail.

39052 **Three component plasma electron distribution in the intermediate ionized coma of comet Giacobini-Zinner.** Zwickl, R.D.; Baker, D.N.; Bame, S.J.; Feldman, W.C.; Fuselier, S.A.; Huebner, W.F.; McComas, D.J.; Young, D.T. (University of California, Los Alamos National Laboratory, Los Alamos, NM 87545). *Geophysical Research Letters;* **13**: No. 4, 401-404(Apr 1986).

On 11 September, 1985, the interval from 1056 to 1110 UT surrounding closest approach (i.e. within -1.2×10^4 km), ICE encountered a region characterized by an unusually low electron temperature, a high density, a bulk flow speed $V < 30$ km/s, and a relatively low level of plasma turbulence. We call this region the intermediate ionized coma, IIC. Electron velocity distribution functions in the IIC are composed of three distinct components: cold, mid, and hot. We believe that the cold population represents electrons produced close to the comet nucleus by ionization of cometary matter and subsequent cooling by Coulomb collisions. The mid distribution also appears to be composed of electrons produced by photoionization of cometary neutrals, but sufficiently far from the comet nucleus that the distributions are largely unaffected by Coulomb interactions. Thus the mid population is not in thermal equilibrium with the cold distribution. The temperature of the mid distribution compares well with the average energy of electrons resulting from the ionization of H_2O, which leads us to conclude that the composition of the ion population at this distance is consistent with the intepretation that H_2O is the dominant species. The hot component is most likely a population of electrons of solar wind origin. Throughout the IIC the electrostatic potential of the spacecraft was very low (<0.8 eV), implying ICE generated very little impact-produced plasma during its passage.

39053 **Comet/solar wind transition region at Giacobini-Zinner.** Thomsen, M.F.; Bame, S.J.; Feldman, W.C.; Gosling, J.T.; McComas, D.J.; Young, D.T. (Los Alamos National Laboratory, Los Alamos, NM 87545). *Geophysical Research Letters;* **13**: No. 4, 393-396(Apr 1986).

Between about 7 and 12×10^4 km from the nucleus of Comet Giacobini-Zinner, the International Cometary Explorer (ICE) found a region in which the solar wind flow speed decreased and the electron density and temperature increased by factors of ~ 2. This transition region was characterized by large fluctuations in the plasma parameters and by highly variable electron velocity distributions. Electron temperature and density variations through the transition region reveal that ICE never crossed a short-scalelength bow shock during the encounter, although the scalelength for the gross transition in plasma properties is not incompatible with a shock dominated by the length scales of cometary ions. However, many of the electron distributions in the transition region and sheath are similar to those seen behind weak collisionless shocks elsewhere in the heliosphere. A model of the comet/solar wind interaction is suggested in which a standing shock exists sunward of the ICE trajectory, but, due to large variations in the upstream conditions, it is highly variable and perhaps only intermittent along the flanks.

39054 **Search for the interstellar HCN dimer.** Schenewerk, M.S.; Snyder, L.E.; Jewell, P.R.; Buxton, L.W.; Campbell, E.J. (Illinois Univ., Urbana; National Radio Astronomy Observatory, Tucson, AZ; G. B. Du Pont Co., Inc., Parkersburg, WV; Los Alamos National Lab., NM). *Astrophysical Journal;* **296**: 218-221(Sep 1985).

An unsuccessful search was made for emission from the vibrational ground state of the interstellar HC-12N-14 dimer in nine sources. The (HCN)2 search results reported earlier by other groups were for a vibrationally excited state; hence, this is the first reported attempt to detect the vibrational ground state. Upper limits to the (HCN)2 column density per unit velocity were calculated for each source, and a comparison to HCN data for Orion A was made which suggests that the abundance of the HCN dimer is significantly less than that of the monomer. One unidentified line was detected and is reported here with a tentative identification. 18 references.

39055 **Resonant absorption, hot electrons, and cosmic gamma-ray bursts.** Liang, E.P. (Lawrence Livermore National Lab., CA). *Astrophysical Journal;* 283: No. 1, L21-L23(1 Aug 1984). Contract W-7405-ENG-48.

It is proposed that resonant absorption of intense electromagnetic waves impinging onto a neutron star surface during a magnetic flare is the source of the hot electrons whose synchrotron radiation leads to γ-ray bursts. Parameters of the emission layer derived from first principles generally agree with empirical values. The luminosity-temperature scaling law observed by the KONUS experiment, if confirmed, may also be explained by this picture.

39056 **(AD-A—166066/1/XAB) Control of magnetospheric convection by the spatial distribution of ionospheric conductivities.** (SRI International, Menlo Park, CA (USA)). 1 Jan 1986. 25p. NTIS, PC A02/MF A01.

A self-consistent semianalytical model of magnetospheric convection including the effect of conductivities is presented. The motions of the inner edge of the magnetospheric ring current, and the associated field-aligned currents, produced by the externally imposed dawn-to-dusk potential drop across the magnetospheric cavity are computed by using a linear approximation. The coupling between the different diurnal harmonics in the local time variations of fields and currents produced by the local time dependence of ionospheric conductivities is described by an appropriate matrix formalism. The calculations show that the enhancement of auroral conductivities by electron precipitation in the auroral zone signficantly enhances both the typical duration and the absolute amplitude of the penetration of convection electric fields to midlatitudes. Furthermore, the local time variations of the convection electric field generated at midlatitudes by a sudden increase of the dawn-to-dusk potential drop are in good agreement, both at the initial time and after the steady state is reached, with the available statistical models of the disturbance midlatitude electric field.

39057 **(AD-A—166431/7/XAB) Convective stabilization of ionospheric plasma clouds. Memorandum report.** Drake, J.F.; Huba, J.D. (Naval Research Lab., Washington, DC (USA)). 19 Mar 1986. 47p. (NRL-MR—5722). NTIS, PC A03/MF A01.

Stability criteria are derived for the large-scale structuring of ionospheric plasma clouds due to the E X B gradient drift instability. For the equilibrium a cylindrical 2D waterbag cloud aligned along a uniform magnetic field polarized by a neutral wind is considered. A stability analysis is performed that allows three-dimensional perturbations (in r, theta, and z), and consider both local and global modes. It was found that when the parallel wavenumber k/ sub z/ exceeds a threshold value, exponentially growing global eigenmodes form that are localized on the backside of the cloud. This is in contrast to the k/sub z/ = 0 limit in which there are no exponential solutions. As k/sub z/ is increased further, the unstable modes localize at a finite angle away from the backside; at a point where the diamagnetic propagation velocity (V/sub d/) balances the convective-flow velocity of the background plasma around the cloud (V sub b). It was found that the E X B gradient drift instability is stable when V/sub d/ > V/sub b/ so that the cloud is no longer susceptible to large-scale structuring.

39058 **Digital ionosonde observations during equatorial spread F-italic.** (Atmospheric Sciences Group, Earth and Space Sciences Division, Los Alamos National Laboratory, Los Alamos, New Mexico). *Journal of Geophysical Research;* 91: No. A5, 5539-5556(1 May 1986).

In this paper we present and discuss equatorial spread F-italic data taken with a digital ionosonde/HF radar located at Huancayo, Peru. A modified phenomenology is developed which uses the system's ability to do echo location. The onset of irregularities is seen to occur in the east and to move westward, while inside this large-scale structure the plasma is found to drift eastward. A very curious difference has been identified between spread F-italic observations with the ionosonde and with the VHF radar at Jicamarca. At VHF, spread F-italic onset often occurs when the ionosphere is rising, whereas in all five examples presented here, the digital ionosonde detected onset when the apparent ionosphere motion was downward. The result even held on the one night of common data taking. The effect could be instrumental but may be related to the considerable orographic differences in the two sites. Isolated scattering patches are observed and are tentatively identified as detached or "fossil" plumes. At frequencies above the nominal f-italic$_0$F-italic$_2$ the system (and other ionosondes) may in fact function as a coherent radar. During one night, data were obtained simultaneously with the HF radar, a rocket, and the Jicamarca VHF radar. Comparisons of these data are discussed in detail. Finally, additional evidence is presented that acoustic gravity waves play a role in the development of equatorial spread F-italic and in the formation of detached plumes. To be self-consistent, the gravity waves must come from nearby sources such as the tropical rain forest to the east of Jicamarca.

39059 **Electrical changes of the polar ionosphere during magnetospheric substorms.** (Department of Earth Science, Teachers College, Kyungpook National University, Taegu, Korea). *Journal of Geophysical Research;* 91: No. A5, 5737-5754(1 May 1986).

Changes of the distribution of the potential, electric fields, ionospheric currents, field-aligned currents, the Joule heat production rate, the particle energy injection rate and the total energy dissipation rate are examined in detail by comparing them at a presubstorm epoch and the maximum epoch for several substorms on March 17, 18, and 19, 1978. The data sets are obtained on the basis of the magnetic records from the six International Magnetospheric Study meridian chains of observatories by using the computer code developed by Kamide e-italict-italic a-italicl-italic. (1981) and the conductivity model developed by Ahn et al. (1983b). A number of global features that are found to be common to most of the substorms examined in this study include the following: (1) The positive potential cell in the morning sector extends into the evening sector during substorms. (2) When it is intensified, the westward electrojet on the nightside tends to flow equatorward of the positive potential ridge. (3) The so-called "Harang discontinuity" may be identified as the ridge of the negative potential cell. (4) The distribution of field- aligned currents determined by our method is more complicated than the statistical pattern obtained by polar orbiting satellites. (5) The basic ionospheric current pattern is fundamentally the same during a fairly quiet period, a slightly disturbed period and a substorm period. (6) The highest Joule heat production occurs along the westward extension of the westward electrojet, while the particle energy injection rate is high along the westward electrojet in the morning sector.

39060 **Strong electron bidirectional anisotropies in the distant tail: ISEE 3 observations of polar rain.** (Los Alamos National Laboratory, Los Alamos, New Mexico). *Journal of Geophysical Research;* 91: No. A5, 5637-5662(1 May 1986).

A detailed observational treatment of bidirectional electrons (—50 to 50 eV)in the distant magnetotail (r-italicapprox. >100 R-italic/sub E-italic/) is presented. It is found that electrons in this energy range commonly exhibit strong, field-aligned anisotropies in the tail lobes. Because of large tail motions, the ISEE 3 data provide extensive sampling of both the north and south lobes in rapid succession. These data demonstrate directly the strong asymmetries that exist between the north and south lobes at any one time. The bidirectional fluxes are found to occur predominantly in the lobe directly connected to the sunward interplanetary magnetic field in the open magnetosphere model (north lobe for away sectors and south lobe for toward sectors). Electron anisotropy and magnetic field data are presented which show the transition from unidirectional (sheath) electron populations to bidirectional (lobe) populations. Thus we demonstrate the open nature of the distant magnetopause and show that the source of the higher-energy, bidirectional lobe electrons is the tailward directed electron heat flux population in the distant magnetosheath. Taken together, the present evidence suggests that the bidirectional electrons that we observe in the distant tail are closely related to the polar rain electrons observed previously at lower altitudes. Furthermore, these data provide strong evidence that the distant tail is composed largely of open magnetic field lines in contradistinction to some recently advanced models.

39061 **ISEE observations of the plasma sheet boundary, plasma sheet, and neutral sheet: 1, Electric field, plasma, and ion composition.** (Space Sciences Laboratory, University of California, Berkeley). *Journal of Geophysical Research;* 91: No. A5, 5663-5680(1 May 1986).

The first simultaneous study of dc and ac electric and magnetic fields, E x B velocity, plasma flows, β, total energy density, energetic particles, and ion composition from the ISEE satellites and ground and interplanetary magnetic fields has been made to determine (1) the relationship of the previously observed electric fields at the plasma sheet boundary and at the neutral sheet to plasma parameters, and (2) whether the phenomena occurring during quiet and active times were consistent with the formation of a near-earth neutral line during substorms or with the boundary layer model. The following observations during the two substorms studied are in agreement with predictions of the neutral-line model: (1) the buildup of energy stored in the tail magnetic field for 1-2 hours prior to onset, followed by its rapid decrease after onset, (2) the enhanced convection of magnetic field lines and plasma into the neutral sheet from above and below as indicated by the E x B velocity, (3) tailward convection of field lines and plasma (E-italic/sub y/(dawnward and duskward) and B-italic/sub z-italic/ (northward and southward) anticorrelated in sign) at onset, followed by thinning of the plasma sheet, and then convection earthward (E-italic/sub y-italic/ and B-italic/sub z-italic/ correlated in sign) during recovery of the plasma sheet, (4) repeated encounters with the neutral sheet during the times of the large electric fields and fast plasma flows, indicating that both existed throughout the plasma sheet and not just at the boundary and that the substorm-associated phenomena were initiated (5) heating of electrons in association with fast tailward flow and southward B-italic/sub z-italic/.

39062 **ISEE observations of the plasma sheet boundary, plasma sheet, and neutral sheet: 2, Waves.** (Space Sciences Laboratory, University of California, Berkeley). *Journal of Geophysical Research;* 91: No. A5, 5681-5688(1 May 1986).

The companion paper describes the dc electric and magnetic fields, E x velocities, plasma flow, composition and ground magnetic activity for two periods in the magnetotail near 20 R-italic/sub E-italic/. The relationship of the plasma waves to the dc field characteristics is described herein. In addition, for two subintervals which had strong ground magnetic activity, we report comparisons of plasma waves in the magnetotail to characteristics of the dc fields and fluid parameters such as the plasma flow, β, density, temperature, and f-italic/sub p//sub e//f-italic/sub c//sub e/. Upper hybrid waves at multiples of the electron cyclotron frequency near and above the electron plasma frequency were observed for the first time in this region of the magnetosphere and occurred in regions of low β and temperature and high density. This contrasts with electrostatic electron cyclotron waves which occurred in high temperature, high-density regions, as previously reported by Gurnett et al. (1976), and were suppressed when β approx. < 1. Both types of waves were associated with small dc electric fields, nonturbulent dc electric and magnetic fields, and plasma flows of approx. <100 km/s. Broadband electrostatic noise (BEN) and magnetic noise bursts were observed in regions where the dc electric fields and the plasma flows were large, and the dc electric and magnetic fields were turbulent. The dependence of the amplitude and frequencies of BEN on the magnitude of the magnetic field, plasma flow, density, and β was very complex. Enhancements at the upper hybrid frequency and the electron cyclotron frequency were common. Ben was usually suppressed near the neutral sheet but the amplitude reduction varied.

39063 **High-energy proton drift echoes: multiple peak structure.** Belian, R.D.; Baker, D.N.; Hones, E.W.; Higbie, P.R. (Los Alamos National Lab., NM). *Journal of Geophysical Research;* 89: No. A10, 9101-9106(1 Oct 1984).

Many high-energy proton drift echoes observed in association with magnetospheric substorms exhibit multiple fine-structure peaks during the course of one or more of the echoes. Because of the difficulty in distinguishing between temporal, positional, pitch angle selection, and drift shell effects with instruments on a single satellite the identification of these as individual entities (as opposed to statistical variations in proton intensity or other effects) has not been convincingly established heretofore. The energetic ion data from similar instruments on three widely spaced geosynchronous satellites have been examined with the goal of establishing whether or not these multiple peaks are a persistent feature of the injection process. The results suggest that multiple peaks are indeed a real feature of drift echoes. At least three quarters of the ion enhancements that result in drift echoes are made up of multiple-peaked events. A very good correlation between the onset of the various peaks and detailed features observed in high-latitude magnetograms is observed for some of the multiple peaked events. In fact, in their relation to the magnetograms, there seems to be a pairing of pulses; that is, with some dips in the magnetogram there appears to be two associated pulses. Various possible models for the production of multiple peaks, including the ion tearing mode instability in the plasma sheet, magnetic mirroring effects, temporal and/or positional effects of multiple neutral line formation, and effects due to different ion species are discussed. 17 references, 4 figures, 1 table.

39064 **Direct observations of passages of the distant neutral line (80-140 R/sub E/) following substorm onsets: ISEE-3.** Baker, D.N.; Bame, S.J.; Birn, J.; Geldman, W.C.; Gosling, J.T.; Hones, E.W. Jr.; Zwickl, R.D.; Slavin, J.A.; Smith, E.J.; Tsurutani, B.T.; Sibeck, D.G. (Los Alamos National Lab., NM). *Geophysical Research Letters;* 11: No. 10, 1042-1045(Oct 1984).

Detailed plasma and field data are examined for a period of time when ISEE-3 is in the range -140 approximately $<$ X/sub GSM/ approximately $<$ -80 R/sub E/. Several clear examples, at a frequency of $\sim$ once per day, of strong southward magnetic field followed by strong northward field occur when OSEE-3 is in the plasma sheet. During the southward field intervals, the bulk plasma flow is strongly tailward while during the northward field episodes the plasma flow is generally very weak. In all instances of this kind, the signatures at ISEE-3 follow (by 5-10 minutes) the initial impulsive injection of energetic ions at geostationary orbit. It is suggested that the south-to-north field transitions and plasma flow patterns are produced by the passage over ISEE-3 of the distant neutral line immediately following near-earth substorm onset. 12 references, 3 figures.

39066 **Observation of a heated electron population associated with the 6300A SAR arc emission.** Gurgiolio, C.; Slater, D.W.; Winningham, J.D.; Burch, J.L. (Southwest Research Inst., San Antonio, TX). *Geophysical Research Letters;* 9: No. 9, 965-968(Sep 1982). Contract AC06-76RL01830.

Conjunctive observations of the Dynamics Explorer satellite pair and the Pacific Northwest Laboratory scanning photometer unit at Richland, WA have allowed identification of the low energy, heated, electron population associated with the 6300A SAR arc emission. Measurements over the SAR arc on day 296 of 1981 show an enhanced flux in the low altitude 5-12 ev electrons. Analysis of this electron population shows them to be fairly Maxwellian with temperatures on the order of 9900 +/- 1100°K and an earthward field aligned velocity of approximately 275 +/- 60 km/sec. The electrons are not accompanied by ion precipitation. The ion loss cone is empty at least as high as 6000 km. This fact may cast some doubt as to the role of the ring current ions in the SAR arc production. 11 references, 4 figures.

39098 **(AD-A—166167/7/XAB) Intense beam of metastable H_2 molecules.** Garvey, J.F. (California Inst. of Tech., Pasadena (USA). Arthur A. Noyes Lab. of Chemical Physics). 15 Jun 1984. 6p. NTIS, PC A02/MF A01.

A method is described for generating a hyperthermal beam of metastable H_2 molecules, intense enough for scattering and absorption spectroscopy experiments. From the flight time of these species between source and detector, it is estimated that their lifetime exceeds 40 microsec and that they are in the 2p2A state.

39067 (AD-A—166261/8/XAB) Temperature dependence of diffracted-beam intensities in atom-surface scattering. Annual technical report. (California Univ., Santa Barbara (USA). Quantum Inst.). Feb 1986. 10p. (TR—9). NTIS, PC A02/MF A01.

We develop a new method for the calculation of the atom-scattering analog of the Debye-Waller factor. Unlike x-ray and neutron scattering, the properties of an atom scattered by a solid surface cannot be computed by perturbation theory; therefore, the simple Debye-Waller theory cannot be applied. Nevertheless the Debye-Waller phenomenon has a close analog: the elastic intensity is depressed due to the uncorrelated part of the thermal motion of the lattice atoms. To compute this effect, a time-dependent scattering theory is developed in which the quantum properties of the scattered atom are described by propagating coherently an ensemble of wave packets and lattice motion is simulated by a classical Langevin equation. Applications are made to He and Ne scattering from a surface whose lattice dynamics mimics that of Pt(111) but whos corrugation was slightly increased to enrich the diffraction structure.

39068 (AD-A—166275/8/XAB) Mean-trajectory Gaussian wave-packet approach to rotationally inelastic molecule-surface diffraction. Annual report. (California Univ., Santa Barbara (USA). Quantum Inst.). Feb 1986. 42p. (TR—10). NTIS, PC A03/MF A01.

The rotationally inelastic diffraction of H_2 from a corrugated surface is investigated using a mean-trajectory model. The center-of-mass motion is treated using Gaussian wave packets, which propagate on a rotationally averaged potential. This trajectory in turn drives the rotational transitions. The method is nonperturbative and allows for changes in mj, the rotational orientation, and agrees well with recent close-coupling calculations. A connection is also made with the recent semiclassical trajectory work of DePrito. The effects of the attractive well depth on rotational excitation and diffraction are considered.

39069 (AD-A—166291/5/XAB) Multiple Gaussian wave-packet theory of H_2 diffraction and rotational excitation by collision with solid surfaces. Annual report. (California Univ., Santa Barbara (USA). Quantum Inst.). Feb 1986. 43p. (TR—11). NTIS, PC A03/MF A01.

The Gaussian wave packets and the coupled channel method are combined to develop a theory of H_2 diffraction and rotational excitation by collision with surfaces. This improves our previous work on H_2 diffraction since it eliminates the mean trajectory approximation; it also extends Heller's work to problems in which the dynamics require the creation of new packets which must be coupled to each other as they are propagated through the interaction region. The approximations involved in the above Gaussian wave-packet approach can be removed by using extending method proposed by Flect, Morris and Felt, which propagates the Gaussian wave function exactly and efficiently.

39070 (CONF-8604208—1) Geometrical energy derivative evaluation with MRCI wave functions. Shepard, R. (Argonne National Lab., IL (USA)). 1986. Contract W-31-109-ENG-38. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86012112.

From Utah-Sanibel symposium on the interface between electronic structure and dynamics; Salt Lake City, UT, USA (21 Apr 1986).

The theory of MCSCF and CI energy derivatives with respect to geometrical variations is briefly reviewed with special attention given to the MCSCF and MRCI energy gradients. A computational procedure is proposed for MRCI energy gradients that does not require the solution to any "coupled-perturbed MCSCF" equations, it does not require any expensive direct-CI matrix-vector products involving derivative integrals, and it does not require any derivative integrals to be transformed from the AO basis to the MO basis. An additional feature is that it does not require any changes to existing MCSCF gradient evaluation programs in order to compute MRCI gradients. The only difference in the two cases is the exact nature of the data passed to the gradient evaluation program from the previous steps in the computational procedure. The additional effort required to compute the entire MRCI energy gradient vector is approximately that required for one additional iteration of the MRCI diagonalization procedure and for one additional MCSCF iteration. For large scale MRCI wave functions, the MRCI energy gradient should only require about 10% of the effort of computing the wave function itself. This computational procedure removes a major computational bottleneck of potential energy surface evaluation. 7 refs.

39071 (DOE/ER/45050—1) Properties of molecular solids and fluids at high pressures and temperatures. [Final report]. Etters, R.D. (Colorado State Univ., Fort Collins (USA). Dept. of Physics). 1985. Contract AC02-84ER45050. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86012509.

Equilibrium structures and orientations, lattice vibrational and librational model frequencies, intramolecular vibron mode frequencies, sound velocities, equations of state, compressibilities, and structural and orientational phase transitions in molecular solids are determined over a wide range of pressures and temperatures. In the high temperature fluid phase the equations of state, vibron frequencies, the melting transition, specific heats, compressibilities, second virial coefficients, viscosities and other transport properties, and the nature of orientational and magnetic correlations are determined. The techniques used include several strategies to optimize multi-dimensional functions as a means to determine equilibrium structures and orientations, self consistent phonon lattice dynamics methods, constant pressure and constant volume Monte-Carlo strategies with continuously deformable boundary conditions, mean field approximations, and classical perturbation methods. Systems studied include N_2, O_2, CO, CO_2, F_2, N_2O, benzine, nitromethane, HCL, HBr, and H_2. 50 refs., 4 figs.

39072 (LA-UR—86-1423) Vacuum ultraviolet photolysis of acetylene in the 110- to 135-nm region. Tiee, J.J.; Sander, R.K.; Quick, C.R.; Estler, R. (Los Alamos National Lab., NM (USA); Fort Lewis Coll., Durango, CO (USA)). 1986. Contract W-7405-ENG-36. 7p. (CONF-8603127—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010202.

From American Institute of Physics conference; Monterey, CA, USA (1 Mar 1986).

State-specific photofragmentation of acetylene in the 110- to 135-nm region has been studied using vuv laser and synchrotron sources. Investigations have been focused on learning the spectroscopic identity of the excited photoproducts by examining their time-resolved fluorescence. Results of the quenching of the excited photofragment emission and the emission polarization measurements are presented. An interpretation of these results in relating the observed photoproducts to the vuv photodissociation process is discussed. 13 refs., 3 figs., 1 tab.

39073 (LA-UR—86-1943) CO/sub 2/ laser sustained CW discharge atomic beam source. Cross, J.B.; Cremers, D.A.; Spangler, L.H.; Hoffbauer, M.A.; Archuleta, F.A. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 11p. (CONF-860636—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012383.

From 15. international symposium on rarefied gas dynamics; Grado, Italy (16 Jun 1986).

A high pressure, supersonic, laser sustained plasma nozzle beam source has been developed for the production of intense ($>10^{19}$ particles s^{-1}-sr^{-1}) beams of atomic and/or radical species having kinetic energies in the range of 1 to 10 eV. A high plasma temperature (10 to 30,000 K) is produced in the throat of a hydrodynamic expansion nozzle by sustaining a cw optical discharge in a gas using a high power cw CO_2 laser. Gas mixtures are expanded through the nozzle/discharge region creating energetic atoms and molecules. An oxygen atom beam has been produced with a kinetic energy of 2 to 3 eV and an intensity of $\sim 10^{18}$ O-atoms $s^{-1}sr^{-1}$. O-atom collisions (1 eV) from an uncharacterized nickel surface shows strong specular scattering with approximately 50% energy loss to the surface. Argon beams having kinetic energies between 5 to 10 eV with intensities of $>10^{19}$ atoms $s^{-1}sr^{-1}$ have also been produced. 13 refs., 8 figs.

39074 (PB—86-179520/XAB) Vuv (vacuum-ultraviolet) and x-ray sources for atomic and molecular science. Final report. (National Research Council, Washington, DC (USA)). 1986. 84p. NTIS, PC A05/MF A01.

The National Research Council's Committee on Atomic and Molecular Sciences (CAMS) convened a workshop on November 8-9, 1984, to review the current status of short-wavelength light sources of interest to the atomic, molecular, and optical (AMO) physics community. The general intent of the Committee was to (1) review advantages and disadvantages of existing technologies in the ultraviolet (uv) and x-ray spectral range, and (2) determine which of these technologies, if any, is best suited for particular problems in AMO physics. Workshop Papers titles are the following: Atomic and molecular physics with vuv and x-ray photons; Properties of synchrotron radiation from bending magnets, wigglers, and undulators; Partially coherent x rays from modern storage rings; Lasers in the vacuum ultraviolet and x-ray region; Laser produced plasma light sources; and Free electron lasers for the xuv spectral region.

39075 (PNL-SA—13602) Charge transfer and ionization occurring in proton- and helium ion-atom collisions. DuBois, R.D. (Pacific Northwest Labs., Richland, WA (USA)). Dec 1985. Contract AC06-76RL01830. 18p. (CONF-860148—8). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012647.

From 2. United States/Mexico cooperative symposium on atomic and molecular physics; Cocoyoc, Mexico (1 Jan 1986).

Two examples are presented where specific channels have been identified that are responsible for single and double target ionization via direct coulomb ionization or charge transfer processes. Using ratios of absolute cross sections that have been measured for these processes it was shown that an independent electron model should be appropriate for calculating direct double target ionization but generally appears to be inadequate in calculating charge transfer plus ionization and double charge transfer cross sections. At present such detailed information can be obtained only in limited cases. However cross sections with detailed final charge state information should provide stringent tests for present and future theoretical work. 22 refs., 2 figs.

39076 (UCRL—94096) Measured 1 to 40 keV photoabsorption cross sections for Fe, Ni, Sn, Ta, Pt, Au, Pb, U. Kerr Del Grande, N. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 10p. (CONF-860880—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012355.

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

Total absolute photoabsorption cross sections were measured at 1 keV to 40 keV for Fe, Ni, Sn, Ta, Pt, Au, Pb and U. Overall measurement uncertainties were 3%, less than 2% of which were statistical. The measurements tested widely-used theoretical and experimental tables. They favored relativistic Hartree-Slater atomic calculations. Agreement with theory was typically 5% or better, except near the absorption edge energy region with EXAFS peaks. The measured peak and valley magnitudes for the solid samples ranged from 0% to 20% (with an average of 10%) above the atomic calculations for Fe and Ni. Discrepancies with experimental tables, at energies below 6 keV, were 10% to 40%. Authors of widely-used tables have been fraught with problems where there were few or no prior measurements, only interpolations and theory. The present measurements used samples from a few hundred to a few thousand $\mu g/cm^2$, such that the mean free path thicknesses, μrho x, were 1 and 3 at 1.5 keV. Samples were vapor-deposited on, and floated off of, optically flat glass slides. Their weights per unit area, rho x g/cm^2, were determined within 2% or 3%. Thicker samples, of known weights per unit area, were used for the higher energy measurements. The ratio of μrho x for thick and thin samples tested rho x for the thin samples. Back-scattered protons and alpha particles, as well as ion microanalyses, were used to test the samples' purity. Uranium deposits were sandwiched between two beryllium layers to impede surface oxidation. The transmission measurements were taken with a demountable x-ray tube, vacuum crystal monochromator and flow proportional counter, using slits that provided a narrow-beam geometry. 19 refs., 5 figs.

39077 Measurement of the rotational spectrum of the water cation (H_3O^+) by laser magnetic resonance. (Department of Chemistry and Materials and Molecular Research Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* 85: No. 3, 1252-1260(1 Aug 1986).

Nine rotational transitions of v-italic = 0 X-italic-tilde ^{2}B-italic$_1$ H_3O^+ have been measured by laser magnetic resonance. Optical combination differences have been combined with the LMR data in a weighted-least-squares analysis using a Watson S-italic-reduced rotational-fine structure Hamiltonian. Twenty-four molecular constants were simultaneously determined, including three hyperfine parameters and the axial components of both the anisotropic and rotational g-italic tensors. The anisotropic g-italic tensors are compared with their calculated values using the Curl relationship. An r-italic$_0$ structure was determined and is in good agreement with several a-italicb-italic i-italicn-italici-italict-italici-italico-italic results.

39078 Studies of total ionization in gases/mixtures of interest to pulsed power applications. Reinking, G.F.; Christophorou, L.G.; Hunter, S.R. (Atomic, Molecular and High Voltage Physics Group, Health and Safety Research Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Applied Physics;* 60: No. 2, 499-508(15 Jul 1986). Contract AC05-84OR21400.

The energy required to produce an electron-ion pair (i.p.), W, for the α-particle irradiated gases CF_4, C_2F_6, C_3F_8, and n-C_4F_{10} has been measured and found to be 34.3, 34.5, 34.4, and 34.2 eV/i.p., respectively. The large values of W for these perfluorocarbons (PFCs) are attributed to their large cross sections for electron impact-induced dissociation. The constancy of W for this group of molecules is discussed with respect to the constancy of the ratio ($\sim$0.68) of the respective (energy integrated) total ionization cross section to the total (energy integrated) inelastic scattering cross section. W values are also reported for the binary gas mixtures Ar/CF_4, Ar/C_2F_6, Ar/C_3F_8, and CH_4/CF_4 which have conduction and insulation properties suitable for use in diffuse discharge opening switches. The W values for these binary mixtures (and for C_2H_2/CF_4, C_2H_2/C_2F_6, and C_2H_2/C_3F_8) increase with the amount of PFCs in the mixture and (contrary to the Ar/C_2H_2 mixture) exhibit no Jesse effect. The ternary gas mixtures Ar/C_2H_2/PFC (= CF_4, C_2F_6, C_3F_8) containing $<$ or $\approx$10% PFC were found to exhibit a pronounced Jesse effect which is a function of the content of the PFC in the mixture and the electron scattering cross section of the PFC itself. Substantial increases in ionization can be achieved by adding to the Ar/PFC binaries 1-3% of C_2H_2.

39079 Sputtering of negative hydrogen ions by cesium bombardment. Lopes, J.L.; Greer, J.A.; Seidl, M. (Department of Physics and Engineering Physics, Stevens Institute of Technology, Hoboken, New Jersey 07030). *Journal of Applied Physics;* 60: No. 1, 17-23(1 Jul 1986). Contract AC02-84ER53167.

The production of negative hydrogen ions sputtered from a low work function converter surface has been investigated. Hydrogen and cesium admitted into the vacuum chamber are chemisorbed on a polycrystalline molybdenum target. H^-, Mo^-, and e^- are sputtered from this cathode by Cs^+ ions in the energy range 150—1000 eV. Angular and parallel energy distributions of H^-, Mo^-, and e^- are measured as a function of hydrogen gas pressure, cesium coverage, and incident ion energy. For optimum coverage, the H^- ion temperature varies from 0.65% and 0.35% of the incident Cs^+ bombarding energy for Cs^+ ion energies of 250 and 1000 eV, respectively. The secondary electrons have a temperature of 0.04% of the bombarding energy almost independent of Cs^+ energy. The spreads increase with decreasing target coverage and are independent of surface roughness. The optimum H^-, Mo^-, and e^- yields are also measured as a function of hydrogen pressure and incident Cs^+ bombarding energy. The optimum H^- ion yield is 0.41 at a Cs^+ ion energy of 750 eV. By extrapolating the H^- ion yield at low Cs^+ bombarding energy, a Cs^+ ion threshold energy of 120 eV may be estimated. This indicates a binding energy of hydrogen smaller than 3.6 eV.

39080 Electron transport measurements in methane using an improved pulsed Townsend technique. Hunter, S.R.; Carter, J.G.; Christophorou, L.G. (Atomic, Molecular and High Voltage Physics Group, Health and Safety Research Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Applied Physics;* **60**: No. 1, 24-35(1 Jul 1986). Contract AC05-84OR21400.

An improved pulsed Townsend technique for the measurement of electron transport parameters in gases is described. The accuracy and sensitivity of the technique have been investigated by performing, respectively, electron attachment coefficient measurements in pure O_2 over a wide range of E/N at selected O_2 pressures and by determining the electron attachment and ionization coefficients and electron drift velocity in CH_4 over a wide E/N range. Good agreement has been obtained between the present and the previously published electron attachment coefficients in O_2 and for the drift velocity measurements in CH_4. The data on the electron attachment coefficient in CH_4 (measured for the first time) showed that with the present improved pulsed Townsend method, electron attachment coefficients up to 10 times smaller than the ionization coefficients at a given E/N value can be accurately measured. Our measurements of the electron attachment and ionization coefficients in CH_4 are in good agreement with a Boltzmann equation analysis of the electron gain and loss processes in CH_4 using published electron scattering cross sections for this molecule.

39081 Gerade electronic states of Xe_2 observed using resonantly enhanced multiphoton ionization. Dehmer, P.M.; Pratt, S.T.; Dehmer, J.L. (Argonne National Laboratory, Argonne, Illinois 60439). *Journal of Chemical Physics;* **85**: No. 1, 13-24(1 Jul 1986). Contract W-31-109-ENG-38.

The two photon resonant, three photon ionization spectrum of the rare gas dimer Xe_2 was determined in the energy region of the Xe* 5d and 6p states. A number of new band systems were observed that arise from two photon transitions from the ground state to bound vibrational levels of excited states of gerade symmetry. The analysis of the observed vibronic structure of these band systems provides new information on the dissociation energies and the potential energy curves of the low-lying dipole forbidden excited states of Xe_2.

39082 Vibrational effects in the spin-orbit autoionization of HBr. Lefebvre-Brion, H.; Dehmer, P.M.; Chupka, W.A. (Laboratoire de Photophysique Moleculaire, Bat. 213, Universite de Paris-Sud, 91405 Orsay, France). *Journal of Chemical Physics;* **85**: No. 1, 45-50(1 Jul 1986). Contract W-31-109-ENG-38.

The high resolution relative photoionization cross section for HBr is reported in the energy region between the $^3Pi_3$/sub //$_2$ and $^3Pi_1$/sub //$_2$ ionic limits. A theoretical interpretation of the spectrum is given using the multichannel quantum defect theory with an ab initio calculation of the relevant electronic quantities. The vibrational couplings due to the R variation of both the electrostatic and the spin-orbit matrix elements are introduced and are shown to be essential to reproduce the qualitative features of the experimental data in the 1052—1060 A wavelength region.

39083 Observation of rapid E-to-V energy transfer in the 2.3 μm laser-induced fluorescence of PuF_6 containing HF. Rice, W.W.; Barefield, J.E. II; Pack, R.T. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **85**: No. 1, 255-261(1 Jul 1986).

Following excitation of PuF_6 at 800 nm, laser-induced fluorescence (LIF) of PuF_6 is observed near 2.3 μm; HF v = 1 to 0 emission, arising from near resonant electronic-to-vibrational (E→V) energy transfer, is also observed with the same temporal decay as the PuF_6 fluorescence. From the rise and decay times of the PuF_6 and HF fluorescence and their relative intensities, all the rate constants involved in this relaxation are determined. The E→V rate constant is found to be (7.5 +- 2.5) x 10^3 $Torr^{-1}$ s^{-1}, and that for the relaxation of HF (v = 1) by PuF_6 is found to be (5.7 +- 0.7) x 10^3 $Torr^{-1}$ s^{-1}.

39084 Infrared energy levels and intensities of carbon dioxide Part 3. (U.S. Air Force Geophysics Laboratory, Optical Physics Division, Hanscom Air Force Base, Massachusetts 01731). *Applied Optics;* **25**: No. 11, 1795-1816(1 Jun 1986).

New spectroscopic constants have been calculated for seven isotopic variants of carbon dioxide. Extensive new high resolution observations provide access to the majority of the vibrational energy levels for $^{12}C^{16}O_2$ and $^{13}C^{16}O_2$ below 7000 cm^{-1} and for $^{13}C^{16}O^{18}O$ below —5000 cm^{-1}. Recent intensity measurements provided by Fourier transform spectroscopy have been incorporated with parallel band intensity calculations to furnish improved band intensities for a significant number of carbon dioxide bands. An updated list of 634 bands which play a role in terrestrial atmospheric transmission and emission problems is given. The constants provided in this paper are also of use in preliminary analysis for identifying transitions observed for the first time or measured to higher rovibrational levels.

39085 Experimental studies of three-photon ionization of Ba: Evidence of channel interference and Raman coupling. Kelly, J.F.; Hessler, J.P.; Alber, G. (Chemistry Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] A: General Physics;* **33**: No. 6, 3913-3937(Jun 1986). Contract W-31-109-ENG-38.

Three-photon ionization spectra of Ba were studied which result from two-photon resonances between the $6s^2$ $^1S_0$ ground state and the 6snd J = 2,6s(n + 1)s $^1S_0$ (16< or =n<40) Rydberg states and 5d7d $^1D_2$, ^3P/sub 0,2/ perturber states. A tunable laser with field strength 10^-/sup($^{+5}$) a.u. was used to drive the excitation in a low-density atomic beam (n< or ≈3 x 10^9 cm^{-3}). Resonant line shapes were systematically studied as a function of light polarization and intensity. Studies with linearly polarized light find all resonant line shapes manifest the same peak shift and asymmetry which is traced to the ac Stark shift of the ground state. The resonant peak height, shift, and linewidth scale linearly with light intensity which is accounted for with a rate-equation formulation.

39086 Electron-impact ionization of Mg-like ions: S^{4+}, Cl^{5+}, and Ar^{6+}. Howald, A.M.; Gregory, D.C.; Meyer, F.W.; Phaneuf, R.A.; Mueller, A.; Djuric, N.; Dunn, G.H. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] A: General Physics;* **33**: No. 6, 3779-3786(Jun 1986). Contract AC05-84OR21400.

Absolute electron-impact ionization cross sections were measured as a function of collision energy for ions in the Mg-isoelectronic sequence S^{4+}, Cl^{5+}, and Ar^{6+}. The measurements cover the energy range from threshold to 1500 eV and show onsets due to the indirect ionization process of inner-shell excitation followed by autoionization. The relative magnitude of the indirect ionization process increases dramatically in comparison with the direct process along the sequence, a feature which is also emphasized by earlier data for Al^+.

39087 Electron-impact ionization in the magnesium-isoelectronic sequence. Pindzola, M.S.; Griffin, D.C.; Bottcher, C. (Physics Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] A: General Physics;* **33**: No. 6, 3787-3791(Jun 1986). Contract AC05-84OR21400.

Excitation-autoionization contributions to the electron-impact ionization of the Mg-like ions S^{4+}, Cl^{5+}, and Ar^{6+} are calculated in the distorted-wave approximation. The calculations indicate that the largest contributions are due to the 2p→3p monopole and 2p→3d dipole excitations from either the $2p^63s^2$ ground-state configuration or the $2p^63s3p$ excited-state configuration. Excellent agreement with the experimental crossed-beam measurements of Howald et al. is obtained when one assumes that a substantial fraction of the ions coming from the electron cyclotron resonance ion source are in metastable states of the $2p^63s3p$ excited-state configuration.

39088 Resonant charge transfer in symmetric alkali-ion—alkali-atom collisions. Men, F.K.; Kimura, M.; Olson, R.E. (Department of Physics, University of WisconsinMadison, Madison, Wisconsin 53706). *Physical Review [Section] A: General Physics;* 33: No. 6, 3800-3806(Jun 1986).

Resonant charge transfer in alkali-ion—alkali-atom collisions is investigated by using the molecular-orbital expansion method incorporating the use of electron translation factors. Molecular wave functions and eigenenergies are obtained by the pseudopotential method. Molecular properties, R/sub e/, D/sub e/, and ω/sub e/, obtained in the present calculation are in good accord with other recent theoretical results, as well as spectroscopic measurements. Three-state close-coupling calculations reproduce the positions of the maxima and minima in the oscillatory structure seen experimentally in the resonant-charge-transfer cross sections for the Li_2^+ and Cs_2^+ systems. The magnitude of the total cross sections and their velocity dependence are in agreement with experimental measurements.

39089 Contributions of excitation autoionization to electron-impact ionization of Mg-like Al^+, S^{4+}, Cl^{5+}, and Ar^{6+} ions. Tayal, S.S.; Henry, R.J.W. (Department of Physics and Astronomy, Louisiana State University, Baton Rouge, Louisiana 70803-4001). *Physical Review [Section] A: General Physics;* 33: No. 6, 3825-3831(Jun 1986).

The R-matrix method is used to calculate the contributions of excitation autoionization to electron-impact ionization in Mg-like Al^+, S^{4+}, Cl^{5+}, and Ar^{6+} ions. The ground $3s^2\ ^1S$ state together with the autoionizing states arising from the $2p^63s^23p$, $2p^63s^23d$, $2p^63s^24s$, $2s2p^63s^23p$, $2s2p^63s^23d$, and $2s2p^63s^24s$ configurations are included in the R-matrix expansion. Large numbers of bound terms of appropriate symmetry are included in the expansion to account for the resonant-excitation—double-autoionization process. The total ionization cross sections are obtained by combining the cross sections for inner-shell excitation with direct-ionization cross sections. Our calculation shows an abrupt and significant rise in the cross sections, in agreement with recent crossed-beam measurements of Howald et al. The importance of indirect processes over the direct process increases with increasing ionic charge along the sequence.

39090 Spectrum of sodium-like selenium: Se XXIV. Brown, C.M.; Seely, J.F.; Feldman, U.; Richardson, M.C.; Behring, W.E.; Cohen, L. (EO Hulburt Center for Space Research, Naval Research Laboratory, Washington, DC 20375-5000). *Journal of the Optical Society of America B: Optical Physics;* 3: No. 5, 701-703(May 1986). Contract AI08-79DP40092;FC08-85DP40200.

High-resolution spectra of Se XXIV have been obtained with a 3-m gazing-incidence spectrograph. Thin plastic foils coated with selenium were irradiated with four or eight beams of the OMEGA laser in a line-focus configuration. Spectrograms were obtained by viewing the plasma axially. Prominent in the spectra were the 3s-3p and 3p-3d transitions in the 150-2400-A region and the transitions nl-(n+1)l with n = 3,4 in the 24-80-A region. We also present the energy levels and ionization limit derived from the measured wavelengths.

39091 State-selective ionization detection of neutral NO following electron-stimulated desorption. Burns, A.R. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1499-1500(May 1986). Contract AC04-76DP00789.

A tunable UV laser is used to selectively ionize neutral NO molecules that are in specific rotational and vibrational states following electron-stimulated desorption (ESD) from NO-covered Ni and Pt surfaces. An analysis of the results supports previous studies that reported a shallow valence-level mechanism for ESD neutrals.

39092 Auger and electron energy loss study of the electronic structure of U—M(M = Fe,Co,Ni) metallic glasses. Bevolo, A.J.; Drehman, A.J. (Ames Laboratory, Energy and Mineral Resources Research Institute, Iowa State University, Ames, Iowa 50011). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1589-1594(May 1986).

Auger intensity measurements from a series of U/sub 100-x/M/sub x/(M = Fe,Co,Ni) metallic glasses confirms a predicted change in local order about the uranium atoms for alloy compositions near $U_{72}M_{28}$. As x increases, independent of M, more electrons are charge transferred out of the uranium local density of valence states (LDOVS). At the highest x value measured, $U_{42}Co_{58}$, more than half of the valence electrons in the uranium LDOVS have been lost. The 5d core level electron energy loss spectra suggest that for x< or =28,6d valence states are involved in the charge transfer, while for x> or =28, it is mostly the 5f states that are involved.

39093 Ionic and neutral decomposition of gaseous bromochloromethanes. Driscoll, D.C.; Bishop, J.A.; Sturm, B.J.; Dowben, P.A.; Olsen, C.G. (Department of Physics and the Laboratory for Solid State Science and Technology, Syracuse University, Syracuse, New York 13244). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 823-827(May 1986). Contract W-7405-ENG-82.

The ionization potentials for CCl_4, CCl_3Br, CBr_2Cl_2, CBr_4, CCl_3, and CBr_3 have been measured using electron impact techniques. These numbers have been combined with previously published thermodynamic values in order to construct thermodynamic cycles for ionic and neutral decomposition of the bromochloromethanes. The n to σ^*, n to s, and n to p electronic transition energies have also been determined on the basis of photoabsorption spectra.

39094 Detection of surface glow related to spacecraft glow phenomena. Langer, W.D.; Cohen, S.A.; Manos, D.M.; Motley, R.W.; Ono, M.; Paul, S.F.; Roberts, D.; Selberg, H. (Plasma Physics Laboratory, Princeton University, P.O. Box 451, Princeton, NJ 08544). *Geophysical Research Letters;* 13: No. 4, 377-381(Apr 1986).

A source of low energy neutral atoms and molecules was developed by using a biased limiter to scrape-off and reflect neutralized ions from a toroidal plasma. Beams of nitrogen and nitrogen-oxygen mixtures with energies of 1 to 15 eV and fluxes > 10^{14}/cm^2/s were directed on target surfaces consisting of z-302 and z-306 paints. With the nitrogen beams a glow due to beam-surface interactions were detected. In addition, a volume glow effect due to beam-gas interactions which may play a role in spacecraft glow was observed.

39095 Status of the AGS polarized negative ion source. Sluyters, T.; Alessi, J.; Kponou, A. (Accelerator Department, Brookhaven National Laboratory, Associated Universities, Inc., Upton, New York 11973). *AIP (American Institute of Physics) Conference Proceedings;* 117: No. 1, 25-31(25 May 1984). (CONF-830591—).

From Polarized ion workshop; Vancouver, Canada (23 May 1983).

A polarized negative ion source (H) has been modified for use in the A Anating Gradient Synchrotron to produce once every second a beam of 7.5 mic roamperes in .5 ms pulses. The source was based on the co-linear colliding principle whereby a polarized thermal atomic hydrogen beam collides in the interaction (solenoid) region with 40 keV neutral cesium particles, producing the negative hydrogen ions by charge exchange processes.

39096 Ring magnetron ionizer for polarized negative ion sources. Alessi, J.G.; Sluyters, T.; Hershcovitch, A. (Accelerator Department, Brookhaven National Laboratory, Associated Universities, Inc., Upton, New York 11973). *AIP (American Institute of Physics) Conference Proceedings;* 117: No. 1, 32-36(25 May 1984). (CONF-830591—).

From Polarized ion workshop; Vancouver, Canada (23 May 1983).

A method is proposed for producing a polarized negative ion source coning of hydrogen 1 minus ions. This simple method uses a self-extracted deuterium 1 minus ion beam from a ring magnetron source to produce a polarized negative hydrogen ion beam by charge exchange reactions. This method not only offers improvements in intensity, but equally important, improvements in reliability and lifetime.

39097 **Developing a 500 eV proton beam.** Chamberlin, E.P.; Benage, J.F. Jr.; Williams, H.E. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *AIP (American Institute of Physics) Conference Proceedings;* **117**: No. 1, 82-93(25 May 1984). (CONF-830591—).

From Polarized ion workshop; Vancouver, Canada (23 May 1983).

Tests have been carried out which indicate that H^- intensity limitations in Lamb-shift polarized ion sources result from large divergence in the 500 eV H^+ ion beam. Intensity limitations due to other effects are not yet measurable.

39098 **Working group summary-lamb-shift sources.** Clegg, T.B. (Department of Physics, University of North Carolina, Chapel Hill, North Carolina 27514). *AIP (American Institute of Physics) Conference Proceedings;* **117**: No. 1, 103-113(25 May 1984). (CONF-830591—).

From Polarized ion workshop; Vancouver, Canada (23 May 1983).

Basic charge-exchange cross sections on which the Lamb-shift source relies are reviewed. In addition the various processes which cause destruction of the 2S-metastable atoms inside the source are examined. Understanding these processes is certainly important for optimizing the intensity and polarization of the emerging beam. Measurements which can be used to learn about the beam plasma of ions and electrons in the source and the contribution of this plasma in quenching the matastable atoms are discussed.

39099 **Charge-transfer collisions for polarized ion sources.** Schlachter, A.S. (Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *AIP (American Institute of Physics) Conference Proceedings;* **117**: No. 1, 180-205(25 May 1984). (CONF-830591—). Contract AC03-76SF00098.

From Polarized ion workshop; Vancouver, Canada (23 May 1983).

Charge-transfer processes relevant to polarized ion sources are discussed and results are summarized. The primary atom discussed is hydrogen, with particular emphasis on H^- formation. Heavier negative ions are briefly discussed.

39100 **Spin exchange optical pumping to produce large amounts of polarized nuclei.** Happer, W.; Miron, E.; Knize, R.; Cecchi, J. (Princeton University, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **117**: No. 1, 114-122(25 May 1984). (CONF-830591—). Contract AC02-76CH03073.

From Polarized ion workshop; Vancouver, Canada (23 May 1983).

The transfer of momentum by spin exchange collisions are discussed for an alkali vapor, which can be easily polarized by optical pumping. For hydrogen atoms the spin exchange rates can be very fast and the alkali vapor can be only a small trace contamination of the atomic hydrogen gas.

39101 **Vibrational energy distribution of CO in the oxidation of C on Pt.** Kori, M.; Halpern, B.L. (Yale Univ., New Haven, CT). *Chemical Physics Letters;* **98**: No. 1, 32-36(10 Jun 1983). Contract FG01-78ET11384.

CO, excited to its seventh vibrational level, is generated by C oxidation on Pt at 1000-1400 K. Analysis of its Fourier transform IR emission spectrum suggests a non-equilibrium, yet statistical, vibrational distribution. A long-lived reaction complex involving 2-3 Pt atoms is postulated. 20 references, 2 figures.

39102 **Inner shells as a link between atomic and nuclear physics.** Merzbacher, E. (Univ. of North Carolina, Chapel Hill). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 1-12(1982). (CONF-820855—). Contract AS05-76ER02408.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

Nuclear decay and reaction processes generally take place in neutral or partially ionized atoms. The effects of static nuclear properties (size, shape, moments) on atomic spectra are well known, as are electronic transitions accompanying nuclear transitions, e.g. K capture and internal conversion. Excitation or ionization of initially filled inner shells, really or virtually, may modify nuclear Q values, will require correction to measured beta-decay endpoint energies, and can permit the use of inner-shell transitions in the determination of nuclear widths. Improvements in resolution continue to enhance the importance of these effects. There is also beginning to appear experimental evidence of the dynamical effects of atomic electrons on the course of nuclear reactions. The dynamics of a nuclear reaction, which influences and may in turn be influenced by atomic electrons in inner shells, offers instructive examples of the interplay between strong and electromagnetic interactions and raises interesting questions about coherence properties of particle beams. A variety of significantly different collision regimes, depending on the atomic numbers of the collision partners and the collision velocity, will be discussed and illustrated. 21 References, 5 figures.

39103 **Atomic inner-shell threshold excitation with synchrotron radiation.** Ice, G.E.; Brown, G.S.; Armen, G.B.; Chen, M.H.; Crasemann, B.; Levin, J.; Mitchell, D. (Oak Ridge National Lab., TN). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 105-113(1982). (CONF-820855—). Contract W-7405-ENG-26.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

Monochromatized synchrotron radiation from a focused 8-pole wiggler beam line has been used to excite the L_3 and L_2 holes of atomic Xe and the K hole of atomic Ar near their photoionization thresholds. The Xe L_3-M_4M_5 ($^1G_4$) Auger line, the Xe L_2-L_3N_{45} Coster-Kronig line, and the Ar K-$L_{23}L_{23}$ Auger line with incident x-ray energies from ~20 eV below threshold to ~200 eV above threshold have been measured. The spectra allow accurate determination of spectator-satellite energy shifts, post-collision interaction (PCI) shifts in the diagram-line energy, and spectral changes associated with the resonant Raman Auger (RRA) effect. The energies of satellites corresponding to photoelectrons promoted to bound states exhibit linear dispersion as a function of the initial photon energy. The measured post-collision interaction energy shifts of the diagram lines agree qualitatively with semiclassical PCI theory above threshold. In all cases, the energy of the diagram line is observed to decrease below threshold. The intensity of the 5d spectator line associated with the Xe L_3-M_4M_5 line is larger than expected from absorption measurements. 7 references, 7 figures.

39104 **Resonant behavior in the projectile K x-ray yield associated with electron capture in ion-atom collisions.** Tanis, J.A.; Bernstein, E.M.; Graham, W.G.; Clark, M.; Shafroth, S.M.; Johnson, B.M.; Jones, K.; Meron, M. (Western Michigan Univ., Kalamazoo). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 146-157(1982). (CONF-820855—). Contract AC02-76CH00016.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

A review of recent effects to observe simultaneous electron capture-and-K-shell excitation in ion-atom collisions is presented. This process is qualitatively analogous to dielectronic recombination (inverse Auger transition) in free-electron-ion collisions, and, hence, is expected to be resonant. Experimentally, events having the correct signature for simultaneous capture-and-excitation are isolated by detecting projectile K x rays in coincidence with ions which capture a single electron. In a recent experiment involving 70-160 MeV S^{15+} ions incident on Ar, resonant behavior was observed in the yield of projectile K x rays associated with electron capture. This resonance is attributed to simultaneous capture-and-excitation. The position (120 MeV) and width (60 MeV) of the ob-

served resonance are in good agreement with theoretical calculations. The data indicate that this resonant process is an important mechanism in inner-shell vacancy production in the energy range studied. 11 references, 4 figures, 1 table.

39105 In search of spontaneous positron creation. Greenberg, J.S. (Yale Univ., New Haven, CT). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 173-205(1982). (CONF-820855—). Contract AC02-76ER03074.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

The recent experiments investigating the behavior of the electron-positron field in strong external electromagnetic fields is reviewed. In particular, the search for spontaneous positron creation in superheavy collision systems is discussed. A striking new result emerging from this search is the observation of narrow peaked structures in the positron spectra whose origin cannot be associated with the established dynamic mechanisms of positron production involving Coulomb trajectories only. The possibility that these peaks may be signatures for the spontaneous decay of the vacuum and for the formation of metastable giant nuclear complexes is considered in the content of recent experimental results. 52 references, 23 figures.

39106 Collisionally excited few-electron systems: theoretical introduction and survey. Ford, A.L.; Reading, J.F.; Becker, R.L. (Texas A & M Univ., College Station). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 229-241(1982). (CONF-820855—). Contract W-7405-ENG-26.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

Excitation, ionization, and charge transfer in collisions of protons (and antiprotons) with the single-electron targets H, He^+, and Li^{2+} are considered. These collisions are fist compared to other types of ion-atom collisions. A brief review of the authors' theoretical method is given; in particular a description is given of how the authors allow for both large charge transfer and ionization probabilities while retaining the computational efficiency that allows them to consider a variety of collision partners and collision energies. The comparison of the results to other theoretical work and to experiment is commented on. The qualitative features of the various inelastic cross sections are discussed, in particular how they scale with collision energy, target nuclear charge, and the sign of the projectile charge. 15 references, 6 figures.

39107 Production of collisionally excited few-electron ions. Cocke, C.L. (Kansas State Univ., Manhattan). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 242-252(1982). (CONF-820855—).

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

This paper reviews some characteristics of the production of slow, highly ionized recoils in the bombardment of gaseous targets by fast heavy ion beams. One example of the use of an ion source based on this idea is discussed. 29 references, 15 figures.

39108 Wigglers and undulators as intense x-ray sources. Brown, G.S. (Stanford Synchrotron Radiation Lab., CA). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 318-320(1982). (CONF-820855—).

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

It is now evident, from both theoretical and operational experience, that the synchrotron radiation emitted by special purpose insertion devices (wigglers and undulators), is several orders of magnitude more intense than the radiation from conventional bending magnets. The radiation is highly polarized, and, in the case of undulators, quasi-monochromatic and highly polarized. These properties have motivated the construction of such devices on a number of electron storage rings, many of which have now fully instrumented beam lines. In what follows, the spectral properties of the radiation emitted by such devices are discussed , and the facilities that are available for atomic physics research are summarized. 2 references, 1 table.

39109 Many-electron effects in photoelectron core spectra. Lindau, I. (Stanford Univ., CA). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 559-568(1982). (CONF-820855—).

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

Many electron effects in photoelectron core spectra are now well-established phenomena. This paper will be centered around experiments where the tunability of synchrotron radiation has been utilized to study: 1. Photoelectron emission enhancement of the 5s and 5p partial photoionization crossections at and above the photoionization threshold for the 4d subshell of Ba. These many-electron effects can be studied as the photon energy is continuously tuned through the ionization thresholds of inner core levels; 2. The plasmon loss intensity as a function of the excitation energy of the photons for a few free-electron like elements (Al, Si). A strong enhancement is observed in the 5s and 5p partial crossections at and above the 4d ionization threshold in Ba. These resonances cannot be described in the framework of a one-electron model but are strong many-body effects. However, the more advanced many-body calculations can reproduce the 4d excitation as well as the enhancement in the outer 5s and 5p shells quite accurately. The intensity of the bulk plasmon loss structure was studied over a broad photon energy range from core levels of Si and Al. A clear trend is observed when the excitation energy is tuned from the ionization threshold and up. 50 references, 5 figures.

39110 Resonance and threshold effects in photoemission up to 3500 eV. Shirley, D.A.; Kobrin, P.H.; Lindle, D.W.; Truesdale, C.M.; Southworth, S.H.; Becker, U.; Kerkhoff, H.G. (Lawrence Berkeley Lab., CA). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 569-583(1982). (CONF-820855—). Contract AC03-76SF00098.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

Beam Lines at the Stanford Synchrotron Radiation Laboratory (SSRL) now provide photon beams throughout the entire range 5-5000 eV, with a pulse structure very well-suited to time-of-flight (TOF) photoelectron spectroscopy. This facility, together with a TOF spectrometer, has been used to measure photo-emission cross sections $\sigma(\epsilon)$ and asymmetry parameters $\beta(\epsilon)$ for several interesting systems. A summary of early results is given. Metal vapors (Ba, Cd, Mn, Hg) were studied using a high-temperature oven. Resonant photoemission was observed in several cases. Both $\sigma(\epsilon)$ and $\sigma(\epsilon)$ showed resonant behavior at 21.1 eV for several lines in Cd. The 4d, 5s, and 5p $\sigma(\epsilon)$ line profiles differed dramatically, illustrating the detailed information about continuum states that is available from photoemission. Correlation satellites in photoemission from rare gases have been observed over a very wide energy range, including those seen in the K-shells of He, Ne and Ar and in the L-shell of Ne. The structure and preliminary intensity variations of these satellites will be discussed. Molecular shape resonances in C(ls), N(ls), and O(ls) photoemission were observed for the first time, in the molecules CO, CO_2, OCS, CF_4, N_2 and NO. Both the π and σ resonances were observed in KVV Auger emission, and the σ resonances were studied by photoemission. 31 references, 18 figures.

39111 Exciting oxidation of CO on Pt. Mantell, D.A.; Ryali, S.B.; Halpern, B.L.; Haller, G.L.; Fenn, J.B. (Yale Univ., New Haven, CT). *Chemical Physics Letters;* **81:** No. 2, 185-187(15 Jul 1981). Contract FG01-78ET11384.

An uncollimated molecular beam (free jet) of CO and O_2 molecules incident on a polycrystalline Pt surface at 775 K in vacuo produces vibrationally hot CO_2 molecules at a density sufficient for infrared emission spectrometry. Analysis of spectra at a resolution of 0.1 cm^{-1} clearly shows that nascent product molecules have much more internal excitation than would be the case for equilibrium at the surface temperature. 4 references, 1 figure.

39112 (AD-A—166015/8/XAB) Steady-state approach to excitation mechanisms in the ICP (inductively-coupled plasma). Technical report. Hieftje, G.M.; Rayson, G.D.; Olesik, J.W. (Indiana Univ., Bloomington (USA). Dept. of Chemistry). 1985. 14p. (INDU/DC/GMH/TR—85-68). NTIS, PC A02/MF A01.

A new approach to investigating ionization and excitation mechanisms within the inductively-coupled plasma (ICP) is described. The method involves a comparison of the spatial behavior of analyte emission intensities with the concentration product of reacting species as predicted by an assumed kinetically controlling mechanism. The limitations and uncertainties in this approach to mechanistic understanding are evaluated. In this preliminary study, the involvement of Penning and electron-impact processes resulting in ionization and excitation of calcium atoms and ions was investigated, and the resulting correlations are described. From these correlations, atom-excitation seems to occur through an ion-electron recombination process whereas ion generation and excitation is suggested to occur by a Penning process in the outer plasma regions and excitation by electron impact within the central channel of the ICP.

39113 (LA-UR—86-1679) Quantized vortex filaments in incompressible fluids. Goldin, G.A.; Menikoff, R.; Sharp, D.H. (Rutgers--the State Univ., New Brunswick, NJ (USA). Dept. of Mathematics; Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 4p. (CONF-8605145—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86011249.

From International conference on the physics of phase space; College Park, MD, USA (20 May 1986).

Among the solutions A/sub t/(x) to the Euler equations for a classical incompressible fluid are those describing vortex filaments. Here we discuss quantum analogues of such solutions in 2 and 3 dimensions.

39114 Acceleration of a buoyant sphere in dry water. Crawford, F.S. (Virginia Institute for Theoretical Astronomy and Astronomy Department, University of Virginia). *American Journal of Physics;* **54**: No. 7, 584-584(Jul 1986).

It is pointed out that the formula for the upward acceleration of a submerged, buoyant sphere should contain the effective mass of the water that is accelerated downward. (AIP)

39115 Some rigorous results concerning spectral theory for ideal MHD. Laurence, P. (Department of Mathematics, Pennsylvania State University, University Park, Pennsylvania 16802). *Journal of Mathematical Physics (New York);* **27**: No. 7, 1916-1926(Jul 1986). Contract AC02-76ER03077.

Spectral theory for linear ideal MHD is laid on a firm foundation by defining appropriate function spaces for the operators associated with both the first- and second-order (in time and space) partial differential operators. Thus, it is rigorously established that a self-adjoint extension of F(ξ) exists. It is shown that the operator L associated with the first-order formulation satisfies the conditions of the Hille—Yosida theorem. A foundation is laid thereby within which the domains associated with the first- and second-order formulations can be compared. This allows future work in a rigorous setting that will clarify the differences (in the two formulations) between the structure of the generalized eigenspaces corresponding to the marginal point of the spectrum $\omega = 0$.

39116 Explosion of water droplets. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Applied Optics;* **25**: No. 11, 1837-1839(1 Jun 1986).

We use self-similarity to describe the motion of vapor emanating from a water droplet that has been exploded by a short pulse from a high energy laser. This approach allows us to obtain a qualitative description of the experiment of Kafalas and Herrmann.

39117 Comment on "Classical hard-sphere fluid in infinitely many dimensions". Luban, M. (Department of Physics, 12 Physics Building, Iowa State University, Ames, Iowa 50011). *Physical Review Letters;* **56**: No. 21, 2330-2330(26 May 1986). Contract W-7405-ENG-82.

A Comment on the Letter by Frisch, Rivier, and Wyler, Phys. Rev. Lett. 54, 2061 (1985).

39118 Analytic theory of the selection mechanism in the Saffman-Taylor problem. Hong, D.C.; Langer, J.S. (Institute for Theoretical Physics, University of California, Santa Barbara, California 93106). *Physical Review Letters;* **56**: No. 19, 2032-2035(12 May 1986). Contract FG03-84ER45108.

We present an analytic approach to the problem of predicting the widths of fingers in a Hele-Shaw cell. Our analysis is based on the WKB technique developed recently for dealing with the effects of surface tension in the problem of dendritic solidification. We find that the relation between the dimensionless width λ and the dimensionless group of parameters containing the surface tension, ν, has the form λ-(1/2)~ν/sup 2/3/ in the limit of small ν.

39119 Shape selection of Saffman-Taylor fingers. Combescot, R.; Dombre, T.; Hakim, V.; Pomeau, Y.; Pumir, A. (Groupe de Physique des Solides, Ecole Normale Superieure, F-75231 Paris Cedex 05, France). *Physical Review Letters;* **56**: No. 19, 2036-2039(12 May 1986).

Among all problems of pattern selection the one posed by the Saffman-Taylor finger is yet unsolved, although numerics and experiments indicate the very simple property that the relative width of the finger tends to (1/2) in the low—surface-tension limit. We explain this by performing an expansion beyond all orders leading to the formulation of a nonlinear eigenvalue problem with a discrete set of solutions. In particular we predict that the relative width of the finger tends to (1/2) as the surface tension to the power (2/3).

39120 Spin relaxation in normal liquid ^{3}He: T-italic$_1$ in the Fermi liquid (T-italic<<T-italic/sub F/) regime. (Department of Physics, State University of New York at Stony Brook, Stony Brook, New York). *Journal of Low Temperature Physics;* **63**: No. 3, 215-234(1 May 1986).

The low-temperature (T-italic<<T-italic/sub F/) spin relaxation time T-italic$_1$ in normal liquid ^{3}He is calculated. First an expression for T-italic$_1$ is obtained using the Landau kinetic equation, which is in terms of the perturbations of the scattering amplitudes due to nuclear dipole-dipole interactions. These perturbations are obtained using the induced interaction model, which explicitly includes the effects of many-body correlations arising from the Pauli principle. The results are in good agreement with experiment, as well as with previous calculations.

39121 Prediction of flow rates through an orifice at pressures corresponding to the transition between molecular and isentropic flow. DeMuth, S.F.; Watson, J.S. (Fuel Recycle Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 3, 344-347(May 1986). Contract AC05-84OR21400.

A model of compressible flow through an orifice, in the region of transition from free molecular to isentropic expansion flow, has been developed and tested for accuracy. The transitional or slip regime is defined as the conditions where molecular interactions are too many for free molecular flow modeling, yet not great enough for isentropic expansion flow modeling. Due to a lack of literature establishing a well-accepted model for predicting transitional flow, it was felt such work would be beneficial. The model is nonlinear and cannot be satisfactorily linearized for a linear regression analysis. Consequently, a computer routine was developed which minimized the sum of the squares of the residual flow for the nonlinear model. The results indicate an average accuracy within 15% of the measured flow throughout the range of test conditions. Furthermore, the results of the regression analysis indicate that the transitional regime lies between Knudsen numbers of approximately 2 and 45.

39122 Shearing motion of a fluid-saturated granular material. Passman, S.L.; Nunziato, J.W.; Bailey, P.B.; Reed, K.W. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Journal of Rheology;* 30: No. 1, 167-192(Feb 1986). Contract AC04-76DP00789.

We discuss the application of a recently developed theory of multiphase mixtures to fluid-saturated granular materials. The theory includes the incompressibility of each phase, but unlike other theories of the type, does not require pressure equilibrium between the phases. We do a theoretical study of the motion of this material in a viscometric simple shearing apparatus. It is shown that simple shearing generally does not occur. Typically, in the vicinity of a boundary, if the solid volume fraction is low, a layer of high shear rate occurs, while if the solid volume fraction is high, a "locking" phenomenon occurs. Otherwise, there is a tendency for particles to accumulate in regions of low shear rate.

39123 (ORNL/tr—86/22) Possible nonstationary solutions in the turbulence of a two-dimensional liquid. Krasheninnikov, S.I. (Oak Ridge National Lab., TN (USA); Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1986. Contract AC05-84OR21400. Translation of IAE-3960/6, Moscow, 1984. 6p. NTIS, PC A02/MF A01. File Number DE86012198.

It was found that a kinetic equation for the fluctuations in the velocity of an ideal two-dimensional incompressible liquid permits of self-similar solutions that preserve the energy and entropy. Estimates were obtained on the time-dependence of the intensity of the fluctuations. 10 refs.

39124 Method for computing three-dimensional turbulent flows. Bernard, P.S.; Berger, B.S. (Univ. of Maryland, College Park). *SIAM Journal on Applied Mathemadics;* 42: No. 3, 453-470(Jun 1982). Contract AS05-81ER10809.

The MVC (mean vorticity and covariance) turbulence closure is derived for three-dimensional turbulent flows. The derivation utilizes Lagrangian time expansion techniques applied to the unclosed terms of the mean vorticity and covariance equations. The closed mean vorticity equation is applied to the numerical solution of fully developed three-dimensional channel flow. Anisotropies in the wall region are modelled by pairs of counterrotating streamwise vortices. The numerical results are in close agreement with experimental data. Analysis of the contributions of the terms in the mean vorticity equation gives insight into the dynamics of the turbulent boundary. 41 references, 7 figures.

39125 (BNL—37890) Hadronic production of J/sup PC/ = 2^{++} glueballs. Lindenbaum, S.J. (Brookhaven National Lab., Upton, NY (USA)). 17 Mar 1986. Contract AC02-76CH00016. 31p. (CONF-860150—5). NTIS, PC A03/MF A01; GPO Dep. File Number DE86011199.

From Winter condensed matter physics conference: frontiers in condensed matter X-ray physics; Aspen, CO, USA (12 Jan 1986).

An OZI suppressed channel with variable mass, namely the reaction $\pi^- p \rightarrow$ phi phi n, has been used as a filter which allows resonating gluons or glueballs to pass, while strongly rejecting conventional quark-built hadronic states. The breakdown of the OZI suppression signals a glueball. Glueball mass and particle width estimates are discussed. Reasons why g/sub T/'s have not been seen in other channels, particularly the decay of J/psi, are considered. 34 refs., 9 figs. (LEW)

39126 (DESY—85-115) B lifetime measurements from PETRA. Venkataramania, H. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Wisconsin Univ., Madison (USA). Dept. of Physics). Oct 1985. 31p. (CONF-850375—22; WIS—85/40/OCT-PH). NTIS (US Sales Only), PC A03/MF A01. File Number DE86752065.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

Two detectors from PETRA, TASSO and JADE, have measured the B lifetime by first selecting a sample of b enriched events and then using the impact parameters of charged tracks in this sample. JADE does b enhancement using high psub(t) leptons while TASSO uses the higher sphericity of bottom jets compared to average jets. TASSO uses impact parameters of all 'good' tracks in an event while JADE uses only that of the lepton. TASSO and JADE measure the B lifetime to be 1.57 +- 0.32 +- 0.36 psec and 1.8 +- 0.5 +- 0.4 psec respectively. (orig./HSI).

39127 (DESY—85-119) Observation of a new charmed meson. Albrecht, H.; Binder, U.; Harder, G.; Lembke-Koppitz, I.; Philipp, A.; Schmidt-Parzefall, W.; Schroeder, H.; Schulz, H.D.; Wurth, R.; Donker, J.P. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Dortmund Univ. (Germany, F.R.). Inst. fuer Physik; Heidelberg Univ. (Germany, F.R.). Inst. fuer Hochenergiephysik; McGill Univ., Montreal, Quebec (Canada); Carleton Univ., Ottawa, Ontario (Canada); Toronto Univ., Ontario (Canada)). Nov 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752069.

Using the ARGUS detector at DORIS II, we have obtained evidence for a new charmed resonance which decays into Dsup(*+-)(2010)πsup(-+). The observed mass and width are (2420 +- 6) MeV/c^2 and (70 +- 21) MeV/c^2 respectively. The fragmentation function is found to be hard, as expected for a state containing a leading charm quark produced by non-resonant e^+e^- annihilation. (orig.).

39128 (DOE/ER/03072—36) Pion structure as observed in Fermilab experiment E 615. McDonald, K.T. (Princeton Univ., NJ (USA)). 7 May 1986. Contract AC02-76ER03072. 7p. (CONF-8603119—6). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010434.

From 21. Rencontre de Moriond: strong interactions and gauge theories conference; Les Arcs, France (16 Mar 1986).

In an experiment performed at Fermilab we explore the structure of the pion via the Drell-Yan process, in the reactions π/sup +-/N $\rightarrow \mu^+\mu^-$X at 80 and 255 GeV/c. The emphasis is on the kinematic region in which the momentum of the pion is largely carried by a single quark, which proves to be rather accessible to experimental study. The data indicate substantial departures from the expectations of asymptotic QCD, but agree well with a calculation which includes the effect of gluon exchange among the quarks inside the pion. With our large sample of muon pairs, we also set the current-best limits on the decay $D^0 \rightarrow \mu^+\mu^-$ and on D^0-anti D^0 mixing.

39129 (DOE/ER/03230—T5) Research in elementary particle physics. Technical progress report, June 1, 1985-May 31, 1986. Kirsch, L.E.; Schnitzer, H.J.; Bensinger, J.R.; Abbott, L.F.; Blocker, C.A. (Brandeis Univ., Waltham, MA (USA). Dept. of Physics). 1986. Contract AC02-76ER03230. 26p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012491.

Progress is reported in both experimental and theoretical elementary particle research. Experimental activities include: construction of the Forward Electromagnetic Shower Counters for the Collider Detector at Fermilab (CDF); a test run in the CDF, involving observation of a small number of proton-antiproton collisions; design of a self-contained single wire proportional chamber with pressure and temperature sensing for monitoring the gain of gases used by various components of the CDF; data acquisition, and calibration. Also included are a search for a dibaryon of strangeness=-1; hyperon weak radiative decay. Theoretical research is reported in the areas of quantum field theory, string theory, elementary particle phenomenology, cosmology, field theory in curved spacetimes, and cosmology. 34 refs. (LEW)

39130 (DOE/ER/10663—T2) Experimental elementary particle physics research. Technical progress report. Arenton, M.W. (Arizona Research Labs., Tucson (USA)). Apr 1986. Contract AC02-80ER10663. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012205.

The major current activity reported, experiment E-705 at Fermilab, is discussed. This experiment was originally designed with two main physics objectives, the high-statistics study of charmonium production, and the study of high transverse momentum direct photons. Other work is reported that used the Fermilab Multiparticle Spectometer (MPS) to study final states containing multiple strange particles. One experiment, E-580, triggered on the materialization of two neutral Vee's plus up to 5 charged particles produced in 200 GeV/c pion minus-nucleon interactions. Another, E-623, triggered on 4 charged K's, with the addition of a trigger processor designed to enhance those events where the K's originated from phi decay, produced in 400 GeV/c pN interactions. Experiment E-609 was a study of the production of jets in 200 GeV/c pion-proton and 400 GeV/c proton-proton interactions using a large full-azimuth calorimeter detector. Analysis of single-jet and di-jet cross sections at 400 GeV/c are completed. (LEW)

39131 **(FNAL-TM—1400) View of software for HEP experiments.** Johnstad, H.; Lebrun, P.; Lessner, E.S.; Montgomery, H.E. (Fermi National Accelerator Lab., Batavia, IL (USA)). May 1986. Contract AC02-76CH03000. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86012596.

A view of the software structure typical of a High Energy Physics experiment is given and the availability of general software modules in most of the important regions is discussed. The aim is to provide a framework for discussion of capabilities and inadequecies and thereby define areas where effort should be assigned and perhaps also to serve as a useful source document for the newcomer to High Energy Physics. 74 refs.

39132 **(LA-UR—86-2055) Comparison of beta-ray polarizations in Fermi and Gamow-Teller transitions and SU(2)/sub L/ x SU(2)/sub R/ x U(1) models.** Herczeg, P. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 4p. (CONF-860575—9). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012416.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

SU(2)/sub L/ x SU(2)/sub R/ x U(1) models are analyzed via measurements of the ratio of beta-ray polarizations in Fermi and Gamow-Teller transitions. Results for this ratio had previously been interpreted only in the framework of manifestly left-right symmetric models. The investigation reported studies the implications of the ratio for more general models, including the most general one which allows for CP-violation, unequal left-handed and right-handed quark mixing angles, and mixing in the leptonic sector. For each case the corresponding constraints on the parameters are compared with constraints provided on them by other data. 7 refs. (LEW)

39133 **(LA-UR—86-2197) Search for rare muon and pion decay modes with the crystal box detector.** Piilonen, L.E.; Bolton, R.D.; Bowman, J.D.; Cooper, M.D; Frank, J.S.; Hallin, A.L.; Heusi, P.; Hoffman, C.M.; Hogan, G.E.; Mariam, F.G. (Los Alamos National Lab., NM (USA); Stanford Univ., CA (USA); Chicago Univ., IL (USA); Temple Univ., Philadelphia, PA (USA)). 1986. Contract W-7405-ENG-36. 7p. (CONF-860575—12). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012436.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

New experiental upper limits for the branching ratios of the lepton-family-number nonconserving decays $\mu^+ \rightarrow e^+\gamma$ and $\mu^+ \rightarrow e^+\gamma\gamma$ are presented. A new determination of γ, the ratio of pion axial vector to vector form factors, from radiative pion decay is also reported. These results are from data taken with the Crystal Box detector at LAMPF. 11 refs., 7 figs.

39134 **(LA-UR—86-2283) New results for rare muon decays.** Mischke, R.E.; Bolton, R.D.; Bowman, J.D.; Cooper, M.D.; Frank, J.S.; Hallin, A.L.; Heusi, P.A.; Hoffman, C.M.; Hogan, G.E.; Mariam, F.G. (Los Alamos National Lab., NM (USA); Stanford Univ., CA (USA); Chicago Univ., IL (USA); Temple Univ., Philadelphia, PA (USA)). 1986. Contract W-7405-ENG-36. 6p. (CONF-860741—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012419.

From International symposium on weak and electromagnetic interactions in nuclei; Heidelberg, F.R. Germany (1 Jul 1986).

Branching-ratio limits obtained with the Crystal Box detector are presented for the rare muon decays $\mu \rightarrow eee$, $\mu \rightarrow e\gamma$, and $\mu \rightarrow e\gamma\gamma$. These decays, which violate the conservation of separate lepton-family numbers, are expected to occur in many extensions to the standard model. We found no candidates for the decay $\mu \rightarrow eee$, yielding an upper limit for the branching ratio of B/sub $\mu 3e/ < 3.1 \times 10^{-11}$ (90% C.L.). A maximum-likelihood analysis of the $\mu \rightarrow e\gamma$ candidates yields an upper limit of B/sub $\mu e\gamma/ < 4.9 \times 10^{-11}$ and an analogous analysis of $\mu \rightarrow e\gamma\gamma$ candidates gives an upper limit of B/sub $\mu e\gamma\gamma/ < 7.2 \times 10^{-11}$. These results strengthen the constraints on models that allow transitions between lepton families.

39135 **(LBL—21402) Do the cross sections for pp and p anti p continue to rise as $\log^2(s/s_0)$.** Block, M.M.; Cahn, R.N. (Northwestern Univ., Evanston, IL (USA). Dept. of Physics; Lawrence Berkeley Lab., CA (USA)). Mar 1986. Contract AC03-76SF00098;AC02-76ER02289. 16p. (CONF-8603119—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012066.

From 21. Rencontre de Moriond: strong interactions and gauge theories conference; Les Arcs, France (16 Mar 1986).

A model-free analysis is made of the experimental total cross section, the ratio of real to imaginary portion of the forward nuclear scattering amplitude, and the nuclear slope parameter, for elastic scattering in proton-proton and proton-antiproton collisions, particularly in the low t region where t is the four-momentum transfer squared. The requirements of analyticity are compared with experimental data through direct use of analytic functions. It is found likely that the total cross section does not rise as $\log^2(s/s_0)$. (LEW)

39136 (NBS/SP—711, pp 1-10) **Particle properties of the neutron.** Ramsey, N.F. (Harvard Univ., Cambridge, MA). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

Particle properties of the neutron and experiments which have determined these properties are reviewed. Properties discussed include mass, electric charge, magnetic monopole, electric and magnetic dipole moments, neutron mean life for beta decay, ratio of axial vector coupling constants for the weak interaction, electric and magnetic polarizability, period for n anti n oscillations and various quantized properties such as spin, statistics and isospin. 58 refs.

39137 (NBS/SP—711, pp 25-30) **Implications of neutron beta-decay.** Byrne, J. (Univ. of Sussex, Brighton, England). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

An analysis is presented of the implications of results derived from the experimental study of neutron β-decay within the context of weak interaction theory. Comments on their significance in cosmology and astrophysics are offered. 22 refs.

39138 (NBS/SP—711, pp 31-35) **Review of the measurements of the neutron lifetime.** Robson, J.M. (McGill Univ., Montreal, Canada). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

A brief review is given of experiments which have measured the neutron lifetime. Some requirements which new experiments must satisfy are discussed. 12 refs., 6 figs.

39139 (NBS/SP—711, pp 42-47) **Determination of the neutron lifetime using e-p coincidence.** Wilkerson, J.F. (Los Alamos National Lab., NM). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

An experiment is being constructed to measure the neutron lifetime to better than 1% accuracy. The measurement will employ a novel experimental technique, a calorimetric measurement of the neutron flux. A sophisticated detector system is being used which should yield good signal to background discrimination. A summary of the experiment design is presented. 10 refs., 3 figs.

39140 (NBS/SP—711, pp 48-53) **Determination of the neutron lifetime by counting trapped protons.** Byrne, J.; Dawber, P.G.; Scott, R.D.; Robson, J.M.; Greene, G.L. (Univ. of Sussex, Brighton, England; Univ. of Glasgow, East Kilbride, Scotland; McGill Univ., Montreal, Canada; National Bureau of Standards, Gaithersburg, MD). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

A new experiment is proposed to determine the neutron lifetime by counting decay protons stored in an electromagnetic trap. Novel features of this technique, in the light of previous experience, is offered. 6 refs., 4 figs.

39141 (NBS/SP—711, pp 54-58) **In-beam neutron lifetime measurements at the Institut Laue-Langevin.** Dubbers, D. (Institut Max von Laue-Paul Langevin, Grenoble, France; Institut der Universitaet, Heidelberg, Germany). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

At the Institut Laue-Langevin there are at present two projects to measure the neutron lifetime "in beam," both using a rather long cold neutron beam volume. Two different methods to obtain the neutron lifetime from such measurements are mentioned. These are storage of the neutron in some kind of neutron bottle and measurement of the exponential decrease of their number as a function of a storage time and counting the neutron decay products near a beam of (preferentially cold) neutrons. The solution of problems associated with the second of these lifetime measurement techniques is discussed. 2 figs.

39142 (NBS/SP—711, pp 59-62) **Neutron lifetime measurements with bottled neutrons at ILL.** Mampe, W. (Institut Laue-Langevin, Grenoble, France). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

Two neutron lifetime experiments with storable neutrons are underway at the Institute Laue-Langevin, Grenoble: one version, prepared at the University of Bonn, will use the improved magnetic storage ring NESTOR on the new vertical guide. A second experiment is based on fluid walled material bottles of different surface to volume ratio. 7 refs., 2 figs.

39143 (NBS/SP—711, pp 63-68) **Correlation coefficients in polarized neutron decay: experiments with PERKEO.** Freedman, S.J. (Argonne National Lab., IL). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

High precision β-asymmetry experiments at the ILL using PERKEO have significantly reduced the error in nucleon vector and axial vector coupling constants. Unlike the direct neutron lifetime measurements, which formerly claimed the smallest errors in g/sub A/g/sub V/, the experiments that have measured the β-asymmetry are in good agreement. 8 refs., 4 figs., 1 tab.

39144 (NBS/SP—711, pp 69-74) **Time reversal invariance in polarized neutron beta decay.** Bowles, T.J. (Los Alamos National Lab., NM). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

The source of CP violation has been the subject of extensive experimental and theoretical work since its discovery in 1964. Measurements of the triple correlation σ/sub n/ (p/sub e/ x p/sub ν/) in polarized neutron beta decay have been carried out in attempts to define the cause of T (and CP) violation. Recent theoretical work has demonstrated the sensitivity of these measurements to CP violation arising in left-right symmetric models of the weak interaction. The status of previous experiments and theoretical work in polarized neutron beta decay is discussed along with plans for an experiment to substantially improve the sensitivity of the measurement of the triple correlation coefficient. 18 refs., 1 fig., 1 tab.

39145 (NBS/SP—711, pp 75-80) **Nucleon-nucleon weak interaction.** Adelberger, E.G. (Univ. of Washington, Seattle). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

The PNC NN interaction provides a unique window on flavor-conserving hadronic weak interactions. The current status of experiment and theory in this area are briefly discussed. 4 refs., 3 figs.

39146 (NBS/SP—711, pp 130-136) **Cold neutrons and neutron oscillations.** Ceolin, M.B. (Universita di Padova, Italy; Istituto Nazionale di Fisica Nucleare, Padova, Italy). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

The problem of neutron-antineutron oscillation experimental detection is discussed after a brief presentation of its phenomenology. Experiments deep underground with neutrons bound in nuclear matter are compared with experiments with artificially produced neutrons. Thermal, cold and ultracold neutrons are considered. It is concluded that cold neutrons, transported from the reactor to the experimental area through totally reflecting guides, reduce basically the radiation background, and allow, the other conditions being the same, a higher sensitivity. Finally some features of the experiment in preparation at the ILL reactor in Grenoble are summarized. 10 refs.

39147 (PITHA—84/17) **Measurement of the photon structure function F_2sup(γ) in the Q^2 range of 1.5-16 GeV^2.** Deuter, A. (Technische Hochschule Aachen (Germany, F.R.). Lehrstuhl fuer Experimentalphysik 3B und 3. Physikalisches Inst.; Technische Hochschule Aachen (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 25 Jun 1984. 115p. (In German). NTIS, PC E11; Available from NTIS as TIB/B86-06564.

1417 events of the deep inelastic electron-photon scattering $e\gamma^+ \rightarrow e^+$ hadrons were measured for the determination of the photon structure function $F_2(X,Q^2)$ in the Q^2 range of $1.5<Q^2<16$ GeV^2. For the presentation of F_2 as function of X the measured quantity Xsub(vis) was transformed to X by outfolding of all detector effects. $F_2(X)$ is shown under inclusion of all events at a fixed $Q^2=5.3$ GeV^2. After partition of the data set into three Q^2 ranges (1.5-3, 3-6, 6-16 GeV^2) $F_2(X)$ at $Q^2=2.4$, 4.3, and 9.2 GeV^2 could be determined for the study of the Q^2 development. The results are well described by a hadronic contribution plus a point-shaped contribution calculated in QCD (next to leading order) both in the X ($0.1< x <0.9$) and in the Q^2 dependence. By a fit of the QCD prediction to the data Asub(anti Manti S) was determined to 210 +- 70(stat.) +- 60(syst.) MeV. Extreme limits for the hadronic model (F_2sup(had)=0, F_2sup(had)=0.2) fix Asub(anti Manti S) model-independently on a range $65<$Asub(anti Manti S)<575 MeV with 90% cl. By these limits αsub(S) can be extrapolated to the momentum transfer which is typical in the e^+e^- annihilation at PETRA

(Q^2=35 GeV^2). By this becomes 0.115<asub(S)<0.170. (orig./HSI).

39148 (TRI-PP—86-21) Searches for lepton flavor violation. Bryman, D. (TRIUMF, Vancouver, British Columbia (Canada)). Apr 1986. 13p. (CONF-860292—3). NTIS (US Sales Only), PC A02/MF A01. File Number DE86901489.

From Lake Louise winter institute in particle physics; Edmonton, Alberta, Canada (16 Feb 1986).

The present status of a selection of important lepton flavor violating (LFV) processes, mainly involving muon number violation, are briefly discussed, with indications of the special attractiveness of each. 44 refs., 11 figs. (LEW)

39149 (TRI-PP—86-22) Constraints on massive neutrinos from $\pi \rightarrow$ e nu decay. Britton, D.I. (TRIUMF, Vancouver, British Columbia (Canada)). Apr 1986. 5p. (CONF-860292—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE86901490.

From Lake Louise winter institute in particle physics; Edmonton, Alberta, Canada (16 Feb 1986).

The positron energy spectrum from $\pi \rightarrow$ e nu decay has been searched looking for evidence of massive neutrinos. A new technique, developed to suppress the dominant π-μ-e decay chain background, has resulted in an order of magnitude improvement in the limits for the neutrino mass range 60 to 130 MeV.

39150 Search for single photons from radiative neutrino or supersymmetric-particle production. Ford, W.T.; Qi, N.; Read, A.L. Jr.; Smith, J.G.; Camporesi, T.; Peruzzi, I.; Piccolo, M.; Hurst, R.B.; Lau, K.H.; Pyrlik, J. (Department of Physics, University of Colorado, Boulder, Colorado 80309). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3472-3475(1 Jun 1986).

A search for single photons produced in association with neutrinos or other weakly interacting neutral particles has been performed in e^+e^- annihilations at $\sqrt{s}$ = 29 GeV with MAC detector at the SLAC e^+e^- storage ring PEP. One event is observed, with 1.1 events expected from the reaction $e^+e^- \rightarrow \nu$nu-bary. The number of neutrino families is restricted to N/sub ν/<17 at the 90% confidence level. Limits on possible masses of supersymmetric electrons (e) and photons (gamma-tilde) are presented. The e mass limit is m/sub e/>48 GeV/c^2 at the 90% confidence level if m/sub e//sub L/ = m/sub e//sub R/ and m/sub gamma-tilde/ = 0. If m/sub e//sub L/>>m/sub e//sub R/, the corresponding limit is m/sub e//sub R/>40 GeV/c^2.

39151 Measurement of the rate of formation of pi-mu atoms in K/sub L/^{0} decay. Aronson, S.H.; Bernstein, R.H.; Bock, G.J.; Cousins, R.D. Jr.; Greenhalgh, J.F.; Hedin, D.; Schwartz, M.; Shea, T.K.; Thomson, G.B.; Winstein, B. (Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3180-3198(1 Jun 1986).

Hydrogenlike atoms consisting of a pion and a muon can be formed in K/sub L/$^0 \rightarrow \pi\mu\nu$ decays. In an experiment at Fermilab, 320 pi-mu atoms were detected and simultaneouly the K/sub L/^{0} flux was monitored by recording ordinary K/sub L/$^0 \rightarrow \pi\mu\nu$ decays. The first measurement of the branching ratio R = Γ(K/sub L/$^0 \rightarrow$pi-mu atom+ν)/Γ(K/sub L/$^0 \rightarrow \pi\mu\nu$) = (3.90 +- 0.39) x 10^{-7} is reported, based on a subset of 155 atoms. This ratio may be sensitive to anomalous interactions between the pion and the muon. In the absence of such interactions, theory predicts R = (4.31 +- 0.06) x 10^{-7}.

39152 Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions. Biswas, N.N.; Ting, S.J.Y.; Mattingly, M.C.K.; Bishop, J.M.; Cason, N.M.; Kenney, V.P.; Ruchti, R.C.; Shephard, W.D.; Neale, W.W.; Elcombe, P.A. (University of Notre Dame, Notre Dame, Indiana 46556). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3167-3171(1 Jun 1986).

Experimental multiplicity distributions scaled in the Koba-Nielsen-Olesen (KNO) form for hadron-nucleus interactions show clear deviations from the scaling distribution observed for hadron-hadron interactions. The deviations become larger as A increases. Our data can be described by a model which invokes the hypothesis that KNO scaling is valid for hadron-nucleus interactions at a fixed impact parameter. In this model, the A dependence of the multiplicity distributions results from the convolution of scatterings at various impact parameters.

39153 Measurement of the resonance parameters and radiative width of the rho$^+$. Huston, J.; Berg, D.; Chandlee, C.; Cihangir, S.; Ferbel, T.; Jensen, T.; Lobkowicz, F.; McLaughlin, M.; Ohshima, T.; Slattery, P. (University of Rochester, Rochester, New York 14627). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3199-3202(1 Jun 1986).

We present the results of new precision measurements of the radiative decay width, total width, and mass of the rho$^+$ meson. These parameters are, respectively, 59.8 +- 4.0 keV, 0.150 +- 0.005 GeV, and 0.771 +- 0.004 GeV, and were extracted from data obtained on the coherent production of rho$^+$ in 200-GeV/c π^+ interactions with nuclear targets.

39154 Production of the f^0 meson in the Double Pomeron Exchange reaction pp->pp$\pi^+\pi^-$ at $\sqrt{s}$=62 GeV. Breakstone, A.; Crawley, H.B.; Firestone, A.; Gorbics, M.S.; Isenhower, L.D.; Lamsa, J.W.; Meyer, W.T.; Campanini, R.; Cuffiani, M.; Fabbri, F. (Ames Lab., IA, USA; Iowa State Univ. of Science and Technology, Ames, USA. Dept. of Physics). *Zeitschrift fuer Physik* [*Sektion*] *C: Particles and Fields;* **31**: No. 2, 185-190(Jun 1986). Contract AC03-76SF00098.

Data are presented for the exclusive reaction pp->pp$\pi^+\pi^-$ at $\sqrt{s}$=62 GeV with two leading protons at large Feynman-x and a centrally produced $\pi^+\pi^-$ system. In this kinematical configuration one expects a substantial contribution from Double Pomeron Exchange, which is a potential source of glueballs. The experiment was performed at the CERN ISR using the Split Field Magnet spectrometer. In the mass range between 1,000 and 1,700 MeV/c^2 the invariant mass distribution for the central PI$^+\pi^-$ system exhibits a very significant signal for the f^0(1270) and no other obvious resonant states.

39155 Search for nonspectator decays of the D^0. Baltrusaitis, R.M.; Becker, J.J.; Blaylock, G.T.; Brown, J.S.; Bunnell, K.O.; Burnett, T.H.; Cassell, R.E.; Coffman, D.; Cook, V.; Coward, D.H. (California Institute of Technology, Pasadena, California 91125; University of California at Santa Cruz, Santa Cruz, California 95064; University of Illinois at Urbana-Champaign, Urbana, Illinois 61801; Stanford Linear Accelerator Center, Stanford, California 94305; University of Washington). *Physical Review Letters;* **56**: No. 20, 2136-2139(19 May 1986). Contract AC03-76SF00515;AC02-76ER01195;AC03-81ER40050;AA03-76SF00034.

The weak hadronic decay D$^0 \rightarrow$K^{0}K$^+$K$^-$ is observed in a data sample of 9.3 pb^{-1} collected with the Mark III detector at the psi(3770) resonance. An analysis of the K$^+$K$^-$ subsystem suggests that while the decay proceeds in part through the K-bar^{0}phi channel, providing evidence for the presence of nonspectator amplitudes in D^0 decays, a significant fraction of the decays occur through both higher- and lower-mass K$^+$K$^-$ systems. A limit is set on the decay D$^0 \rightarrow$K^{0}K^0, also thought to proceed by nonspectator processes.

39156 Direct measurements of charmed-D-meson hadronic branching fractions. Baltrusaitis, R.M.; Becker, J.J.; Blaylock, G.T.; Brown, J.S.; Bunnell, K.O.; Burnett, T.H.; Cassell, R.E.; Coffman, D.; Cook, V.; Coward, D.H. (California Institute of Technology, Pasadena, California 91125; University of California at Santa Cruz, Santa Cruz, California 95064; University of Illinois at Urbana-Champaign, Urbana, Illinois 61801; Stanford Linear Accelerator Center, Stanford, California 94305; University of Washington). *Physical Review Letters;* **56**: No. 20, 2140-2143(19 May 1986). Contract AC03-76SF00515.

A new technique is applied to data collected at the psi(3770) resonance to derive charmed-D-meson branching fractions without

relying on the measurement of D-production cross sections. Measurements are presented for three decay modes of the D^0 ($K^-\pi^+$, $K^-\pi^-\pi^+\pi^+$, and $K^-\pi^+\pi^0$) and four decay modes of the D^+ ($K^-\pi^+\pi^+$, $K^-\pi^+\pi^+\pi^0$, K/sub S/$^0\pi^+$, and K/sub S/$^0\pi^+\pi^0$). The resulting branching fractions are significantly larger than previous measurements.

39157 Lifetime of D⁰ charmed mesons produced in neutrino interactions. Ushida, N.; Kondo, T.; Tasaka, S.; Park, I.G.; Song, J.S.; Hara, T.; Homma, Y.; Tsuzuki, Y.; Fujioka, G.; Fukushima, H. (Department of Physics, Aichi University of Education, Igaya-cho, Kariya-shi, Aichi 448, Japan). *Physical Review Letters;* **56**: No. 17, 1771-1774(28 Apr 1986).

We report final results for the D^0 lifetime measured with a hybrid emulsion spectrometer in the wide-band neutrino beam at Fermilab. In a total of 3886 neutrino and antineutrino interactions located in the emulsion fiducial volume, we have found 58 D^0 decays, from which we determine the lifetime to be (4.3 + 0.7 + 0.1/-0.5-0.2) x 10^{13} s.

39158 Wess-Zumino lagrangian and colored techni-pseudo-Goldstone bosons. McKay, D.W.; Young Binglin. (Kansas Univ., Lawrence, USA. Dept. of Physics and Astronomy; Ames Lab., IA, USA; Iowa State Univ. of Science and Technology, Ames, USA. Dept. of Physics). *Physics Letters [Section] B;* **169**: No. 1, 79-84(20 Mar 1986). Contract W-7405-ENG-82;AC02-79ER10528;FG02-85ER40214.

The construction of the Wess-Zumino type effective action is discussed for color octet techni-pion and techni-eta fields interacting with the light gauge bosons - gluon, photon, Wsup(+-) and Z. The explicit effective lagrangian for the one-pseudoscalar meson sector is displayed. GAMMA(eta->GWW), GAMMA(eta->GGγ) and GAMMA(eta->GGZ) are compared to GAMMA(eta->GZ) to illustrate the predictive content of the lagrangian. (orig.).

(Argonne National Lab., IL (USA); Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Wisconsin Univ., Madison (USA). Dept. of Physics). Apr 1986. Contract W-31-109-ENG-38. 9p. (CONF-860292—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012128.

From Lake Louise winter institute in particle physics; Edmonton, Alberta, Canada (16 Feb 1986).

We investigate signals for winos and zinos when the decays W → wino + photino, Z → wino + antiwino, and W → wino + zino are allowed at proton-antiproton colliders. These processes lead to: (1) monojet and dijet plus missing transverse momentum (p/sub T/) events; (2) various di- and tri-lepton events with little accompanying hadronic activity; and (3) events containing jets plus leptons plus p/sub T/. Absence of such signals may allow new limits to be placed on m/sub wino/ and m/sub zino/ of at least m/sub wino/ + m/sub zino/ ≧ m/sub W/, from CERN collider data. 11 refs., 4 figs.

39160 (DESY—85-110) Two photon radiative widths of light mesons as a test of gauge theories with integrally charged quarks. Field, J.H. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1985. 91p. NTIS (US Sales Only), PC A05/MF A01. File Number DE86752073.

A test is made of the quark charges using the recently measured 2γ widths of the pseudoscalar (π^0,eta,eta') and tensor (A_3,f,f') mesons. The model for GAMMAsub(γγ) is nonrelativistic quarkonium annihilation, including binding and SU(3) breaking corrections. The flavour mixing between the states (eta,eta',iota(1450)) or (f, f', THETA (1720)) is given by a linear quarkonium gluonium mass matrix which includes mass dependent SU(3) breaking corrections. For the pseudoscalars a fit is made to 5 experimental quantities sensitive to flavour mixing but independent of the quark charges. The best fit indicates a significant gluonium amplitude approx.= 0.6 in the eta'. The integral charge quark model is consistent with the measured value of GAMMAsub(γγ) (eta') only for the effective gluon masses <1.0 MeV/c^2 (95% C.L.). Corrections from radial excitations are discussed and it is concluded that a pure quarkonium radial excitation interpretation of the iota is unlikely. In the fractional charge model the measurements of GAMMAsub(γγ)(f,f',A_3) indicate that the f and f' are almost ideally mixed quarkonium states. In gauge integer charge models charged gluon annihilation may give large contributions to GAMMAsub(γγ)(f,f'). Such models are excluded by constraints from the strong decays f,f'->ππ, KK and the experimental upper limit on GAMMAsub(γγ)(THETA)BR(THETA->KK). Comparison of the fitted SU(3) breaking parameters with perturbative QCD expectations suggests Λ = 100 +- 50 MeV/c. (orig.).

39161 (DESY—85-113) Mass generation in composite models. Peccei, R.D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1985. 32p. (CONF-8508151—3). NTIS (US Sales Only), PC A03/MF A01. File Number DE86752064.

From INS international symposium on composite models of quarks and leptons; Tokyo, Japan (13 Aug 1985).

I discuss aspects of composite models of quarks and leptons connected with the dynamics of how these fermions acquire mass. Several issues related to the protection mechanisms necessary to keep quarks and leptons light are illustrated by means of concrete examples and a critical overview of suggestions for family replications is given. Some old and new ideas of how one may actually be able to generate small quark and lepton masses are examined, along with some of the difficulties they encounter in practice. (orig.).

39162 (DESY—85-122) Half integer charged hadrons from higher dimensions. Wetterich, C. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752067.

Certain embeddings of the low energy SU(3)sub(C) x SU(2)sub(L) x U(1)sub(y) gauge group within the higher dimensional symmetry lead to exotic chiral generations in addition to a number of standard generations. We study an example leading to an anomaly free chiral exotic generation consisting of quarks with electric charge +1/6 and -5/6, the corresponding anti quarks and additional integer charged leptons. The most striking prediction from such a compactification would be the existence of stable half integer charged hadrons with mass of order of the Fermi scale. Detection of such particles would be an impressive hint for the existence of more than four dimensions. (orig.).

39163 (DESY—85-124) Strength of glueball interactions. Muenster, G. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Nov 1985. 9p. (CONF-8511196—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE86752068.

From International symposium on the theory of elementary particles; Ahrenshoop, German D.R. (17 Nov 1985).

The interaction strength between glueballs in a pure Yang-Mills theory is characterized by the triple glueball vertex function on-shell. This quantity is estimated by strong coupling methods. The result, which is in agreement with Monte Carlo calculations, indicates a rather strong interaction. Implications concerning finite size effects in mass calculations, the large N limit, and phenomenology of glueballs are discussed. (orig.).

39164 (DESY—85-133) Helicity amplitudes for heavy lepton production in e^+e^- annihilation. Hagiwara, K.; Zeppenfeld, D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Durham Univ. (UK). Dept. of Physics). Dec 1985. 51p. (DTP—85/24). NTIS (US Sales Only), PC A04/MF A01. File Number DE86752075.

Signatures of new heavy lepton pair production in e^+e^- annihilation at TRISTAN/SLC/LEP energies are studied in detail. Complete helicity amplitudes for the 2->6 process e^+e^- -> Lanti L -> (νsub(L)$f_1$anti f_2) (anti νsub(L)$f_3$anti f_4) are given for arbitrary masses of final fermions and for arbitrary vector and axial vector

couplings. Methods to measure the L and νsub(L) masses, and the neutral- and charged-current couplings of L in terms of four-jet and one-lepton-dijet final state distributions are exemplified. Signatures of heavy neutrino-pair production are discussed briefly. A straightforward method for calculating arbitrary tree amplitudes with external fermions and vector bosons of arbitrary masses is presented for completeness. (orig.).

39165 **(DESY—85-134) On the QCD 2->3 contributions to the hadroproduction of heavy quarks.** Glover, E.W.N.; Hagiwara, K.; Martin, A.D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Durham Univ. (UK). Dept. of Physics; Cambridge Univ. (UK). Cavendish Lab.). Dec 1985. 17p. (DTP—85/26; HEP—85/8). NTIS (US Sales Only), PC A02/MF A01. File Number DE86752074.

We examine in detail the use of tree level QCD 2->3 cross-sections for heavy quark production, which are known to give significant contributions to canti c and banti b production at hadron colliders. We present results for the 2->3 contributions which can be reliably calculated from QCD, namely (A) the production of three isolated high psub(T) jets, (B) heavy flavour excitation where only one of the heavy quarks has large Psub(T) and, (C) collinear heavy quark pair production where the pair form a single high psub(T) jet. There are no appreciable 2->3 contributions for t-quark production. (orig.).

39166 **(NBS/SP—711, pp 137-142) Ultracold neutrons and the search for the electric dipole moment of the neutron.** Pendlebury, J.M.; Smith, K.F. (Univ. of Sussex, Brighton, England). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

The present position on the search for the electric dipole moment (EDM) of the neutron is described and likely progress in the immediate future is discussed with reference to the ultracold neutron source requirements. Motivation for this research comes from the theoretical significance of the neutron EDM. Any mechanism which gives rise to an EDM in a free particle must involve the violation of parity P and time reversal symmetry T. The experimental apparatus at the Institut Laue-Langevin is described and problems associated with stability and systematic error are addressed. 15 refs., 3 figs.

39167 **(RAL—85-115) Particle physics and the standard cosmology.** Sarkar, S. (Oxford Univ. (UK). Dept. of Astrophysics; Rutherford Appleton Lab., Chilton (UK)). Dec 1985. 30p. (CONF-8506291—1). Rutherford Appleton Lab., Chilton, Didcot, OXON, OX11 OQX, England. File Number TI86901311.

From ICTP workshop on theoretical physics; Trieste, Italy (1 Jun 1985).

We review the constraints imposed by the standard cosmological model on physics beyond the standard SU(3)/sub C/ x SU(2)/sub L/ x U(1)/sub Y/ model, with particular attention to supersymmetry and supergravity.

39168 **(TRI-PP—86-23) Two photon decay widths of non-standard spin-0 bosons.** Bates, R.; Ng, J.; Kalyniak, P. (Carleton Univ., Ottawa, Ontario (Canada). Dept. of Physics; TRIUMF, Vancouver, British Columbia (Canada)). Apr 1986. 3p. (CONF-860292—4). NTIS (US Sales Only), PC A02/MF A01. File Number DE86901491.

From Lake Louise winter institute in particle physics; Edmonton, Alberta, Canada (16 Feb 1986).

The two photon decay widths of non-standard Higgs bosons are studied in a minimal broken supersymmetry model, and the two Higgs doublet extension of the standard model. A large enhancement of these widths relative to the standard model is possible. Supersymmetry imposes a severe constraint on this possible enhancement. The subsequent upper bounds on Higgs boson production rates via the two photon fusion mechanism are compared for ep and e^+e^- colliders.

39169 **Axion emission rates in stars and constraints on its mass.** Pantziris, A.; Kang, K. (Department of Physics, Brown University, Providence, Rhode Island 02912). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 12, 3509-3518(15 Jun 1986). Contract AC02-76ER03130.

We have calculated in detail the emission rates of the invisible axion of Dine, Fischler, and Srednicki in several representative types of stars and derived upper bounds for its mass. We give, in particular, complete reaction amplitudes and energy rates for axion emission. Our results for the axion mass limits are in qualitative agreement with previous estimates for most of the cases except for the neutron stars which give a stronger bound on the axion mass.

39170 **Signals for composite-W^{+-} production in γp collisions.** Rizzo, T.G. (Ames Laboratory and Department of Physics, Iowa State University, Ames, Iowa 50011). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3224-3227(1 Jun 1986). Contract W-7405-ENG-82.

We examine the possibility of observing the composite structure of W^{+-} bosons photoproduced in γp collisions at high energies through form-factor effects. We find that such processes are sensitive to W^{+-} compositeness scales as high as 3—5 TeV if sufficiently high luminosities are obtainable. Such reactions can be most easily studied by extracting a photon beam of energy ≃10 TeV from the Superconducting Super Collider (SSC) for collisions with a fixed target. This serves to indicate that new physical results are obtainable from the SSC even when used in a fixed-target mode.

39171 **Prediction of the electric form factors of the nucleon.** Mickens, R.E. (Department of Physics, Atlanta University, Atlanta, Georgia 30314). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3321-3323(1 Jun 1986).

We demonstrate that an analytic representation can be derived for the electric form factors of the nucleon which is consistent with the data. We use only known low-momentum-transfer (t = 0) and asymptotic (t→-∞) information on the behavior of these functions.

39172 **Bound on the W-boson electric dipole moment.** Marciano, W.J.; Queijeiro, A. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3449-3452(1 Jun 1986). Contract AC02-76CH00016.

A W-boson electric dipole moment λ/sub W/e/2m/sub W/ can induce fermion electric dipole moments via quantum loop corrections. Updating an analysis by Salzman and Salzman, we estimate this effect and find that the current neutron-electric-dipole-moment bound 'd/sub n/'$< 6 \times 10^{-20}$ e cm implies (barring an unforeseen cancellation) 'λ/sub W/'$< 1 \times 10^{-3}$ or 'd/sub W/'$< 10^{-19}$ e cm. On the basis of this constraint, we conclude that electric-dipole-moment contributions to radiative W-boson processes must be very small and effectively undetectable.

39173 **Quantum-electrodynamic radiative corrections to the decay $\pi 0 \to \gamma e^+ e^-$.** Roberts, L.; Smith, J. (Institute for Theoretical Physics, State University of New York at Stony Brook, Stony Brook, New York 11794-3840). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3457-3460(1 Jun 1986).

The quantum-electrodynamic radiative corrections to both the decay rate for $\pi \to \gamma e^+ e^-$ and the differential spectrum in the invariant mass of the Dalitz pair for experiments with limited geometrical acceptance are calculated.

39174 **Partons in nuclei.** Bickerstaff, R.P.; Birse, M.C.; Miller, G.A. (Institute for Nuclear Theory, Department of Physics, FM-15, University of Washington, Seattle, Washington 98195). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3228-3245(1 Jun 1986).

We study the different explanations of the European Muon Collaboration effect. Although the theoretical models are very sensitive to input free-nucleon structure functions, we find that each has distinctive testable traits. Therefore, we examine different reactions to see which can distinguish the models. Deep-inelastic (anti)neutrino-nucleus scattering data are examined, but we find that

the model differences to be exposed by this process are small. J/psi production in lepton-nucleus collision is, in principle, capable of determining the nuclear gluon distribution, but there are too many difficulties to successfully separate the different models. We find that the Drell-Yan process is better suited than antineutrino scattering to determine the nuclear ocean distributions. These may be studied in an experimentally accessible kinematic region in which a quark from the projectile annihilates with a nuclear antiquark.

39175 **Exotic fermions in E_6 and the anomalous magnetic moments of leptons.** Rizzo, T.G. (Ames Laboratory and Department of Physics, Iowa State University, Ames, Iowa 50011). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3329-3333(1 Jun 1986). Contract W-7405-ENG-82.

The mixing between the exotic fermions and the usual fermions (in E_6 theories) can lead to flavor-changing neutral currents. Such couplings can produce new and potentially large contributions to the anomalous magnetic moments of the electron and muon. We analyze these possibilities and comment on other processes (such as $\mu \rightarrow e\gamma$) which can be used to constrain E_6 theories.

39176 **Possible evidence for dynamical supersymmetry in the hadron spectrum.** Bohm, A. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3358-3367(1 Jun 1986).

A relativistic supersymmetric quantum mechanics is proposed which uses $Osp(1,4) \supset SO(3,2)$ for the spectrum and constrained Hamiltonian quantum mechanics for the dynamics of one-hadron systems. It combines baryon and meson towers into infinite supermultiplets in a way similar to the use of supersymmetries in nuclear physics. The predicted mass formula is fitted to the masses of baryon and meson resonances.

39177 **Inclusive nucleon-nucleus scattering and symmetric-hadron-pair production at high P/sub perpendicular/ in the relativistic quark model.** Khalil, A.E. (Institute of Nuclear and Particle Physics, Department of Physics, University of Virginia, Charlottesville, Virginia 22901). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3274-3278(1 Jun 1986). Contract AS05-78ER05861.

Inclusive cross sections for symmetric hadron pairs at large P/sub perpendicular/ are calculated in the framework of hard-scattering and scale-invariant quark-parton models. Our model does not reproduce the recent anomaly reported by Abramov for the reduction of the A-dependence exponent α for pion pairs produced with transverse momentum beyond 1.5 GeV/c.

39178 **Electromagnetic form factors in the Skyrme model.** Braaten, E.; Tse, S.; Willcox, C. (Department of Physics and Astronomy, Northwestern University, Evanston, Illinois 60201). *Physical Review Letters;* **56**: No. 19, 2008-2011(12 May 1986). Contract FG02-85ER40228.

The electric and magnetic form factors for the nucleon and the N-Δ transition are computed in the semiclassical approximation to the Skyrme model and compared with phenomenological dipole parametrizations. A model-independent relation between the magnetic form factors is obtained. The transverse electric transition form factor is identically zero in this approximation, while the longitudinal form factor is nonzero.

39179 **Laser-induced axion photoproduction.** Brodsky, S.J.; Mottola, E.; Muzinich, I.J.; Soldate, M. (Stanford Linear Accelerator Laboratory, Stanford University, Stanford, California 94305; Institute for Theoretical Physics, University of California, Santa Barbara, California 93106). *Physical Review Letters;* **56**: No. 17, 1763-1766(28 Apr 1986). Contract AC03-76SF00515.

Axion photoproduction, particularly laser and wiggler induced, is suggested as a systematic technique for probing the couplings of new elementary pseudoscalar (or scalar) particles in the megaelectron volt mass range to leptons, photons, and hadronic matter.

39180 **Small-x QCD and the ultra-high energy νN total cross section.** McKay, D.W.; Ralston, J.P. (Kansas Univ., Lawrence, USA. Dept. of Physics and Astronomy; Argonne National Lab., IL, USA. High Energy Physics Div.). *Physics Letters* [*Section*] *B;* **167**: No. 1, 103-107(30 Jan 1986). Contract W-31-109-ENG-38;FG02-85ER40214.

The calculation of the total neutrino-nucleon cross section at energies from 10 to 10^8 TeV is discussed. An extrapolation formula is developed which explicitly shows the enhancement at high energies due to QCD effects at small x. Our cross section is substantially larger than currently used extrapolation formulas. A comment on the possibility of cross-section enhancement by superheavy boson exchange is given and such a mechanism as applied to recent data from Cygnus X-3 is discussed.

REFER ALSO TO CITATION(S) 39144, 39145, 39176

39181 **(DESY—85-101) Large missing psub(T) events and supersymmetry.** Hagiwara, K. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Durham Univ. (UK). Dept. of Physics). Sep 1985. 20p. (CONF-8505229—3; DTP—85/22). NTIS (US Sales Only), PC A02/MF A01. File Number DE86752070.

From New particles conference; Madison, WI, USA (8 May 1985).

Implications of large missing transverse momentum (psub(T)) events at the CERN panti p collider to supersymmetry theories are surveyed. Three popular models where photinos carry missing momentum, A) squark-pair scenario, B) gluino-pair scenario, and C) light-gluino scenario are critically reviewed. Both scenario A and B predict non-back-to-back dijet plus psub(T) events, whereas scenario C predicts monojet dominance at higher psub(T) (> or approx. 40 GeV) and back-to-back dijet events at moderate psub(T). Controversial problems in the light gluino scenario are discussed in detail. A model with neutral Higgsinos from the Z boson decay as the carrier of psub(T) is ruled out by e^+e^- experiments at PETRA. Light Goldstinos can also be a source of psub(T) in models where supersymmetry breaks down in the TeV energy region. If a Goldstino is the only light supersymmetric particle, then the large psub(T) event rate at $\sqrt{s}$=630 GeV is almost four times larger than that at $\sqrt{s}$=540 GeV. If both a Goldstino and a gluino are light (<1GeV), then we expect clean monojets with a quite hard psub(T) spectrum. (orig.).

39182 **(DESY—85-105) Non-perturbative contribution to the vacuum energy in supersymmetric QCD.** Mizrachi, L. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Sep 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752071.

It is shown that instanton-anti-instanton induce a negative infrared finite vacuum energy in massless supersymmetric QCD. In the massive theory the same field configuration induces no vacuum energy because its classical action diverges due to the contribution of the mass term. Only if the scalar field is classically zero (in a background of an instanton-anti-instanton) a vacuum energy is found in the massive theory. However, it is negative and infrared divergent. (orig.).

39183 **(DESY—85-118) On the contribution of torons to the vacuum energy in Super-Yang-Mills theory.** Mizrachi, L. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752066.

Toron's contribution to the path integral in Super-Yang-Mills theory is calculated. A non-zero contribution is that of 3 torons and 3 anti-torons. The vacuum energy, however, is zero if the fluctuation region of the torons is finite. (orig.).

39184 (LA-UR—86-2135) Parity violation in proton-proton scattering at intermediate energies. Yuan, V.; Frauenfelder, H.; Harper, R.W.; Bowman, J.D.; Carlini, R.; MacArthur, D.W.; Mischke, R.E.; Nagle, D.E.; Talaga, R.L.; McDonald, A.B. (Illinois Univ., Urbana (USA); Los Alamos National Lab., NM (USA); Maryland Univ., College Park (USA); Princeton Univ., NJ (USA)). May 1986. Contract W-7405-ENG-36. 6p. (CONF-860575—11). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012402.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

Results of a measurement of parity nonconservation in the anti p-p total cross sections at 800-MeV are presented. The dependence of transmission on beam properties and correction for systematic errors are discussed. The measured longitudinal asymmetry is A/sub L/ = (+2.4 +- 1.1(statistical) +- 0.1(systematic)) x 10^{-7}. A proposed experiment at 230 MeV is discussed. 16 refs., 1 fig.

39185 (NBS/SP—711, pp 81-84) Tests of T-invariance with slow neutrons. Kabir, P.K. (Univ. of Virginia, Charlottesville). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

The polarization of neutrons propagating through a medium with spin-polarization S-vector may undergo precession about and towards [k-vector x S-vector]. Either effect is an unambiguous indicator of T-noninvariance. For S $\geq$ 1, a similar effect, requiring target spin-alignment only, occurs if there are suitable T-nonvariant interactions even if these conserve parity exactly. 10 refs.

39186 (NBS/SP—711, pp 85-89) Parity violation in capture of polarized neutrons. Wilson, R.; Avenier, M.; Bagieu, G.; Hart, R.; Koang, D.H.; Idrissi, M.A.; Vignon, B. (Harvard Univ., Cambridge, MA; Institut des Sciences Nucleaires, Grenoble, France). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

The work of the last five years on capture of polarized nuclei is briefly summarized. The accuracy in H and D is limited by statistical accuracy and therefore the beam intensity. It is shown A/sub γ//sup np/ to be measured to +-3 x 10^{-9} where a significant effects is expected. 10 refs.

39187 (NBS/SP—711, pp 90-94) PNC and TNC rotations of the neutron spin. Heckel, B. (Univ. of Washington, Seattle). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

Parity (P) non-conserving and time reversal symmetry (T) nonconserving forces can give rise to P-odd and T-odd rotations of the neutron spin as the neutron propagates through a material target. Measurements of polarized neutron transmission through heavy nuclear targets have observed enhanced P-odd rotations due to pnc mixing between compound resonances. Similar resonant enhancements are expected for measurements of T-odd neutron spin rotations. Measurements of the P-odd rotation in light nuclear targets (H, D, and ^{4}He) can provide useful information about the nucleon-nucleon weak interaction. 25 refs.

39188 Super-Kac-Moody algebras and supersymmetric 2d-free fermions. Windey, P. (Lawrence Berkeley Lab., CA, USA; California Univ., Berkeley, USA. Dept. of Physics). *Communications in Mathematical Physics;* **105**: No. 4, 511-518(Jul 1986). Contract AC03-76SF00098.

Explicit representations of super-Kac-Moody algebra are constructed in terms of 2d-free fermions which form a non-linear representation of supersymmetry with the fermions grouped with the generators of the algebra into superfields. It is shown how the most general construction of this type corresponds to homogeneous spaces G/H and how supersymmetry alone is responsible for that structure.

39189 Spontaneous breaking of parity in (2 + 1)-dimensional QED. Appelquist, T.; Bowick, M.J.; Karabali, D.; Wijewardhana, L.C.R. (Yale University, Physics Department, New Haven, Connecticut). *Physical Review [Section] D: Particles and Fields;* **33**: No. 12, 3774-3776(15 Jun 1986). Contract AC02-76ER03075.

The spontaneous generation of parity- (P) and time-reversal- (T) violating masses in (2+1)-dimensional QED is studied in the large-N limit, where N is the number of two-component complex fermions. Energy considerations of various symmetry-breaking patterns indicate that P and T are not spontaneously broken, even though masses which individually violate these symmetries are dynamically generated.

39190 Higgs-boson masses in a supersymmetric extension of the standard model. Babu, K.S.; Ma, E. (Department of Physics and Astronomy, University of Hawaii at Manoa, Honolulu, Hawaii 96822). *Physical Review [Section] D: Particles and Fields;* **33**: No. 11, 3334-3337(1 Jun 1986). Contract AM03-76SF00235.

We consider a supersymmetric extension of the standard model with two Higgs-boson doublets and a singlet, and analyze the resulting Higgs-boson mass spectrum from the spontaneous breaking of the gauge symmetry. If we also require the two extra dimensionless couplings in this model to be bounded as functions of the renormalization point for as long as the U(1) gauge coupling is bounded, then at least one physical neutral Higgs boson must have a mass less than 134 GeV, even in the presence of the most general explicit soft breaking of the supersymmetry.

39191 Transverse-polarization effects in e^+e^- collisions: The role of chiral symmetry. Hikasa, K. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706). *Physical Review [Section] D: Particles and Fields;* **33**: No. 11, 3203-3223(1 Jun 1986).

Electrons and positrons in storage rings have natural polarization which is perpendicular to the beam direction. Effects of the transverse polarization to azimuthally integrated cross sections are studied. In the standard model, the polarization does not affect the cross section up to a correction proportional to the electron mass, which is negligible at high energies. This fact is closely related to the chiral symmetry of the standard model. It is not necessarily true if there are new interactions beyond the standard model. Polarization effects in composite and supersymmetric models are studied in detail. New particles such as scalar bosons and excited electrons in composite models can give nonzero polarization effects. In supersymmetric theories, the transverse polarization is useful to probe the mixing of the scalar-electron states. The nonvanishing effects are connected to the breaking of the chiral symmetry by the new interactions.

39192 Supplementary evidence for T violation. Sachs, R.G. (Enrico Fermi Institute and the Department of Physics, The University of Chicago, 5640 South Ellis Avenue, Chicago, Illinois 60637). *Physical Review [Section] D: Particles and Fields;* **33**: No. 11, 3283-3292(1 Jun 1986). Contract AC02-80ER10587.

The only significant experimental evidence for T violation is based on the data on CP violation and other measured properties of the decay amplitudes of neutral K mesons and their combined use in an analysis based on the Bell-Steinberger unitarity relation or its equivalent. It has been pointed out by Kenny and Sachs that there is a technical possibility that this conclusion can be evaded because the argument depends on the assumption that the effective (phenomenological) weak-interaction Hamiltonian from which the decay amplitudes are derived is Hermitian. The purpose of this paper is to show that this assumption can be circumvented by making use of additional data on the unitarity of the decay amplitudes of both the neutral and charged K mesons to establish an upper limit on the magnitude of amplitudes associated with T-invariant anti-Hermitian interactions. It is assumed that the order of magnitude of such terms is in conformity with the values expected on the basis of the usual approximate isotopic spin selection rules for the weak interactions. Then it is found that if all the relevant weak interactions are T invariant, the data on unitarity would place

an upper limit on the CP-violation parameter 'eta/sub +/-' of 'eta/sub +/-' $<0.34 \times 10^{-3}$, which is an order of magnitude smaller than the observed value. It is therefore found that the possibility of including in the analysis a non-Hermitian effective weak Hamiltonian up to the limit permitted by the data on unitarity does not alter the conclusion that T invariance is violated.

39193 **Discriminating horizontal symmetries from operator analysis and proton-decay experiments.** Bandyopadhyay, K.; Ray, A.K.; Sarkar, U. (Department of Physics, Visva-Bharati University, Santiniketan 731235, West Bengal, India). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3293-3305(1 Jun 1986). Contract FG05-85ER40200.

The impact of different horizontal symmetries on nucleon decay is discussed within the framework of the standard and the left-right-symmetric theory. Under very general assumptions of operator analysis, it is demonstrated that U(1)/sub H/, SU(2)/sub H/, SU(3)/sub H//sup V/L, and SU(3)/sub H//sup V/ symmetries predict different nucleon decay modes and, hence, the on-going proton-decay experiments can be used to discriminate among the different horizontal symmetries. Furthermore, it is shown that, under favorable situations, the standard and the left-right-symmetric theory can also be distinguished.

39194 **Lattice gauge-Higgs theories with localxglobal symmetry groups: General properties and exact solutions.** Shrock, R.E. (Physics Department, Ohio State University, Columbus, Ohio 43210; Institute for Theoretical Physics, State University of New York, Stony Brook, New York 11794). *Physical Review Letters;* **56**: No. 20, 2124-2127(19 May 1986). Contract AC02-76ER01545.

We discuss a class of lattice gauge-Higgs models with local x global symmetry groups and present an exact solution for a class of 2D theories. The latter constitute the first nontrivial exactly solved lattice gauge-Higgs models.

(Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik; Humboldt-Universitaet, Berlin (German Democratic Republic). Sektion Physik; Akademie der Wissenschaften der DDR, Berlin-Zeuthen. Inst. fuer Hochenergiephysik). Oct 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752072.

Starting from Monte Carlo generated equilibrium gauge field configurations at $\beta=2.1$ and 2.2 on a 6^4 lattice, representing the physical vacuum, we systematically freeze the quantum fluctuations by means of successive relaxation. The result is that we obtain (approximate) solutions of the classical equations of motion, which turn out to have discrete values of the action in close agreement with the continuum (multi-) instanton solutions. We show that these 'lattice (multi-) instantons' are localized in space-time, that they carry a topological charge /Q/=N and that they give rise to a number of fermion zero modes in accordance with the Atiyah-Singer index theorem. Finally, we estimate the 'background topological susceptibility' from the distribution of lattice (multi-) instantons. (orig./HSI).

39196 **(SLAC-PUB—3961) Superstrings and geometry of superspace.** Dhar, A. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). May 1986. Contract AC03-76SF00515. 13p. (CONF-860175—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012044.

From Tata Institute winter school on theoretical particle physics; Panchgani, India (25 Jan 1986).

These lectures present some recent developments in the σ-model approach to the Green-Schwarzsuperstring. Among the topics included are: (1) interpretation of the free superstring as a flat superspace σ-model; (2) propagation of the superstring in curved superspace; and (3) in the presence of background super Yang-Mills fields. The role of the world-sheet fermionic gauge symmetry needed to ensure consistent coupling to background fields is emphasized. 24 refs.

39197 **Interacting parastrings.** Ardalan, F.; Mansouri, F. (Physics Department, Sharif University of Technology, Tehran, Iran). *Physical Review Letters;* **56**: No. 23, 2456-2458(9 Jun 1986). Contract AC02-76ER02978.

Interacting parastrings offer the alternative of constructing string theories directly in four (as well as a number of other) space-time dimensions. These theories are consistent with Lorentz invariance, Lovelace analyticity, and modular invariance. They are also derivable from actions in light-cone gauge. For supersymmetric parastrings, the corresponding actions are supersymmetric.

39198 **Monte Carlo simulation of jets in the upsilon and t-quarkonium regions.** Ng, C. (Department of Physics, University of Illinois at Urbana-Champaign, 1110 W. Green Street, Urbana, Illinois 61801). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3246-3255(1 Jun 1986). Contract AC02-76ER01195.

We apply Webber's QCD branching Monte Carlo model to study the properties of jets produced in upsilon decay and the nearby continuum e^+e^- annihilations. In general, agreement between the Monte Carlo simulation and data is obtained. More baryons are produced in upsilon decay than in the continuum annihilation because there are more heavy colorless clusters in the configuration of upsilon decay. We then investigate the various decay mechanisms of t-quarkonium. The heavy-particle spectra are found to be quite different for various decay modes of t-quarkonium.

39199 **CP violation and generation mixing.** Gronau, M.; Gupta, V.; Johnson, R.; Schechter, J. (Physics Department, Technion, 32000 Haifa, Israel). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3368-3373(1 Jun 1986). Contract FG02-85ER40231.

We explore the possibility of defining maximal CP violation by requiring that generation mixing disappears when the CP-violating terms go to zero in the standard model. This leads to a family of cases related to "different CP operations being maximized" and corresponding to the existing variety of proposals for mixing matrix parametrizations. A favored choice, useful for model building, seems to emerge.

39200 **Energy and Regge residues in quantum-mechanical "QCD" sum rules.** Durand, B.; Durand, L. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 11, 3441-3448(1 Jun 1986). Contract AC02-76ER00881.

It was shown recently by Fishbane, Kaus, and Gasiorowicz that the residues at the poles of quantum-mechanical two-point functions for arbitrary angular momenta l have an incorrect l dependence when calculated by the sum-rule method used for the analogous problem in QCD. Knowledge of the residues is of interest since they are directly related to particle couplings and decay widths. We develop reliable expressions for the energy and Regge residues using semiclassical methods.

39201 **Quark-Gluon transport theory II. color response and color correlations in a Quark-Gluon plasma.** (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). *Annals of Physics (New York);* **168**: No. 1, 148-181(15 Apr 1986). Contract AC02-76CH00016.

Starting from a classical kinetic description of the quark-gluon plasma, we derive in the linear response approximation the color response function near thermodynamic equilibrium. From its poles the dispersion relations for the collective color modes (one longitudinal and one transverse) are obtained. The absence of Landau damping in the quark-gluon plasma is shown, and other damping mechanisms are discussed. A common misunderstanding concerning Landau damping in an electron plasma at low momenta is clarified. Finally we find the color correlation function in an equilibrium QCD plasma, using the fluctuation-dissipation theorem.

Its relation to the gluon polarization operator in finite temperature QCD is discussed. The coefficient for color transport (color conductivity) is determined within a relaxation time model. Possible applications in the computation of plasma observables are pointed out.

39202 **Phase transitions in a saturating chiral theory of nuclear matter.** (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Annals of Physics (New York);* 168: No. 1, 246-269(15 Apr 1986). Contract AC03-76SF00098.

The formalism of a relativistically covariant saturating chiral field theory of nuclear matter is developed in the mean approximation, and some of the properties are studied. The theory possesses the normal saturated state of nuclear matter. The finite temperature properties are examined. A normal gas-liquid phase equilibrium region exists below T-italic roughly-equal 23 MeV. The maximum mass for a neutron star is calculated, and it lies well above the lower bound set by observation. In the high-temperature regime, there is a second minimum in the free energy, on which branch the effective baryon mass is very small. However, this branch is everywhere mechanically unstable, and so is not a realizable state of the theory. Above a certain critical temperature there is in fact no stable state at low baryon density. There is no density or temperature regime where chiral symmetry is restored.

6455 Scattering Theory

39203 **(N—86-21297) Second quantization techniques in the scattering of nonidentical composite bodies.** Norbury, J.W.; Townsend, L.W.; Deutchman, P.A. (National Aeronautics and Space Administration, Hampton, VA (USA). Langley Research Center). Jan 1986. 18p. NTIS, PC A02/MF A01.

Second quantization techniques for describing elastic and inelastic interactions between nonidentical composite bodies are presented and are applied to nucleus-nucleus collisions involving ground-state and one-particle-one-hole excitations. Evaluations of the resultant collision matrix elements are made through use of Wick's theorem.

39204 **(ECN—182) Processing of double-differential cross sections in the new ENDF-VI format. GROUPXS code description and users' manual.** Gruppelaar, H.; Nierop, D.; Akkermans, J.M. (Netherlands Energy Research Foundation, Petten). Apr 1986. 60p. ECN, P.O. Box 1, 1755 ZG Petten, Netherlands. File Number DE86752541.

For the file handling and processing of the double-differential continuum-emission cross sections stored in the new MF6 format of ENDF-VI a special code has been written. This code named GROUPXS has the following options to treat the energy-angle data that are supposed to be represented by a Legendre-polynomial expansion in the center-of-mass system: (1) Conversion of MF6 data from center-of-mass system to laboratory system, with the possibility to continue the calculation with options (2), (3) or (4). (2) Conversion of Legendre-polynomial representation into point-wise angular data, again in MF6 format. (3) Conversion of data from MF6 into MF4 + MF5 (ENDF-V). (4) Calculation of group constants, scattering matrices and transfer matrices for arbitrary group structures with a fusion micro-flux weighting spectrum (P/sub N/-approximation). The code only treats continuum reaction types that are stored in the MF6 format with the restrictions as specified for the European Fusion File (EFF). These restrictions are not inconvenient for the purpose of fusion-neutronics calculations and they facilitate relatively simple processing. The report contains a code description and a users' manual. 21 refs., 9 tabs.

39205 **(LBL—21336) Heavy ion fusion reactions in perspective.** Randrup, J. (Lawrence Berkeley Lab., CA (USA)). Mar 1986. Contract AC03-76SF00098. 11p. (CONF-860396—10). NTIS, PC A02/MF A01; GPO Dep. File Number DE86011561.

From Symposium on the many facets of heavy ion fusion reactions; Argonne, IL, USA (24 Mar 1986).

An attempt is made to summarize research in heavy ion fusion reactions. Fusion is defined and remarks are made concerning sub- and near-barrier fusion, probing the spin distribution of fusion products, limitations to fusion, quasi-fission reactions, complex-fragment emission, incomplete momentum transfer, models for prequilibrium phenomena, and molecular dynamics. Progress and problems associated with these topics are mentioned. The general importance of this research to other fields is also outlined. (DWL)

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

In this paper we enumerate the wide range of experiments carried out to-date using the Bonse-Hart perfect-silicon-crystal x-ray interferometer; which includes gravitationally-induced quantum interference, the effect of the Earth's rotation on the quantum mechanical phase of the neutron (Sagnac Effect), the observability of 2π-rotation of fermions, spin superposition (Wigner phenomenon), the neutron Fizeau effect, search for quaternions in quantum mechanics, and a search for nonlinear terms in the Schroedinger equation. Plans are underway for a neutron Michelson-Morley experiment, various versions of a Wheeler delayed-choice experiment and for the construction of very large-scale interferometers approaching linear dimensions of 1 meter. 21 refs., 4 figs., 1 tab.

39209 (NBS/SP—711, pp 106-111) **Perfect crystal systems for advanced interferometer and resonator devices.** Rauch, H. (Atominstitut der Oesterreichischen Universitaeten, Vienna, Austria). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

Multi-plate interferometry is discussed in respect to new kinds of phase echo systems and delayed choice experiments. For pulsed sources various resonators systems using crystals are discussed which become more powerful by a combination with active energy shift devices. 25 refs., 5 figs.

39210 **Nuclear physics in the 10—300 MeV energy range using a pulsed white neutron source.** Bowman, C.D.; Wender, S.A.; Auchampaugh, G.F. (Los Alamos National Laboratory, Los Alamos, NM 87545). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 259-273(20 Jan 1985). (CONF-840945—).

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

A new pulsed white neutron source is under construction at the Los Alamos WNR facility. The neutrons are produced by LAMPF proton micropulses striking thick targets of various materials. Beam parameters include energy of 800 MeV, pulse rate of approximately 50,000 Hz, 0.4 nsec pulse width, average current as high as 6μa, and a useful neutron energy range from 3 to 300 MeV. The facility will receive beam approximately 80% of the time LAMPF is operational; it increases by a factor of 1000 the experimental capability over the present system at the WNR when beam intensity, angular distribution, and availability are taken into account. In addition to established white source techniques, the facility is also highly competitive with monoenergetic sources for a wide class of experiments such as neutron capture γ ray spectroscopy and neutron-induced charged particle reactions. The facility should be operational in about nine months. Arrangements are underway to make the facility readily accessible to visiting experiments.

39212 **(KFK—3977) Single nucleon transfer reactions in ^{6}Li+^{6}Li collisions at 156 MeV.** Micek, S.; Klewe-Nebenius, H.; Rebel, H.; Gils, H.J.; Zagromski, S.; Srivastava, D.K. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Uniwersytet Jagiellonski, Krakow (Poland). Inst. Fizyki; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Radiochemie). Oct 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752082.

Single nucleon transfer reactions in collisions of 156 MeV ^{6}Li ions with ^{6}Li nuclei, leading to unstable final nuclei (^{5}Li, ^{5}He) have been experimentally studied. The measured ^{6}Li(^{6}Li, ^{7}Li)^{5}Lisub(gr) and ^{6}Li(^{6}Li, ^{7}Be)^{5}Hesub(gr) differential cross sections have been analysed on the basis of a FR-DWBA procedure, extracting information about the optical potentials acting in the exit channel. (orig.).

39213 **Nuclear wave function considerations in pion photoproduction.** Singham, M.K. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 6, 2194-2196(Jun 1986).

We find that the measured values of the angular distributions for the reaction ^{12}C(γ,π^{+})^{12}B /sub g.s./ can be reasonably well reproduced provided that (i) nuclear wave functions constrained to fit a wide range of weak and electromagnetic data are used and (ii) the Δ-isobar term in the Blomqvist-Laget photoproduction operator is omitted. All calculations were done in the 1p-shell model space, suggesting that core polarization contributions are much smaller than previously estimated.

39214 **Pion single charge exchange on ^{14}C from 35 to 295 MeV.** Ullmann, J.L.; Alons, P.W.F.; Kraushaar, J.J.; Mitchell, J.H.; Peterson, R.J.; Ristinen, R.A.; Knudson, J.N.; Comfort, J.R.; Baer, H.W.; Bowman, J.D. (Department of Physics, University of Colorado, Boulder, Colorado 80309). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 6, 2092-2104(Jun 1986).

The ^{14}C(π^{+},π^{0}) ^{14}N reaction to the isobaric analog state has been studied at pion energies between 35 and 100 MeV as an extension of earlier measurements at 100 to 295 MeV. Absolute differential cross sections were measured over the 0°—25° angular range, except at 49.3 MeV, where the range was extended to 75°. A deep minimum was found in the 0° excitation function near 50 MeV, similar to that in the π^{-}p→π^{0}n excitation function due to the near cancellation of the S- and P-wave contributions. A comparison of the data with several theoretical models is presented.

39215 **(n,p) reaction at zero degrees from ^{12}C, ^{13}C, ^{90}Zr, and ^{209}Bi at 65 MeV.** Ford, T.D.; Brady, F.P.; Castaneda, C.M.; Romero, J.L.; Drummond, J.R.; McEachern, B.; Webb, M.L.; King, N.S.P.; Martoff, J.; Wang, K. (Department of Physics and Crocker Nuclear Laboratory, University of California, Davis, California 95616). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 141-142(20 Jan 1985). (CONF-840945—).

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

The first spectra from the UC Davis cyclotron's zero degree facility for (n,p) scattering have been obtained from ^{12}C, ^{13}C, ^{90}Zr, and ^{209}Bi at an incident neutron energy of 65 MeV. Cross sections for the ground state, the ~4.4 MeV and the GDR are extracted for the carbon isotopes. Two broad resonances in ^{209}Bi at ~7.5 MeV and ~15 MeV and a broad resonance in ^{90}Zr at ~22 MeV are compared with previous work done at Davis away from zero degrees.

39216 **Neutron scattering on deformed nuclei.** Hansen, L.F.; Haight, R.C.; Pohl, B.A.; Wong, C.; Lagrange, C. (Lawrence Livermore National Laboratory, Livermore, CA 94550). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 314-317(20 Jan 1985). (CONF-840945—). Contract W-7405-ENG-48.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

Measurements of neutron elastic and inelastic differential cross sections around 14 MeV for ^{9}Be, C, ^{181}Ta, ^{232}Th, ^{238}U, and ^{239}Pu have been analyzed using a coupled channel (CC) formalism for deformed nuclei and phenomenological global optical model potentials (OMP). For the actinide targets these results are compared with the predictions of a semi-microscopic calculation using Jeukenne, Lejeune, and Mahaux (JLM) microscopic OMP and a deformed ground state nuclear density. The overall agreement between calculations and the measurements is reasonably good even for the very light nuclei, where the quality of the fits is better than those obtained with spherical OMP.

6514 Nuclear Properties And Reactions, A=20-38, Theoretical

39217 (LBL—21452) Microscopic model of nucleus-nucleus collisions. Harvey, B.G. (Lawrence Berkeley Lab., CA (USA)). Apr 1986. Contract AC03-76SF00098. 9p. (CONF-860506—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012019.

From International conference on heavy ion nuclear collisions in the fermi energy domain; Caen, France (12 May 1986).

The collision of two nuclei is treated as a collection of collisions between the nucleons of the projectile and those of the target nucleus. The primary projectile fragments contain only those nucleons that did not undergo a collision. The inclusive and coincidence cross sections result from the decay of the excited primary fragments. 15 refs., 5 figs.

39218 ^{26}Al(n,p)^{26}Mg reaction: Comparison between the Hauser-Feshbach formula and the exact random-matrix result for the cross section. Thomas, J.; Zirnbauer, M.R.; Langanke, K. (Norman Bridge Laboratory of Physics, California Institute of Technology, Pasadena, California 91125). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 2197-2199(Jun 1986).

We have calculated the ^{26}Al(n,p)^{26}Mg reaction rate using an exact expression for the compound-nucleus cross section derived recently by Verbaarschot et al. This reaction is astrophysically important, and it happens to fall in a kinematic regime where the exact expression is expected to yield large deviations from the standard Hauser-Feshbach formula. We find that the exact statistical cross section is 20% lower at energies greater than 300 keV, and drops to 40% lower at 0 energy but still does not describe the available data. These deviations are quite similar to those predicted by the formula of Tepel et al.

39219 Nuclear structure effects in preequilibrium reactions: α-induced reactions on /sup 24,25,26/Mg, ^{27}Al, and ^{28}Si. Machner, H.; Seniwongse, G.; Jahn, P.; Nolte, M.; Rogge, M.; Turek, P. (Institut fuer Kernphysik, Kernforschungsanlage Juelich, D-5170 Juelich, Federal Republic of Germany). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 1931-1942(Jun 1986).

We have measured charged particle spectra from 100 MeV α-induced reactions on targets of /sup 24,25,26/Mg, ^{27}Al, and ^{28}Si. The charged particles are protons, deuterons, tritons, ^{3}He, and α particles. The cross sections were analyzed in the framework of the exciton coalescence model. The data suggest complex particle formation to be independent of individual nuclear structure. The deduced single-particle state densities show strong odd-even effects.

39220 One-nucleon-transfer reactions induced by 352-MeV ^{18}O on ^{28}Si. Fernandes, M.A.G.; Burks, B.L.; Horen, D.J.; Satchler, G.R.; Auble, R.L.; Bertrand, F.E.; Blankenship, J.L.; Ford, J.L.C. Jr.; Gross, E.E.; Hensley, D.C. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 1971-1982(Jun 1986).

The one-nucleon transfer reactions ^{28}Si(^{18}O,^{17}O)^{29}Si and ^{28}Si(^{18}O,^{19}F)^{27}Al have been studied at 352 MeV bombarding energy. Several strong transitions were identified in each reaction and analyzed using the distorted-wave Born approximation. A shallow, surface-transparent optical potential of E-18 type did not give acceptable results, but deeper, more conventional potentials fitted the data without any need for renormalization. Data on the same reactions taken earlier at 56 MeV were reanalyzed and the results compared to the present experiment. The use of the distorted-waves approximation is examined critically.

39221 Energy dependence of the local optical potential for neutron-nucleus scattering. Delaroche, J.P.; Guss, P.P.; Honore, G.M.; Howell, C.R.; Walter, R.L.; Larson, D.C.; Hetrick, D.M.; Harvey, J.A. (Duke University and Triangle Universities Nuclear Laboratory, Durham, NC 27706). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 310-311(20 Jan 1985). (CONF-840945—). Contract AC05-76ER01067.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

A systematic study of the energy dependence of the local neutron optical potential up to 80 MeV has been performed using coupled channels analyses of a large set of neutron scattering and reaction observables.

39222 Neutron, alpha and total widths and spin assignments for resonances in ^{33}S+n from 10—400 keV. Coddens, G.P.; Salah, M.; Harvey, J.A.; Hill, N.W. (Universitaire Instelling Antwerpen, Antwerp, Belgium). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 302-303(20 Jan 1985). (CONF-840945—). Contract AC05-84OR21400.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

The S-33 neutron total cross section has been measured from 10 keV to 1 MeV. Resonance parameters (E/sub n/, Γ/sub n/, Γ/sub α/,J/sup π/) have been derived in the region from 10 keV to 400 keV.

39223 Scattering of polarized and unpolarized neutrons from ^{28}Si and ^{32}S. Howell, C.R. (Duke University and Triangle Universities Nuclear Laboratory, Durham, NC 27705). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 72-89(20 Jan 1985). (CONF-840945—). Contract AC05-76ER01067.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

The most complete set of differential cross sections $\sigma(\theta)$ and vector analyzing power A/sub y/(θ) for neutron scattering from ^{28}Si and ^{32}S over the 8 to 40 MeV energy range has been collected and evaluated. These data have been successfully described with the spherical optical model (SOM) and with phenomenological coupled-channels (CC) calculations. For the case of ^{28}Si, various calculations were performed to determine the sensitivity of the data and calculations to the sign of the potential deformation parameters β_2 and β_4. Comparisons of the present analyses to the corresponding analyses of proton-scattering data have yielded interesting results concerning the magnitudes of the Coulomb corrections to the OM potentials for ^{28}Si and ^{32}S.

39224 Optical models from low-energy s-, p- and d-wave cross sections. Johnson, C.H. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 446-462(20 Jan 1985). (CONF-840945—).

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

From transmission measurements with good resolution at low energies one can obtain data on the optical model potential (OMP) for individual partial waves by first making a multilevel analysis to isolate the partial waves and then averaging for comparison to the OMP. For each J/sup π/ the averaging yields two quantities which are related to the amplitude and phase of the OMP scattering function or, alternatively, to the volume integrals of the real and imaginary potentials. Historically, the experimental averages have been represented by the s- and p-wave strength functions, S_0 and S_1, and the s-wave scattering radius R'. To make full use of data from modern time-of-flight facilities such as ORELA it is necessary to re-examine the averaging procedure in order to extend it upward both in energy and neutron l-value. This averaging is discussed and applied to data on ^{30}Si, ^{32}S, ^{34}S, ^{40}Ca, ^{48}Ca, ^{60}Ni, ^{86}Kr and ^{208}Pb. The resulting OMP shows a systematic real potential with some indication of a parity dependence. The imaginary potential shows considerable fluctuations indicating the importance of nuclear structure at neutron energies below 1 MeV. A coupled channel OMP is also discussed for some of the nuclei.

39225 **(CONF-860528—1) Evolution of nuclear shapes at high spins as determined by lifetime measurements.** Johnson, N. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86011079.

From 8. annual symposium on safeguards and nuclear material management; Copenhagen, Denmark (13 May 1986).

Lifetime measurements of high spin states are obtained by the Doppler-shift recoil-distance method. Transition quadrupole moments are extracted from these data. Expanding on earlier experimental work, lifetime and moment of inertia measurements were made for ^{172}W. The data for transition quadrupole moments for the yrast states reveals an unexpected drop at high spin which can be explained by the simultaneous alignment of h/sub 9/2/ protons and i/sub 13/2/ neutrons. This conclusion is supported by moment of inertia measurements which show evidence of a 3-band crossing. 9 refs., 10 figs., 2 tabs. (DWL)

39226 **Half-life limit for ^{48}Ca($2\beta^-$)^{48}Ti(0_3^+,2997).** Alburger, D.E.; Cumming, J.B. (Brookhaven National Laboratory, Upton, New York 11973). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 6, 2169-2170(Jun 1986). Contract AC02-76CH00016.

Gamma-gamma coincidence data from a previous search for the decay sequence ^{48}Ca(β^-)^{48}Sc(β^-)^{48}Ti, in which a sample containing 3.71 g of ^{48}Ca was counted for 206 days in a HPGe(well-type)-NaI(Tl) detector combination, were reanalyzed to place a half-life limit on ^{48}Ca($2\beta^-$)^{48}Ti(0_3^+, 2997). The signature for this decay would be the detection of 2014-983-keV $\gamma\gamma$ coincidences. An ^{88}Y source was used to establish the $\gamma\gamma$ coincidence efficiency. A lower limit (95% confidence) of T/sub 1/2/>8 x 10^{18} yr was obtained for the partial half-life for the $2\beta^-$ decay of ^{48}Ca to the 2997-keV 0_3^+ level of ^{48}Ti.

39227 **Deep inelastic separated response functions from ^{40}Ca and ^{48}Ca.** Deady, M.; Williamson, C.F.; Zimmerman, P.D.; Altemus, R.; Whitney, R.R. (Department of Physics and Bates Linear Accelerator Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 6, 1897-1904(Jun 1986).

Deep inelastic scattering cross sections have been measured for ^{40}Ca and ^{48}Ca at electron energies between 100 and 375 MeV at scattering angles of 90° and 140°. Longitudinal and transverse response functions at three-momentum transfers between 250 and 410 MeV/c have been extracted using a Rosenbluth separation. The response functions are compared to calculations modeling the nucleus as a noninteracting relativistic Fermi gas. The model is found to agree with the observed transverse response function in the region of expected quasi-free nucleon knockout, but the model overestimates the observed longitudinal response. Comparisons of the response functions of the two isotopes are made, and differences between ^{40}Ca and ^{48}Ca are seen.

39228 **Polarization transfer and the spin-parity composition of the charge-exchange continuum.** Klein, A.; Love, W.G. (Department of Physics and Astronomy, The University of Georgia, Athens, Georgia 30602). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 6, 1920-1930(Jun 1986).

Measured and calculated transverse polarization coefficients are compared at 0° for the reactions ^{90}Zr(p,n), ^{48}Ca(p,n), and ^{40}Ca(p,n) at intermediate incident energies and at negative Q values up to ~50 MeV in an attempt to better understand the spin-parity composition of the charge-exchange continuum. Even at 0° the data indicate a significant amount of natural parity spin-flip strength, and this is supported by our calculations. We also present the predicted polarization transfer coefficient spectrum for the (p,n) reaction on ^{90}Zr at 500 MeV, whose measurement is anticipated in the near future.

39229 **Nuclear Data Sheets for A = 47.** Burrows, T.W. (National Nuclear Data Center, Brookhaven National Laboratory, Upton, NY 11973). *Nuclear Data Sheets;* **48**: No. 1, 1-110(May 1986). Contract AC02-76CH00016.

The 1977 evaluation of A = 47 (77Ha45) has been revised using experimental decay and reaction data received by the cutoff data noted below. See 75Be56 for calculations related to the unobserved nuclides, ^{47}Mn and ^{47}Fe.

39230 **Nuclear data sheets for A = 51.** Chunmei, Z.; Enchen, Z.; Xiane, L.; Junde, H. (Institute of Atomic Energy P. O. Box 275 (41), Beijing, China). *Nuclear Data Sheets;* **48**: No. 1, 111-244(May 1986).

The 1978 nuclear data sheets for A = 51 (78Au01) have been revised on the basis of experimental data available by the cutoff date noted below. The level schemes and decay schemes, and experimental data on which they are presented for all nuclei with mass number A = 51. The experimental data are evaluated; the inconsistencies and discrepancies are noted; and adopted values for levels and γ-ray energies, γ-ray intensities, as well as for the other nuclear properties are given.

39231 **Half life of sup(57)Ni.** Dickens, J.K. (Oak Ridge National Lab., TN, USA). *Journal of Radioanalytical and Nuclear Chemistry;* **103**: No. 5, 273-280(13 Feb 1986).

The half life of sup(57)Ni was measured by Ge(Li) γ-ray spectroscopy. The sup(57)Ni radionuclide was created by bremsstrahlung impinging a sample of elemental Ni. Time change of the activity of the 1377.6 keV γ-ray following decay of sup(57)Ni was analyzed to obtain a half life of 35.54 +- 0.05 h for sup(57)Ni. 8 refs.

39232 **Nuclear structure approach to the imaginary optical potential and inelastic form factor.** Osterfeld, F.; Madsen, V.A. (Institut fuer Kernphysik, KFA Juelich, D-5170 Juelich, West Germany). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 26-49(20 Jan 1985). (CONF-840945—). Contract AT06-79ER10405.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

Microscopic calculations of the second order imaginary optical potential are presented for neutron and proton scattering from spherical target nuclei using random phase approximation transition densities for intermediate excited states. Both inelastic and charge-exchange intermediate states are considered. The contribution of the deuteron channel to the absorption is estimated. The sensitivity of the surface absorption on details of the nuclear structure wave functions is discussed. Calculations are presented for the isoscalar term W_0 of the optical potential, the isovector term W_1 (Lane-term), and the Coulomb correction term ΔW/sub C/. Elastic scattering cross sections are calculated from the microscopic nonlocal potentials and are compared to cross sections which were obtained from the equivalent local potentials. The validity of the local approximation to the nonlocal potential is investigated. The differences and similarities between the nuclear matter approach and the nuclear structure approach to the calculation of the imaginary potential are discussed. The nuclear structure approach is also applied to the calculation of the imaginary inelastic form factor used in inelastic scattering. First results are presented for the ^{48}Ca(p,n)^{48}Sc(O$^+$,E/sub x/ = 6.8 MeV) reaction at an incident energy of 25 MeV.

39233 **d/sub 5/2/-single particle strength in ^{48}Ca+n.** Harvey, J.A.; Johnson, C.H.; Carlton, R.F.; Castel, B. (Oak Ridge National Laboratory, Oak Ridge, TN 37831). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 304-305(20 Jan 1985). (CONF-840945—). Contract AC05-84OR21400.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

The neutron total cross section of ^{48}Ca was measured up to 4 MeV and the data analyzed using an R-matrix code to obtain resonance parameters and potential scattering phase shifts. No s-wave resonances were observed and the small cross section (~0.5 b) at low energy requires a real well depth of 48 MeV. Three strong d-

wave resonances (amounting to 45% of the single particle limit) were found in the 0.8 to 2.0 MeV energy region. Shell-model-in-the-continuum calculations agree with these observations.

39234 (UCRL—94158-Rev.1) Neutron capture cross sections for ^{86}Sr and ^{87}Sr at stellar temperatures. Revision 1. Bauer, R.W.; Mathews, G.J.; Becker, J.A.; Howe, R.E.; Ward, R.A. (Lawrence Livermore National Lab., CA (USA)). 25 Jun 1986. Contract W-7405-ENG-48. 4p. (CONF-860741—1-Rev.1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012354.

From International symposium on weak and electromagnetic interactions in nuclei; Heidelberg, F.R. Germany (1 Jul 1986).

Recent work on s-process nucleosynthesis has focused attention on the investigation of capture cross sections for nuclei in the mass region near the N = 50 closed neutron shell. Of special astrophysical interest are (i) the analysis of the s-process branching through ^{86}Kr as a monitor of stellar neutron density and temperature and (ii) the investigation of the possible chronometric pair ^{87}Rb-^{87}Sr as an independent measure of the age of the galaxy. For both problems the capture cross sections of the two pure s-process nuclei ^{86}Sr and ^{87}Sr have to be known to an accuracy of 5% or better. The current investigation of the neutron capture cross sections for ^{86}Sr and ^{87}Sr was undertaken to extend recent measurements by Walter and Beer to energies below 3.5 keV, where strong resonances are known to exist, and to explore the discrepancy in the results of the Maxwellian averaged capture cross section of ^{87}Sr at kT = 30 keV as reported by previous investigators. 9 refs., 1 fig.

39235 Electroexcitation of giant multipole resonances in ^{63}Cu. Kawazoe, Y.; Miyase, H.; Tsubota, H.; Yokokawa, J.; Oyamada, M.; Torizuka, Y. (Education Center for Information Processing, Tohoku University, Kawauchi, 980 Sendai, Japan). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 1917-1919(Jun 1986).

Giant multipole resonances in ^{63}Cu were investigated by inelastic electron scattering. From a model-dependent analysis assuming resonant parts expressed as a sum of Breit-Wigner shapes and a smooth background, the centroid excitation energies, the widths, and the sum rule depletions were deduced and compared with the results on neighboring isotones. Our results were in excellent agreement with photoreaction data.

39236 Half-life of ^{80}Zn: The first measurement for an r-process waiting-point nucleus. Gill, R.L.; Casten, R.F.; Warner, D.D.; Piotrowski, A.; Mach, H.; Hill, J.C.; Wohn, F.K.; Winger, J.A.; Moreh, R. (Brookhaven National Laboratory, Upton, New York 11973). *Physical Review Letters;* **56**: No. 17, 1874-1877(28 Apr 1986). Contract AC02-76CH00016;W-7405-ENG-82;AC02-79ER10493.

A half-life of 0.55 +- 0.02 s was measured for the neutron-rich fission-product nucleus $_{30}$^{80}Zn$_{50}$. A Q/sub β/ value for the decay of ^{80}Zn of 7.15 +- 0.15 MeV and a level scheme for ^{80}Ga have also been deduced. The properties of this N = 50 waiting-point nucleus are significant for the evaluation of different models of r-process environments and exposure times.

39237 Optical model scattering functions for low energy neutrons on ^{86}Kr. Carlton, R.R.; Harvey, J.A.; Johnson, C.H. (Middle Tennessee State University, Murfreesboro, TN 37312). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 308-309(20 Jan 1985). (CONF-840945—). Contract AC05-84OR21400;AS05-80ER10710.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

Optical scattering functions are deduced from an R-matrix analysis and subsequent averaging of high resolution ^{86}Kr+n transmission data. These functions have been fitted by adjusting the well depths in an optical model with r_0 = r/sub D/ = 1.21 fm, a_0 = 0.66 fm and a/sub D/ = 0.48 fm. The well depths are V_0 = 51.5 MeV and V/sub so/ = 5.5 MeV for l = 1 and V_0 = 48.5 for l = 0. W/sub D/ is about 3.5 MeV for s/sub 1/2/, p/sub 1/2/ and p/sub 3/2/. Each well depth has an uncertainty of about +- 1 MeV.

6517 Nuclear Properties And Reactions, A=90-149, Theoretical

39238 Search for superdeformation effects in ^{144}Gd. Vivien, J.P.; Nourreddine, A.; Beck, F.A.; Byrski, T.; Gehringer, C.; Haas, B.; Merdinger, J.C.; Radford, D.C.; Schutz, Y.; Dudek, J. (Centre de Recherches Nucleaires, 67037 Strasbourg Cedex, France). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 2007-2016(Jun 1986).

Quasicontinuum γ-decay studies of ^{144}Gd have been performed using the ^{120}Sn(^{28}Si, 4n)reaction at 125, 135, 145, and 155 MeV bombarding energies. Angular distribution and multiplicity measurements have been done at the above energies. At 145 MeV bombarding energy, a lifetime measurement has also been performed. Although a collective behavior has been observed, the present data do not give evidence for population of superdeformed rotational bands. Theoretical interpretation using the cranking model with the Woods-Saxon field is given. The effects of temperature and pairing on the superdeformed configuration are discussed; superdeformation effects are predicted to disappear below I~60—70 h when temperature exceeds ~500 keV.

39239 Inelastic proton excitation of high-lying giant resonances. Adams, G.S.; Carey, T.A.; McClelland, J.B.; Moss, J.M.; Seestrom-Morris, S.J.; Cook, D. (Physics Department, University of South Carolina, Columbia, South Carolina 29208). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 2054-2058(Jun 1986).

Inelastic scattering of 800 MeV protons has been studied for targets of ^{208}Pb, ^{144}Sm, and ^{118}Sn. At excitation energies above particle emission threshold a spectrum of giant resonances is clearly in evidence. Angular distributions were extracted for the high-lying peaks (~20 MeV excitation energy) in ^{208}Pb and ^{144}Sm. Collective model distorted-wave Born approximation analyses of these data show that isoscalar octupole and dipole states dominate the spectra.

39240 Nuclear reactions of silver with 0.8-TeV protons. Wang, C.F.; Porile, N.T. (Department of Chemistry, Purdue University, West Lafayette, Indiana 47907). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 2183-2184(Jun 1986).

Cross sections for the formation of radionuclides in the interaction of silver with 0.8 TeV protons have been measured. The results are compared with previously reported data obtained for 300 GeV protons. The ratios of cross sections at the two energies are consistent with unity and are independent of product mass number between A = 7 and 105.

39241 Observations of 'pairing-free' K/sup π/=1$^+$ rotational bands in deformed odd-odd A approx. equal to 100 nuclei. Peker, L.K.; Wohn, F.K.; Hill, J.C.; Petry, R.F. (Brookhaven National Lab., Upton, NY, USA; Ames Lab., IA, USA; Oklahoma Univ., Norman, USA). *Physics Letters* [*Section*] *B;* **169**: No. 4, 323-326(3 Apr 1986).

Rotational bands with K/sup π/=1$^+$ in the odd-odd nuclei $_{39}$/sup 100,102/Y and $_{41}$/sup 102,104/Nb are postulated from β^- decay of their even-even parents. Each two-quasiparticle band has a moment of inertia very close to that of a rigid spheroidal nucleus with deformation β proportional 0.3, hence these bands are nearly 'pairing free'. (orig.).

REFER ALSO TO CITATION(S) 39256

39242 Characterization of isomers in ^{155}Ho. Sood, P.C.; Hoff, R.W.; Sheline, R.K. (Department of Physics, Banaras Hindu University, Varanasi 221005, India; Nuclear Chemistry Division, Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 2163-2168(Jun 1986).

The experimentally known isomers of ^{158}Ho have been characterized by estimating the energies of two-quasiparticle excitations. Included in this modeling is the effect of a residual n-p interaction. A 21-min isomer is assigned the configuration K/sup π/ = 9$^+$ {(7/2)$^-$ [523up-arrow] /sub p/ + (11/2)$^-$ [505up-arrow]/sub n/} and is predicted to lie 180 keV above the 5$^+$ ground state. The antiparallel K/sup π/ = 2$^+$ state of this configuration is assigned to an observed level at 316 keV. The 21-min isomer decays by an allowed unhindered transition to a 2528-keV level in ^{158}Dy for which we confirm the two-quasineutron configuration K/sup π/ = 8$^+$ {(5/2)$^-$ [523arrow-down] /sub n/ + (11/2)$^-$ [505up-arrow]/sub n/}. A 27-min 2$^-$ isomer at 67.3 keV and a 29-ns 5$^-$ isomer at 156.9 keV are assigned the configuration {(7/2)$^+$ [404arrow-down]/sub p/ minus-or-plus(3/2)$^-$ [521up-arrow]/sub n/}. A 1.85-ns 1$^-$ isomer at 139.2 keV is assigned the configuration {(5/2)$^+$ [402up-arrow]/sub p/ + (3/2)$^-$ [521up-arrow]/sub n/} and the K/sup π/ = 4$^-$ member of this Gallagher-Moszkowski pair is predicted to occur at 70 keV. Specific experiments are suggested to verify these predictions.

30243 Inelastic electron scattering from collective levels of ^{154}Gd. Hersman, F.W.; Bertozzi, W.; Buti, T.N.; Finn, J.M.; Hyde-Wright, C.E.; Hynes, M.V.; Kelly, J.; Kovash, M.A.; Kowalski, S.; Lichtenstadt, J. (Department of Physics, University of New Hampshire, Durham, New Hampshire 03824). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 1905-1916(Jun 1986). Contract AC02-76ER03069.

Differential cross sections for elastic and inelastic scattering of electrons by ^{154}Gd have been measured for states below 1 MeV of excitation. Levels of three major collective bands are studied: the 0$^+$, 2$^+$, 4$^+$, and 6$^+$ rotational states; the 2$^+$ gamma vibration; and the 0$^+$ and 2$^+$ beta vibrational levels. This study includes the first electron scattering measurements of a beta vibration. Extraction of these small inelastic cross sections required improvements in momentum resolution and detector response uniformity. Data from the rotational band are compared with axially symmetric Hartree-Fock predictions. Disagreement between the measurements and Legendre projections of the calculated density, particularly for higher multipolarity states, indicates a breakdown in the Hartree-Fock approximation or the rotational model. Small amplitude vibrations of the nuclear shape derived from the measured rotational densities agree well in shape when independently normalized to the cross section strength for both the beta and gamma 2$^+$ vibrations, substantiating their geometrical interpretations. Once transition strength of the beta band is set, however, the strength and shape of the 0$^+$ beta is not correctly predicted, indicating a more complicated configuration.

30244 Evolving collectivity at high spins in ^{157}Er, ^{158}Er, and ^{159}Er. Oshima, M.; Johnson, N.R.; McGowan, F.K.; Baktash, C.; Lee, I.Y.; Schutz, Y.; Ribas, R.V.; Wells, J.C. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 1988-1998(Jun 1986). Contract AC05-84OR21400.

Lifetimes of high-spin states in /sup 157,158,159/Er have been measured following the reaction ^{128}Te(^{34}S,xn) induced by 155-MeV ^{34}S ions. A Doppler-shift recoil-distance device was used and γ-γ coincidences were recorded between five germanium detectors at 90° to the beam direction and a Compton-suppressed Ge detector at 0° to record the shifted and unshifted γ-ray peaks. The results for the ground band of ^{158}Er clearly show increasing collectivity with spin, an effect probably arising from centrifugal stretching for this N = 90 nucleus. In the a band, formed by the alignment of a pair of i/sub 13/2/ neutrons, there is a significant reduction in the collectivity, which appears to have a rotational-frequency dependence similar to that found earlier for ^{160}Yb and interpreted as possibly arising from movement toward triaxiality in the nuclear shape. Four states each in the yrast bands of ^{157}Er and ^{159}Er were also measured, and here, too, a similar reduction of collectivity at higher rotational frequencies is observed.

30245 (CONF-860575—6) Multipole matrix elements for ^{208}Pb. McDaniels, D.K.; Lisantti, J.; Swenson, L.W.; Chen, X.Y.; Bertrand, F.E.; Gross, E.E.; Horen, D.J.; Glover, C.; Haeusser, O.; Hicks, K. (Oregon Univ., Eugene (USA); Oregon State Univ., Corvallis (USA); Oak Ridge National Lab., TN (USA); Simon Fraser Univ., Burnaby, British Columbia (Canada)). 1986. Contract AC05-84OR21400. 3p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86011978.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

New measurements of inelastic proton scattering to low-lying states of ^{208}Pb at 200 and 400 MeV are reported. Deformation lengths extracted from angular distributions for the 3$^-$ (2.614 MeV), 5_1^- (3.198 MeV), 5_2^- (3.209 MeV), 2$^+$ (4.086 MeV) and 4$^+$ (4.324 MeV) states are in good accord with values extracted at other incident proton energies. The fact that the deformation lengths are independent of incident proton energy within experimental uncertainty provides support for the validity of the collective DWBA for medium energy proton scattering to strongly excited states. Advantage is taken of this to extract statistically more precise values of the ratio of neutron to proton multipole matrix elements (M/sub n//M/sub p/). Different methods of determining the appropriate average value of M/sub n//M/sub p/ are discussed. 3 refs., 1 tab.

30246 (CONF-860741—5) Photon decay of giant resonances. Bertrand, F.E.; Beene, J.R.; Halbert, M.L. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86012233.

From International symposium on weak and electromagnetic interactions in nuclei; Heidelberg, F.R. Germany (1 Jul 1986).

The total gamma-decay probability, the ground-state gamma branching ratio, and the branching ratios to a number of low-lying states as a function of excitation energy have been determined in ^{208}Pb to approximately 15 MeV. The total yield of ground-state E2 gamma radiation in ^{208}Pb can only be understood if decay of compound states is considered. Other observations in ^{208}Pb include the absence of a significant branch from the giant quadrupole resonance (GQR) to the low-lying collective states at 2.6 MeV and 4.08 MeV, and a strong branch to a 3$^-$ state at 4.97 MeV. 20 refs., 6 figs., 1 tab.

30247 (HMI-P—6/85-Prepr.) Spectroscopy and measurement of electromagnetic moments in sup(198,200,210)Po. Maier, K.H. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)). 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752084.

The quadrupole coupling constants for the ^{210}Po Isup(π)=8$^+$, 11$^-$, 13$^-$ isomers in Bi have been measured, and Q(11$^-$)=82(2) fm^2 and Q(13$^-$)=90(2) fm^2 normalized to Q(^{210}Po8$^+$)=57 fm^2 are deduced. In beam γ-spectroscopy of sup(198,) ^{200}Po showed the (πh^{2}sub(9/2) 8$^+$) π(hsub(9/2)isub(13/2) 11$^-$) and (visub(13/2) 12$^+$) isomers. The B(E2 8$^+$->6$^+$) and Q(8$^+$) in ^{198}Po to ^{210}Po are discussed, a sudden drop is found for the B(E2) in ^{198}Po. The B(E3, 11$^-$->8$^+$) rises very steeply in the light Po isotopes. 30248 Relativistic effects on spin observables in quasielastic proton scattering. Horowitz, C.J.; Iqbal, M.J. (Laboratory for Nuclear Science and Department of Physics, Center for Theoretical Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 2059-2069(Jun 1986). Contract AC02-76ER03069.

The spin observables in quasielastic proton scattering are calculated in a simple relativistic model where the NN interaction is assumed to depend on the enhancement of the lower components of nucleon wave functions (because of strong nuclear potentials). This enhancement is characterized by an average effective mass M(of (0.8—0.9)M which is calculated in an eikonal model. The M(de-

pendence of the NN interaction is taken from relativistic impulse approximation calculations. The polarization is found to decrease by 40 percent compared to the free NN value at 500 MeV. Next, simple formulas are provided to estimate the effects of spin-orbit potential distortions on spin observables. At 500 MeV and 18.5° in ^{208}Pb, the polarization is decreased by 5 percent while D/sub l/'l and D/sub s/'s are decreased by 15 percent and D/sub n/n is almost unchanged.

39249 Cross section and analyzing power measurements for the giant resonance region in ^{208}Pb with 200-MeV protons. McDaniels, D.K.; Tinsley, J.R.; Lisantti, J.; Drake, D.M.; Bergqvist, I.; Swenson, L.W.; Bertrand, F.E.; Gross, E.E.; Horen, D.J.; Sjoreen, T.P. (University of Oregon, Eugene, Oregon 97403). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 1943-1954(Jun 1986).

The giant resonance region in ^{208}Pb has been studied using inelastic scattering of 200-MeV polarized and unpolarized protons. Both differential cross sections σ(theta) and analyzing power A/sub y/(theta) measurements were made. The isoscalar giant quadrupole resonance at 10.6 +- 0.5 MeV, and the combined isovector giant dipole resonance and isoscalar giant monopole resonance at 14.0 +- 0.6 MeV are clearly observed. Within uncertainties all three giant resonances are in accord with full energy-weighted sum rule depletions, based on comparisons with macroscopic distorted wave Born approximation calculations. Data for a peak at 20.9 +- 1.0 MeV are found to be consistent with an isoscalar giant octupole resonance exhausting 36 +- 12 % of the energy-weighted sum rule strength. A peak located at an excitation energy of 12.0 +- 0.7 MeV is shown to be a 2hω, L = 4 transition depleting 8 +- 3 % of the hexadecapole energy-weighted sum rule strength. The measured reduced transition probability for the 3$^-$ state at 2.614 MeV is consistent both with the accepted value and with results measured at 334 and 800 MeV. Our results for the 3$^-$ state at 2.614 MeV and for the giant quadrupole resonance do not support the anomalous behavior found in earlier studies at 104, 156, and 201 MeV. This shows that the macroscopic distorted wave Born approximation can be used to extract deformation lengths providing meaningful comparison with electromagnetic energy-weighted sum rules for proton inelastic scattering to at least 800 MeV incident proton energy.

39250 Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi. Vulgaris, E.; Grodzins, L.; Steadman, S.G.; Ledoux, R. (Laboratory for Nuclear Science and Physics Department, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 2017-2027(Jun 1986). Contract AC02-76ER03069.

The fusion of the heavy asymmetric systems of ^{16}O, ^{18}O+ ^{208}Pb and ^{15}N, ^{16}O+ ^{209}Bi was studied at bombarding energies near and below the Coulomb barrier. The fusion-fission, transfer, and elastic angular distributions were measured for all four systems. The evaporation residue component of the fusion was measured for only the ^{16}O+ ^{208}Pb→ ^{224}Th reaction; in agreement with statistical model calculations, the cross section for the evaporation residues was found to be negligible compared to the fission, and hence can be ignored in all the systems. The shapes of the fission fragment angular distributions are then a direct measure of the entrance channel spins which lead to fusion. The experimental sub-barrier fusion cross sections are underpredicted by the one-dimensional barrier penetration model in all cases. However, if the zero point motion of the targets is included in the barrier penetration model, the energy dependence of both the total fusion and the fission angular distributions can be explained for the ^{15}N+ ^{209}Bi system alone. To fit the low-energy fusion of the oxygen reactions requires considerably more zero point motion: this being inconsistent with the fact that this effect should be the same in all the reactions. Also, the cross sections measured for the transfer channels were found to exhibit the same trend as the fusion at the lower energies. This correlation suggests that some of the sub-barrier fusion in the oxygen-induced reactions may be due to transfer-related processes.

39251 Phenomenological mapping of the Fermi-surface anomaly with neutron-nucleus collisions. Finlay, R.W.; Annand, J.R.M.; Petler, J.S.; Dietrich, F.S. (Ohio University). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 322-323(20 Jan 1985). (CONF-840945—).

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

Elastic and inelastic neutron scattering data from ^{208}Pb and ^{209}Bi are analyzed.

39252 (GSI—85-64-Prepr.) Sub-Coulomb transfer in ^{238}U+ ^{238}U collisions. Wirth, G.; Bruechle, W.; Bruegger, M.; Fan, W.; Suemmerer, K.; Funke, F.; Kratz, V.; Lerch, M.; Trautmann, N. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Mainz Univ. (Germany, F.R.). Inst. fuer Kernchemie). Dec 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752079.

We report the excitation function and angular distributions for the one-neutron transfer product ^{239}U in the heavy-ion reaction ^{238}U + ^{238}U near and far below the Coulomb barrier. Remarkable deviations from semi-classical expectations are seen for the central collisions. Neither absorption nor transfer fission seem to be adequate explanations. It remains open whether the observed shape of the angular distributions supports the idea of a potential pocket in ^{238}U + ^{238}U collisions or if it is a more general characteristic for sub-Coulomb transfer in very heavy ion reactions. (orig.).

From Symposium in honor of Professor A. Pappas; Oslo, Norway (24 Oct 1985).

The research aims of the Large Einsteinium Activation Program (LEAP) are described. This program is a major initiative to exploit currently existing expertise in heavy element research and the potential for producing very heavy actinide target materials such as 285-day ^{254}Es at the High Flux Isotope Reactor at Oak Ridge National Laboratory. The stated aims of the program are to produce heavy element isotopes, to conduct chemical studies of these isotopes, to study the nuclear properties of such isotopes, and to produce a superheavy element (183 neutrons) by the using a ^{254}Es target and ^{48}Ca projectiles. 13 refs., 2 figs., 2 tabs. (DWL)

39254 Production of cold target-like fragments in the reaction of ^{48}Ca+ ^{248}Cm. Gaeggeler, H.; Bruechle, W.; Bruegger, M.; Schaedel, M.; Suemmerer, K.; Wirth, G.; Kratz, J.V.; Lerch, M.; Blaich, T.; Herrmann, G. (Gesellschaft fuer Schwerionenforschung, D-6100 Darmstadt, Federal Republic of Germany). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 6, 1983-1987(Jun 1986).

Yields for isotopes of Rn through Pu have been measured in the reaction ^{48}Ca+ ^{248}Cm at an energy of 248—263 MeV (1.04—1.10 times the Coulomb barrier). Despite the low bombarding energy, high and essentially constant integral yields of about 1 to 2 mb for the elements Rn through U were observed. There is evidence that these nuclides are produced with little excitation energy.

39255 International program to improve decay data for transactinium nuclides. Helmer, R.G.; Reich, C.W. (Idaho National Engineering Lab., Idaho Falls, USA). *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment;* **242**: No. 3, 475-479(15 Jan 1986). (CONF-850533—).

From 6. symposium on X- and gamma-ray sources and applications; Ann Arbor, MI, USA (21 May 1985).

Also published as report EGG-M--08085; CONF-850533--4.

To help meet an identified need for precise decay data, in 1977 the IAEA organized an international Coordinated Research Program (CRP) to measure and evaluate half-lives and γ- and α-emission probabilities for selected transactinium nuclides of importance for reactor technology. The CRP goals were (1) to determine a list of data that needed improvement, (2) to encourage new measurements, and (3) to evaluate the available data. All three phases of this work are now complete. Our participation in this effort has involved the measurement of γ-ray emission probabilities for sup(232,233,235)U, sup(238,239,240,241)Pu, ^{230}Th and ^{231}Pa, as well as participating in the data evaluation. The γ-emission probabilities were determined from the measurement of γ-emission rates with the goal of obtaining uncertainties of <=1%. γ-measurements were made on calibrated Ge detectors. These calibrations were done by standard methods, generally involving measurements at proportional60 γ-ray energies from 14 to 2700 keV. The efficiency-calibration functions were assigned uncertainties ranging from 2% below 50 keV to 0.50% from 400 to 1400 keV. The determination of the decay rates of the various sources involved several techniques. The ^{239}Pu, ^{238}Pu and ^{240}Pu samples were calibrated by gross α-emission-rate measurements at NBS. The ^{235}U sample was taken from an NBS-calibrated spike solution. The ^{241}Pu and ^{233}U samples were calibrated by isotope-dilution mass spectrometry based on spikes of the calibrated ^{239}Pu, ^{240}Pu and ^{235}U materials. Some of our results are given, together with a comparison of some present and previous results.

39256 (CONF-860575—4) Interacting Boson Model: selected recent developments. Balantekin, A.B. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86011769.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

The Interacting Boson Model is briefly reviewed. Recent applications of this model to the low-lying collective magnetic-dipole excitations and to the spectra of ^{196}Ir are described. 13 refs., 3 figs.

39257 (CONF-8604165—5) Fission process from saddle to scission: a phenomenological perspective. Wilkins, B.D.; Gindler, J.E. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012113.

From International conference on heavy ion physics; Rochester, NY, USA (21 Apr 1986).

The pre-scission kinetic energy and dissipation energy deduced from physical measurements for the fission of ^{230}U are found to be reasonable and consistent with the potential energy difference between the saddle and scission points provided scission is assumed to occur with a finite neck radius of ~2 fm. A nearly linear correlation is observed between the proton odd-even effect in fission and the sum of the excitation energy at the saddle point plus the dissipation energy. Prescission kinetic energies deduced by two methods are shown to agree reasonably well with those calculated with a wall-and-window type dissipation mechanism.

39258 (CONF-8606130—1) Dynamical symmetries for odd-odd nuclei. Balantekin, A.B. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86011770.

From International conference on nuclear structure, reactions, and symmetries; Dubrovnik, Yugoslavia (5 Jun 1986).

Recent work for developing dynamical symmetries and supersymmetries is reviewed. An accurate description of odd-odd nuclei requires inclusion of the fermion-fermion force (the residual interaction) and the distinguishing of fermion configurations which are particle like and those which are hole like. A parabolic dependence of the proton-neutron multiplet in odd-odd nuclei is demonstrated. It is shown that a group structure for Bose-Fermi symmetries can be embedded in a supergroup. These methods are used to predict level schemes for Au-196 and Au-198. 11 refs., 3 figs.

39259 (GSI—85-67-Prepr.) Percolation in finite space. A picture of nuclear fragmentation. Biro, T.S.; Knoll, J.; Richert, J. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Dec 1985. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86752077.

The statistical aspects of cluster distributions as a decisive factor in high energy nuclear fragmentation are studied on a finite lattice model. The qualitative behaviour of the mass spectra is understood in terms of a simple model in which finite space constraints play the main role. Both, the light and the heavy mass sector of the spectrum are derived analytically. In the low density regime the model includes those results of Fisher's condensation theory which are frequently applied to nuclear fragmentation. (orig.).

39260 (GSI—85-69-Prepr.) Monoenergetic positron conversion in heavy ion fragments. Schlueter, P.; Soff, G.; Greiner, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Frankfurt Univ. (Germany, F.R.). Inst. fuer Theoretische Physik). Dec 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752078.

Conversion processes in light nuclei with transition energies above the e^+,e^--pair creation threshold are investigated within an analytical framework. In particular we evaluate the ratio of electron transition probabilities from the negative energy continuum into the atomic K-shell and into the positive energy continuum, respectively. The possible role of monoenergetic positron conversion with respect to the striking peak structures observed in e^+-spectra from very heavy collision systems is examined. (orig.).

39261 (GSI—86-9-Prepr.) Hard photon emission from colliding nuclei. Grosse, E.; Grimm, P.; Heckwolf, H.; Mueller, W.F.J.; Noll, H.; Oskarsson, A.; Stelzer, H.; Roesch, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Technische Hochschule Darmstadt (Germany, F.R.)). Mar 1986. 16p. NTIS, PC E02; Available from NTIS as TIB/B86-06551.

Direct photon emission observed in nucleus-nucleus collisions at intermediate beam energies ($0.3<=\beta<=0.4$) shows some very interesting features, especially when comparing it to pion production in such collisions. Valuable information is gained through the fit of a standard black body radiation formula to the data as well as by a comparison to classical bremsstrahlung theory. A photon production in the early phase of the collision is indicated; in the bremsstrahlung picture this corresponds to a rather sudden slowing down of the relative motion. (orig.).

39262 (LA-UR—86-2217) Nuclear-like states of quark matter. Goldman, T.; Schmidt, K.E.; Stephenson, G.J. Jr. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 4p. (CONF-860575—10). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012431.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

In a world with only one flavor of light quark, QCD suggests that the low energy states of quark matter are similar to nuclei, but are not well represented as collections of baryons. Except for the existence of open nucleon channels, the same would be true for the actual, two-light-flavor world. 3 refs.

39263 Few channel models of nuclear reactions: Proton and deuteron elastic scattering expansions. Kozack, R.; Levin, F.S. (Physics Department, Brown University, Providence, Rhode Island 02912). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 1865-1875(Jun 1986). Contract AC02-76ER03235.

In this paper, an asymmetric, antisymmetrized optical potential formalism is used to derive the low-order terms in multiple-scattering-type expansions for nonrelativistic proton-nucleus and deuteron-nucleus elastic scattering. In particular, the extended Faddeev theory of N-particle collisions is used to obtain the properly symmetrized, two-particle and three-particle contributions in these two cases, where it has been assumed that all potentials are pair interactions. The main purpose underlying the research reported

herein has been to prove that standard results can be obtained from an asymmetric formalism. For the two-particle contributions, the usual t/sup A/rho-type expression is obtained, where t/sup A/ is an antisymmetrized, two-particle transition operator. At this level of approximation, the results for the (d,d) case are the same as for the usual folding model. The three-particle contributions in the nucleon-nucleus case are identical to those of Picklesimer and Thaler, thus further demonstrating that standard results are contained in the asymmetric approach. The antisymmetrized, three-particle contributions to the (d,d) optical potential do not seem to have been previously derived; they are the obvious analog of the nucleon-nucleus results, and are physically reasonable in form. However, at this level of approximation, the (d,d) description is no longer found to be that of a folding model.

39264 **Few channel models of nuclear reactions: Distorted-wave Born approximation for light-ion-induced transfer processes.** Kozack, R.; Levin, F.S. (Physics Department, Brown University, Providence, Rhode Island 02912). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 1876-1887(Jun 1986). Contract AC02-76ER03235.

Standard derivations of the distorted wave Born approximation amplitudes for particle-transfer reactions have always left unanswered two fundamental questions: How can one justify cancellation of the typical, one-body, absorptive-potential counter term, and, which Pauli-principle exchange amplitudes correspond to the standard, nonexchange distorted-wave Born approximation amplitude? This paper provides an answer to these questions. This is accomplished by using a particular type of antisymmetrized, N-particle collision theory to describe the transfer processes. For the reaction (b,a), with the mass of a greater than the mass of b, the extended Faddeev theory of the preceding paper is used, while its time-reversal partner, the precursor form of the Bencze-Redish-Sloan equations, is used for the (a,b) case. They lead to almost identical first-order amplitudes. For all the reactions studied herein, it is found that the form of the nonexchange distorted-wave amplitudes: those that are commonly referred to as distorted-wave Born approximation amplitudes: are essentially the same as are used to fit data. This result is achieved without any need to account for cancellation of a counter term, since none appears, implying an absence of so-called core-excitation effects in first order.

39265 **Heavy ion peripheral collisions at relativistic energies: Theory of giant quadrupole excitation.** Rasmussen, J.O.; Canto, L.F.; Qiu, X. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 2033-2038(Jun 1986). Contract AC03-76SF00098.

The theory of excitation of the giant quadrupole resonance in E/Q = 0.5—2.1 GeV heavy ion collisions is studied. Karol's soft spheres model based on nucleon-nucleon cross sections is generalized to deal with collective excitations in deformed nuclei. The giant quadrupole resonance cross sections are calculated in several cases. The results are shown to be in close agreement with the prediction of Blair's simple diffraction model except for excitation in the light nuclei ^{12}C and ^{16}O. Comparison with ^{16}O fragmentation yield data is made.

39266 **Application of a hot spot model to fragment emission from pion true absorption.** Loveman, R.A. (Nuclear Physics Laboratory, University of Colorado, Boulder, Colorado 80309). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 2209-2211(Jun 1986).

This paper describes the application of a "hot spot" statistical model to the process of pion-induced fragmentation. In other reactions the spectra of pre-equilibrium particles are well described by the evaporation of particles from highly excited subsystems evolving within a cold nuclear system. The model is found to be very successful at describing both the ^3He and ^4He spectra from 160 MeV positive pion absorption on silver and is the first successful application of a statistical model to pion-induced emission of complex particles. The implications this has for the process of pion true aborption are examined.

39267 **Macroscopic model of rotating nuclei.** Sierk, A.J. (Physics Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830; Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] C: Nuclear Physics;* 33: No. 6, 2039-2053(Jun 1986).

I present a macroscopic model for the energy of rotating nuclei which has several refinements relative to the rotating-liquid-drop model. Of most importance are the inclusion of finite-range effects in the nuclear surface energy by means of a Yukawa-plus-exponential potential, finite surface diffuseness effects in the Coulomb energy and in the rotational moments of inertia, and an improved specification of nuclear shapes. With this model I calculate the properties of points of equilibrium corresponding to nuclear ground states and fission saddle points. The results are qualitatively similar to those of the rotating-liquid-drop model, but there are significant quantitative differences in fission-barrier heights and moments of inertia. Fission barriers for nonrotating nuclei are calculated for nuclei with atomic numbers varying from 14 to 117. For rotating nuclei, detailed results are given for the entire range of angular momentum for which a fission barrier exists, for nuclei with atomic numbers from 20 to 100, and for mass numbers which exceed the range of known nuclei. The calculated barriers are lower than liquid-drop-model barriers for lighter nuclei and are consistent with those deduced from experimental fission-fusion data over a wide range of nuclear species. The present calculations indicate that super-deformed rotating ground states, which are predicted in the liquid-drop model, would not survive fission long enough to undergo electromagnetic decay. Multiparameter functions which approximately reproduce the calculated results for barrier heights and moments of inertia are described.

39268 **Atoms, radiation and radiation protection.** Turner, J.E. Elmsford, NY; Pergamon Press (1986). 500p. Pergamon Press, Fairview Park, Elmsford, NY 10523.

This text describes basic atomic and nuclear structure as well as the physical processes that result in the emission of ionizing radiation. In addition, external and internal radiation protection criteria, standards and practices are presented from the standpoint of their underlying physical and biological basis. Contents: About atomic physics and radiation. Atomic structure and radiation. The nucleus and nuclear radiation. Interaction of heavy charged particles with matter. Interaction of beta particles with matter. Phenomena associated with charged particle tracks. Interaction of photons with matter. Neutrons, fission, and criticality. Radiation detection methods. Radiation dosimetry. Chemical and biological effects of radiation. Radiation protection criteria and standards. External radiation protection. Internal radiation protection.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

A review of the evidence that the ratio of neutron and proton multiple matrix elements for collective vibrations in single-closed-shell nuclei differ systematically from N/Z is presented. A theoretical framework is given for understanding the data on the basis of the ideas of core polarization. It follows that nuclear deformation parameters are probe dependent and that analysis of excitations by two different probes such as (p,n') and (n,n') can, in principle, give the ratio M/sub n//M/sub p/. Application is made to first 2^+ states of open shell nuclei. Trends of M/sub n//M/sub p/ for higher 2^+ states are presented. Expected systematics of M/sub n//M/sub p/ ratios for giant isoscalar quadrupole transitions are presented.

39270 **Tests of effective interactions for nucleon scattering and charge exchange below 60 MeV.** Dietrich, F.S.; Petrovich, F. (Lawrence Livermore National Laboratory, Livermore, California 94550). *AIP (American Institute of Physics) Conference Proceedings;* 124: No. 1, 90-106(20 Jan 1985). (CONF-840945—). Contract W-7405-ENG-48.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

Significant progress has been made over the past several years in developing energy- and density-dependent effective interactions and optical potentials based on free nucleon-nucleon potentials. This leads to the hope that the nucleon-scattering reaction mechanism may be well enough known to probe details of nuclear spectroscopy (i.e., transition densities) more accurately than with purely phenomenological approaches. Of particular interest to this conference is the possibility of separating neutron and proton transition densities by comparing proton and neutron scattering, which can be done reliably only if the isovector parts of the effective interaction are well known. This paper attempts to assess the accuracy of presently available interactions through comparisons with elastic and inelastic scattering over a wide mass range, and also with the (p,n) isobaric-analog reaction. Particular emphasis has been placed on the isovector parts of the interaction and on Coulomb corrections by comparing proton and neutron scattering on the same targets. In a number of cases, precise neutron data have been measured to facilitate these comparisons.

39271 Parametric study of dynamic s-process neutron-capture nucleosyntheses: nuclear data needs. Mathews, G.J.; Howard, W.M.; Takahashi, K.; Ward, R.A. (Lawrence Livermore National Laboratory, Livermore, California 94550). *AIP (American Institute of Physics) Conference Proceedings;* **124**: No. 1, 511-514(20 Jan 1985). (CONF-840945—). Contract W-7405-ENG-48.

From Topical conference on neutron-nucleus collisions--a probe of nuclear structure; Glouster, OH, USA (5 Sep 1984).

We summarize the stellar parameters which characterize the s-process σN curve in the framework of models which produce an exponential distribution of exposures by periodic time-dependent neutron irradiations. The optimum parameter space, defined by the best fit to the solar-system σN curve, is distinctively different than the classical smooth monotonically decreasing curve. Constraints are placed on the s-process environment. The needs for better neutron-capture data in various mass regions are highlighted.

39272 Direct nuclear reactions. Glendenning, N.R. Orlando, FL; Academic Press Inc (1983). 392p. Academic Press, Inc., Orlando, Florida 32887.

This book is about the theory of direct nuclear reactions. It emphasizes the microscopic aspects of the reactions and their description in terms of the changes induced in the motions of the individual nucleons by the reaction. However, because collective motion can be accurately described by a few collective parameters. The goal of the book is thus to provide the novice with the means to become competent to do research in direct nuclear reactions and to provide the experienced researcher with a detailed discussion of the advanced topics. Topics covered include: coupled equations and the distorted-wave Born approximation; form factors and their nuclear structure centers; the basis of the optical potential as an effective interaction; reactions such as inelastic single- and two-nucleon transfer reactions; the effect of nuclear correlations; the role of multiple-step reactions; the theory of inelastic scattering and the relationship of the effective interaction to the free one; reactions between heavy ions; the polarizability of nuclear wave functions during a reaction; and the calculation of components of the optical potential arising from specific collective or transfer reactions.

39273 (INDC(CPR)—003/L) Measurement of nonelastic cross section for the elements Cu, Si at 14.9 MeV. Bao Shanglian; Zhong Wenguang; Shi Zhaomin; Tang Guaoyou; Chen Jinxiang; Zhang Chonghou. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee). Aug 1985. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701550.

Nonelastic scattering cross sections for Cu and Si at 14.9 MeV have been measured by using the sphere transmission technique. Corrections have been applied to the data with a simpler method, principally for elastic scattering energy loss and multiple scattering. The results have been compared with others.

39274 (NBS/SP—711, pp 143-148) Superthermal sources of ultra-cold neutrons (UCN). Golub, R. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen, Germany). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

UCN are usually produced from a source in which the neutrons are close to thermal equilibrium with some moderator material. In this paper we review the principles of two types of sources (superfluid Helium and surface film sources) in which this is not the case and which are capable of producing significantly higher UCN intensities than thermal-equilibrium sources. In addition we discuss a method for carrying out the search for a neutron edm directly in the Helium moderator and compare the super-thermal source with a particular type of thermal equilibrium source (Doppler shifter source). Use of these sources for producing continuous beams of UCN (e.g., for interferometers) is also described. 14 refs.

39275 (NBS/SP—711, pp 149-154) Production of slow neutrons using Doppler-shifting from a high-speed rotor and their application in fundamental research. Dombeck, T. (Los Alamos National Lab., NM). Feb 1986. NTIS, PC A08/MF A01. File Number DE86009521. (CONF-8511137—).

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

A high-speed rotor with a Bragg scattering crystal in operation at a pulsed spallation source has produced cold ($v < 30$ m/s) and ultracold neutrons ($v < 7$ m/s) with spatial densities near to those observed at the highest flux reactors. Prospects are discussed for even higher fluxes at the LANSCE facility being commissioned at Los Alamos. Though the rotor is naturally matched to pulsed sources, prospects for producing short bursts, or on the other hand, continuous beams of slow neutrons may have application at reactors as well. 14 refs., 1 fig.

39276 (STRATECH—3-1) Photon absorption graphs: 1 keV to 10 MeV. Bom, V.R.; Hollander, R.W. (Technische Hogeschool Delft (Netherlands)). Jan 1983. 28p. NTIS, PC A03/MF A01.

Photon absorption graphs for H_2 (liquid), He (liquid), Be, C, Al, Ar (gas), Fe, Cu, Ge, Kr (gas), Mo, Sn, Xe (gas), Dy, Aun, Pb, U, NaI, NE102A, Kapton, Mylar, Hostaphan, polyethylene, and BaF_2 are presented.

39277 Energy levels of channeled ions. Nekovic, N. (Boris Kidri Institute of Nuclear Sciences, Belgrade, Yugoslavia; Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review [Section] B: Condensed Matter;* **33**: No. 11, 7488-7493(1 Jun 1986). Contract W-7405-ENG-36.

Energy levels of ions moving along crystal channels are considered. The approach is via an effective Hamiltonian. The calculations are related to an experiment in which resonant coherent excitation of channeled ions was measured. The systems under consideration are 44.16-MeV N^{6+} and 38.28-MeV O^{7+} ions in the <100> channel of an 850-A-thick Au crystal. The distributions of the transition energies were generated by the Monte Carlo method: All possible values of the impact parameter were taken into account. The obtained results are in very good agreement with the results of the experiment.

39278 Equilibration lengths for K-shell charge-exchange processes for fast ions traversing foils - evidence from multiple-scattering distributions and Auger-yield measurements. Kanter, E.P.; Schneider, D.; Gemmell, D.S. (Argonne National Lab., IL). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 735-744(1982). (CONF-820855—). Contract W-31-109-ENG-38.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

Measurements on the angular distributions of fast ions traversing foils show a pronounced dependence of the multiple-scattering widths upon the charge state of the emerging ions. These results can be explained in terms of the large scattering angles achieved by those ions that bear K-vacancies. A quantitative model is described which demonstrates how the memory of K-vacancy producing collisions gives rise to large multiple-scattering widths in spite of apparent charge-state equilibration. These data, together with related measurements on projectile auger-electron yields, permit determination of the equilibration lengths for K-vacancy bearing fractions of ion beams traversing foils. 27 references, 5 figures.

39279 (LA-UR—86-2255) Techniques of absolute low energy x-ray calibration. Day, R.H. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 9p. (CONF-860880—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012426.

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

Recent advances in pulsed plasma research, materials science, and astrophysics have required many new diagnostic instruments for use in the low energy x-ray regime. The characterization of these instruments has provided a challenge to instrument designers and provided the momentum to improve x-ray sources and dosimetry techniques. In this paper, the present state-of-the-art in low energy x-ray characterization techniques is reviewed. A summary is given of low energy x-ray generator technology and dosimetry techniques including a discussion of thin window proportional counters and ionization chambers. A review is included of the widely used x-ray data bases and a sample of ultrasoft x-ray measuring procedures, chopped x-ray source generators, phase sensitive detection of ultralow currents, and angular divergence measurements.

39280 (UCRL—93846) Facilities and techniques for x-ray diagnostic calibration in the 100-eV to 100-keV energy range. Gaines, J.L.; Wittmayer, F.J. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 11p. (CONF-860880—7). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012350.

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

The Lawrence Livermore National Laboratory (LLNL) has been a pioneer in the field of x-ray diagnostic calibration for more than 20 years. We have built steady state x-ray sources capable of supplying fluorescent lines of high spectral purity in the 100-eV to 100-keV energy range, and these sources have been used in the calibration of x-ray detectors, mirrors, crystals, filters, and film. This paper discusses our calibration philosophy and techniques, and describes some of our x-ray sources. Examples of actual calibration data are presented as well.

39281 (LBL—21470) Calculating and predicting the properties of materials. Louie, S.G. (Lawrence Berkeley Lab., CA (USA)). Apr 1986. Contract AC03-76SF00098. 6p. (CONF-8604176—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE86011557.

From Workshop on scientific applications and algorithm design for high speed computing; Champaign, IL, USA (7 Apr 1986).

Using microscopic theory, it is now possible to predict the structures and properties of real materials from first principles. This breakthrough was brought about by recent advances in the theory of the electronic structure of solids and by the availability of supercomputers. Many researchers in the field believe we are at the beginning of an era where we will be capable of designing materials with desirable properties using quantum theory and computers.

39282 (TRI-PP—86-16) New method to calculate the muon polarization function. Celio, M. (TRIUMF, Vancouver, British Columbia (Canada)). Apr 1986. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86901534.

In this paper we report on a new technique developed to study the spin dynamics of a static positive muon interacting with neighboring nuclear spins. The method is based on Trotter formula and leads to exact results even when the dimension of the composite spin system is very large. First results are presented for the case of muons localized at the interstitial octahedral site in copper in an arbitrary magnetic field.

39283 Fracture mechanics model of fragmentation. (Physics Department, University of California, Lawrence Livermore National Laboratory, P. O. Box 808, Livermore, California 94550). *Journal of Applied Physics;* 60: No. 3, 1224-1226(1 Aug 1986). Contract W-7405-ENG-48.

A model of the fragmentation process is developed, based on the theory of linear elastic fracture mechanics, which predicts the average fragment size as a function of strain rate and material properties. This approach permits a unification of previous results, yielding Griffith's solution in the low-strain-rate limit and Grady's solution at high strain rates.

39284 Capillary instabilities in thin films. I. Energetics. Srolovitz, D.J.; Safran, S.A. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Applied Physics;* 60: No. 1, 247-254(1 Jul 1986).

A stability theory is presented which describes the conditions under which thin films rupture. It is found that holes in the film will either grow or shrink, depending on whether their initial radius is larger or smaller than a critical value. If the holes grow large enough, they impinge to form islands; the size of which are determined by the surface energies. The formation of grooves where the grain boundary meets the free surface is a potential source of holes which can lead to film rupture. Equilibrium grain boundary groove depths are calculated for finite grain sizes. Comparison of groove depth and film thickness yields microstructural conditions for film rupture. In addition, pits which form at grain boundary vertices, where three grains meet, are another source of film instability.

39285 Capillary instabilities in thin films. II. Kinetics. Srolovitz, D.J.; Safran, S.A. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Applied Physics;* 60: No. 1, 255-260(1 Jul 1986).

We consider the kinetic evolution of perturbations to thin films. Since all small (nonsubstrate intersecting) perturbations to the film surface decay, we consider the evolution of large perturbations, in the form of a single hole which exposes the substrate. For large holes, the hole radius increases at a constant rate under the assumption of evaporation/condensation kinetics. When the dominant transport mode is surface diffusion, large holes grow with a rate proportional to t/sup -3/4/ [log^{3}(t/ rho^{4}/sub c/)]. Small holes with a radii less than rho/sub c/ shrink, where rho/sub c/ is the film thickness divided by the tangent of the equilibrium wetting angle. The growth of these holes eventually leads to hole impingement which ruptures the film, creating a set of disconnected islands. The relaxation time for these islands to go to their equilibrium shape and size (rho/sub eq/) scales as rho^{3}/sub eq/ or rho^{4}/sub eq/ for evaporation/condensation or surface diffusion kinetics, respectively.

39286 Comparative Monte Carlo and mean-field studies of random-field Ising systems. Grest, G.S.; Soukoulis, C.M.; Levin, K. (Corporate Research Laboratories, Exxon Research and Engineering Company, Annandale, New Jersey 08801). *Physical Review* [*Section*] *B: Condensed Matter;* 33: No. 11, 7659-7674(1 Jun 1986). Contract W-7405-ENG-82.

Site-dependent mean-field theory and Monte Carlo (MC) simulations are used to study and compare random-field Ising ferromagnets (RFIM) and Ising diluted antiferromagnets in a field (DAFF). For short-time-scale simulations the two approaches lead to similar results for the various history-dependent magnetizations, and specific heats and for the metastable ground-state spin configu-

rations. The results are also in reasonable qualitative accord with experiment. Mean-field theory which more readily provides information about free energies is used to compute the phase diagram for two- and three-dimensional random-field systems. Since thermal fluctuations are not important in the equilibrium critical behavior a mean-field approach is expected to contain much of the essential physics. At T = 0, MC simulations corroborate the mean-field results. We distinguish three characteristic field-dependent temperatures which in order of decreasing magnitude are the irreversibility temperature T/sub irr/, the ordering temperature (T/sub c/ or T/sub N/), and the temperature for stability of long-range order (LRO), T/sub s/. T/sub irr/ corresponds to the temperature at which the free-energy surface first develops multiple minima.

39287 (AD-A—166316/0/XAB) Strategy for time-dependent quantum-mechanical calculations using a Gaussian wave-packet representation of the wave function. Annual technical report. (California Univ., Santa Barbara (USA). Quantum Inst.). 15 Sep 1985. 22p. (TR—5). NTIS, PC A02/MF A01.

A methodology for performing time-dependent quantum-mechanical calculations is developed by representing the wave function as a sum of Gaussian wave packets (GWP) each characterized by a set of parameters such as width, position momentum, and phase. The problem of computing the time evolution of the wave function is thus reduced to that of finding the time evolution of the parameters in the Gaussians. The parameter motion is determined by minimizing the error made by replacing the exact wave function in the time-dependent Schroedinger equation with its Gaussian representation approximant. This leads to first-order differential equations for the time dependence of the parameters, and those describing the packet position and the momentum of each packet have some resemblance with the classical equations of motion. The paper studies numerically the strategy needed to achieve the best GWP representation of time-dependent processes. The issues discussed are the representation of the initial wave function, the numerical stability and the solution of the differential equations giving the evolution of the parameters, and the analysis of the final wave function. Extensive comparisons are made with an approximate method which assumes that the Gaussians are independent and their width is smaller than the length scale over which the potential changes.

39288 (FNAL/Pub—86/83-A) Kinematic tests of exotic flat cosmological models. Charlton, J.C.; Turner, M.S. (Fermi National Accelerator Lab., Batavia, IL (USA)). May 1986. Contract AC02-76CH03000. 39p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012302.

Theoretical prejudice and inflationary models of the very early Universe strongly favor the flat, Einstein-deSitter model of the Universe. At present the observational data conflict with this prejudice. This conflict can be resolved by considering flat models of the Universe which possess a smooth component by energy density. We study in detail the kinematics of such models, where the smooth component is relativistic particles, a cosmological term, a network of light strings, or fast-moving, light strings. We also discuss the observational tests which can be used to discriminate between these models. These tests include the magnitude-redshift, lookback time-redshift, angular size-redshift, and comoving volume-redshift diagrams and the growth of density fluctuations.

39289 (FNAL-TM—1402) Scalar potential for charge distributions with ellipsoidal symmetry. Gluckstern, R.L. (Fermi National Accelerator Lab., Batavia, IL (USA)). 20 May 1986. Contract AC02-76CH03000. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012599.

Calculation of the electrostatic scalar potential in ellipsoidal coordinates is outlined. The ellipsoidal coordinate system is described, and the Laplace equation is discussed for this system. Special charge distributions having ellipsoidal symmetry, and therefore most easily treated in ellipsoidal coordinates, are assumed and their scalar potentials calculated, including the ellipsoidal shell, two-dimensional and three-dimensional Gaussian charge distribution, and two-dimensional uniform distribution. 2 refs. (LEW)

39290 Closed, analytic, boson realizations for Sp(4). (Department of Physics, University of Pennsylvania, Philadelphia, Pennsylvania 19104-6396). *Journal of Mathematical Physics (New York);* **27**: No. 8, 1987-1993(Aug 1986).

The problem of determing a boson realization for an arbitrary irrep of the unitary simplectic algebra Sp(2d-italic) [or of the corresponding discrete unitary irreps of the unbounded algebra Sp(2d-italic,R-italic)] has been solved completely in recent papers by Deenen and Quesne [J. Deenen and C. Quesne, J. Math. Phys. 23, 878, 2004 (1982); 25, 1638 (1984); 26, 2705 (1985)] and by Moshinsky and co-workers [O. Castan-tildeos, E. Chaco-acute-accentn, M. Moshinsky, and C. Quesne, J. Math. Phys. 26, 2107 (1985); M. Moshinsky, "Boson realization of symplectic algebras," to be published]. This solution is not known in closed analytic form except for d-italic = 1 and for special classes of irreps for d-italic>1. A different method of obtaining a boson realization that solves the full problem for Sp(4) is described. The method utilizes the chain Sp(2d-italic)⊃SU(2) x SU(2) x xxx x SU(2) (d-italic times), which, for d-italic> or =4, does not provide a complete set of quantum numbers. Though a simple solution of the missing label problem can be given, this solution does not help in the construction of a mapping algorithm for general d-italic.

39291 Class of exactly soluble many-body Hamiltonians. Redondo, A. (Electronics Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *American Journal of Physics;* **54**: No. 7, 643-646(Jul 1986).

A class of exactly soluble N-particle Hamiltonians is presented. The matrix representation of these Hamiltonians, which consists of one- and two-body interactions, is block diagonal. The blocks consist of a finite-dimensional matrices which can be easily diagonalized. An example for a system with two particles is discussed.

39292 Mean power reflection from a one-dimensional nonlinear random medium. Spigler, R. (Courant Institute of Mathematical Sciences, New York University, New York, New York 10012). *Journal of Mathematical Physics (New York);* **27**: No. 7, 1760-1771(Jul 1986). Contract AC02-76ER03077.

A model of wave propagation in a slab 0< or =x< or =L of a nonlinear random medium is considered. The index of refraction is k[1+epsilon-tilde(x,w'u/sup epsilon/(x,L,w)'²)]¹/sup //², where epsilon-tilde(x,α) = εm(x)+ε²[(n(x)= +iδ(x))α+θ(x)+i γ(x)], with ε a small parameter, m,n,δ,θ,γ suitable stochastic processes, u/sup epsilon/(x,L,w) the wave field, and w> or =0 the intensity of nonlinearity. The mean reflected power is evaluated from a certain nonlinear partial differential equation satisfied by the reflection coefficient R/sup epsilon/(L,w).

39293 Nonequilibrium truncation scheme for the statistical mechanics of relativistic matter. Ploszajczak, M.; Rhoades-Brown, M.J. (Niels Bohr Institute, Blegdamsvej 17, DK-2100 Copenhagen O, Denmark). *Physical Review [Section] D: Particles and Fields;* **33**: No. 12, 3686-3696(15 Jun 1986).

In this paper we apply a new self-consistent truncation scheme to the infinite coupled hierarchy of transport equations that describe a relativistic plasma. In particular we describe in detail the truncated transport equations for a charged scalar plasma and a neutral scalar plasma in the pairing-approximation limit. We include a brief discussion of particle production within our language. The quantum-mechanical dynamical equations for a positive-energy electron plasma are also cast in a form suitable for approximation within our truncation scheme.

39294 Sound scattering from a thin rod in a viscous medium. Lin, W.H.; Raptis, A.C. (Components Technology Division, Argonne National Laboratory, 9700 South Cass Avenue, Argonne, Illinois 60439). *Journal of the Acoustical Society of America;* **79**: No. 6, 1693-1701(Jun 1986).

Sound waves incident on a thin elastic rod whose radius is smaller than the wavelength of the incident sound induce flexural and uniform compressional oscillations in the rod. These elastic oscillations, in turn, radiate sound waves into the fluid medium and affect the scattered waves. This paper deals with an analytic study on sound scattering by, and acoustoelastic vibrations of, a thin elastic unbound rod in a viscous fluid. The shear viscosity of the fluid is considered in the solutions to boundary value problems concerning the sound scattering and the elastic response of the rod. Results show that the scattered compressional waves consist of the rigid-rod scattering of compressional waves, monopolar waves due to the uniform pulsating of the rod, and dipolar waves due to the flexural vibration of the rod. The scattered viscous waves consist of the rigid-rod scattering of viscous waves and dipolar waves due to the flexural vibration of the rod. Acoustic resonances occur when the effective inertia force of the rod balances the stiffness force of the rod. The fluid viscosity and the scattering of sound give rise to damping effects for the rod vibrations and signficantly affect the acoustic resonances.

39295 Wave-packet evolution and quantization. Littlejohn, R.G. (Department of Physics, University of California, Berkeley, California 94720). *Physical Review Letters;* **56**: No. 19, 2000-2003(12 May 1986). Contract AC03-76SF00098.

A general relationship is established between wave-packet evolution and quantization in classically integrable systems. Because of wave-packet spreading, one cannot simply take the Fourier transform of the time evolution of a wave packet. Instead, one must propagate the wave packet using the actions as Hamiltonians. The energy eigenvalues which result are the Einstein-Brillouin-Keller values, and new forms for the eigenfunctions appear. These are free of caustic singularities, and represent averages of wave packets over the invariant torus.

39296 Monte Carlo simulation of self-avoiding surfaces in three dimensions. Glaus, U. (Institute of Theoretical Physics, Eidgenoessische Technische Hochschule, Honggerberg, 8093 Zurich, Switzerland). *Physical Review Letters;* **56**: No. 19, 1996-1999(12 May 1986). Contract FG05-84ER45071.

We present a new Monte Carlo algorithm for self-avoiding surfaces in a grand canonical ensemble. The topology of the surfaces is kept planar but the boundary is allowed to fluctuate during the simulation. The measured critical exponents $\nu = 0.504 +- 0.016$, theta = 1.48 +- 0.17 indicate that this model belongs to the universality class of branched polymers in three dimensions.

39297 Precise measurements of optical dispersion using a new interferometric technique. Velsko, S.P.; Eimerl, D. (Lawrence Livermore National Laboratory, Nonlinear Optical Materials Group, P.O. Box 5508, Livermore, California 94550). *Applied Optics;* **25**: No. 8, 1344-1349(15 Apr 1986). Contract W-7405-ENG-48.

Measurements of the dispersion of the refractive index using a nonlinear interferometer are described. A sample of the optical material to be measured is interposed between two optically nonlinear crystals, and a moderately intense laser is passed through the combination. By observing the interference between the second harmonics produced in the two nonlinear crystals, the difference between the refractive indices of the sample at the laser frequency and its second harmonic frequency can be determined very precisely. We have used the interferometer to measure the dispersion in several gases between 1064 and 532 nm. We have also used it to determine the dispersion of two transparent solids. The method can measure the index difference to better than 0.1%, which for gases such as helium represents an absolute accuracy of $\sim 10^{-9}$.

39298 Optics along the Rio Grande Research Corridor. Freese, K. (Los Alamos National Lab.). pp 606 of Southwest conference on optics. SPIE volume 540. Bellingham, WA; SPIE - The International Society for Optical Engineering (1985). (CONF-8503156—).

From Society of Photo-Optical Instrumentation Engineers conference; Albuquerque, NM, USA (6 Mar 1985).

New Mexico's scientific, technological, and educational resources are concentrated along a 300-mile stretch of the Rio Grande, from Los Alamos in the north to the Las Cruces in the south. This area contains two major multidisciplinary national laboratories (Los Alamos and Sandia), three military R & D centers, three state universities, and numerous other technology-based organizations, including a growing number of "high-tech" businesses and industries. The state of New Mexico has initiated a program to develop these resources for economic growth through the establishment of the Rio Grande Research Corridor. Much of the future development along the Corridor will involve optics and optical technologies. This session of the Southwest Conference on Optics reviewed the various projects in the Rio Grande Research Corridor, focusing on applications of optics.

39299 Four-photon resonant third harmonic generation. Smith, A.V. (Sandia National Laboratories, Albuquerque, NM 87185). pp 381-384 of Southwest conference on optics. SPIE Volume 540. Bellingham, WA; SPIE - The International Society for Optical Engineering (1985). (CONF-8503156—). Contract AC04-76DP00789.

From Society of Photo-Optical Instrumentation Engineers conference; Albuquerque, NM, USA (6 Mar 1985).

The phenomenon of resonant enhancement of optical third harmonic generation near four-photon resonances is studied with the goal of understanding the nonlinear processes involved and evaluating them as a means of more efficiently generating coherent vacuum ultraviolet light.

39300 Electron- and photon-stimulated desorption. Knotek, M.L. (Sandia National Labs., Albuquerque, NM). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 772-786(1982). (CONF-820855—). Contract AC04-76DP00789.

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

This paper covers but a few of the salient points which are coming together to suggest that Electron Stimulated Desorption and Photon Stimulated Desorption can contribute greatly to our understanding of surfaces. Specifically, the highly specific local information content of stimulated desorption arises from the intrinsically highly localized processes leading to desorption. Recent examples of near edge and extended range PSD data, together with advances in the interpretation of near edge spectra promise a useful future for these measurements. 71 references, 6 figures.

39301 (ENEA-RT-TIB—85/20) ENA: a program for evaluating exponential integrals. Chiccoli, C.; Landini, P.; Lorenzutta, S.; Premuda, F. (ENEA, Bologna (Italy)). Oct 1985. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86901545.

A formalized description is presented and numerical features are discussed for the ENA, a computer program for the computation of n member sequences of exponential integrals E/sub n/(x) (n greater than or equal to 1, x greater than 0). The main procedure and related sub-procedures are listed along with numerical results. 6 refs., 1 tab.

39302 (ORNL—6207) Quantitative assessment of the effect of partial pivoting in sparse ordinary differential equation solvers. Thompson, S. (Oak Ridge National Lab., TN (USA)). May 1986. Contract AC05-84OR21400. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86012592.

The effect of partial pivoting in automatic ordinary differential equation solvers which utilize sparse matrix techniques is discussed. Two solvers are considered, the well-known LSODES solver and a derivate LSOD28. LSODES uses the Yale Sparse Matrix Package which does not perform partial pivoting. LSOD28 uses the Harwell MA28 Sparse Matrix Package which does perform partial pivoting. Results are presented for a benchmark problem which contains several features typically present in realistic problems. The results demonstrate that both solvers perform satisfactorily. At the same time, they demonstrate the relative effects of partial pivoting for the benchmark problem. In particular, they suggest that partial pivoting substantially improves neither the efficiency nor the reliability of LSODES for such problems. They support the argument that partial pivoting is not necessarily required in adaptive solvers to solve complex problems accurately and efficiently. 13 refs., 15 tabs.

39303 **Class of solvable second-order ordinary differential equations with variable coefficients.** Takayama, K. (Texas Accelerator Center, The Woodlands, Texas 77380). *Journal of Mathematical Physics (New York);* **27**: No. 7, 1747-1749(Jul 1986). Contract AC02-84ER40155.

The problem of solving the second-order ordinary differential equations with variable coefficients of the form $d^2x/dt^2+(q_1(t)+\lambda q_3(t))x = 0$ is treated. It is shown that if the initial equation $d^2x/dt^2+q_1(t)x = 0$ is in analytically solvable form and $q_3(t)$ is the inverse square function of a solution for the nonlinear auxiliary equation $1/2 \times d^2x/dt^2 - 1/4 (dx/dt)^2+q_1(t)x^2 = 1$, there are exact solutions. Using an inner relationship between solutions for the initial equation and the auxiliary equation, an infinite sequence of analytically solvable differential equations is constructed step by step. Typical examples of such a sequence are shown.

39304 **(DOE/ER/40048—156-L6) [John Huizenga's nuclear physics research].** Vandenbosch, R. (Washington Univ., Seattle (USA)). 1986. Contract AC06-81ER40048. 8p. (CONF-8604165—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010440.

From International conference on heavy ion physics; Rochester, NY, USA (21 Apr 1986).

A background of John Huizenga's origins and a brief historical overview of his career are given. A short list of Huizenga's contributions to the field of nuclear physics is presented. These contributions include research concerning spontaneous fission, fission-neutron competition, nuclear level densities, structure of actinide elements by transfer reactions, fission fragment angular distributions, and heavy ion rections. 7 refs., 1 fig., 1 tab. (DWL)

39305 **1986 Richtmyer Lecture: Unification, grand unification, and the unity of physics.** Lederman, L. (Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60510). *American Journal of Physics;* **54**: No. 7, 594-600(Jul 1986).

The relationships among the many specialized areas of physics are discussed. The historical aspects are briefly covered, and the relevance of the superconducting super collider is emphasized.

70 FUSION ENERGY

39306 **(DOE/ER/54025—T2) Cooperation and competition on the path to fusion energy.** (National Research Council, Washington, DC (USA)). 1984. Contract FG05-83ER54025. 139p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE86012270.

The United States, the European Community, and Japan are actively considering whether worthwhile advantages lie in increased cooperation among their respective programs of research and development in magnetically confined fusion. To help answer that question for the United States, this report examines why cooperation is a policy option, what might be done, and how.

7001 Plasma Research

REFER ALSO TO CITATION(S) 39115, 39401, 39414, 39423

39307 **(CONF-860412—12) Confinement of high-density pellet-fueled discharges in TFTR.** Milora, S.L.; Schmidt, G.L.; Bell, M.G.; Bitter, M.; Bush, C.E.; Combs, S.K.; England, A.; Fredrickson, E.; Goldston, R.J.; Grek, B. (Princeton Univ., NJ (USA). Plasma Physics Lab.). 1986. Contract AC05-84OR21400. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012308.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

TFTR pellet injection results reported by Schmidt have been extended to higher density and ntau in plasmas limited by a graphite inner-wall belt limiter. Increased pellet penetration and larger density increases were achieved by operation at reduced plasma current (1.6 MA), minor radius (70 cm), and major radius (235 cm). Under these conditions, beam heating results have been extended to 7 MW.

39308 **(DOE/ER/53194—01) Nonlinear magnetohydrodynamics. Progress report.** Montgomery, D.C. (Dartmouth Coll., Hanover, NH (USA). Dept. of Physics). 1985. Contract FG02-85ER53194. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86012207.

Brief descriptions of work which has been completed on the Nonlinear Magnetohydrodynamics Project are given. These include discussions on plasma fluctuation processes as they affect the transport, confinement and heating of the plasma.

39309 **(DOE/ET/51013—181) Directional asymmetries in the Alcator C edge plasma.** Wan, A.S.; LaBombard, B.; Lipschultz, B.; Yang, T.F. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). May 1986. Contract AC02-78ET51013. 21p. (PFC/CP—86-7; CONF-860522—13). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012256.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

A visual inspection of the full poloidal ring limiters used on Alcator C identifies two directionally asymmetric damage regions: at the inside-top location on the electron side (as defined by plasma current, I/sub p/) and at the inside-bottom location on the ion side. We report direct measurements of both ion and electron edge parameters using Janus, a two-sided, multi-diagnostic edge probe, which also indicates strong directional asymmetries. Higher ion and electron temperatures and densities at the probe location occur on the electron side when the toroidal field (B/sub t/) is antiparallel to I/sub p/. The degree of asymmetry cannot be explained by limiter configuration alone. The direction of B/sub t/ with respect to I/sub p/, and variation of the plasma in-out positions, change the magnitude of asymmetry. A number of mechanisms which may cause the directional asymmetries are examined, including parallel plasma flow and asymmetric perpendicular transport into the collecting flux tubes. Measurements made by DENSEPACK, a full poloidal array of Langmuir probes, show strong poloidal asymmetries in both plasma density and electron temperature throughout the scrape-off region of Alcator C. Such asymmetries may arise from asymmetric perpendicular transport and/or act to drive plasma flows along field lines. Thus, the dependence of the directional asymmetries on the directions of B/sub t/ and I/sub p/ may be explained.

39310 **(DOE/ET/51013—184) Ion and electron parameters in the alcator C tokamak scrape-off region.** Wan, A.S.H. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). May 1986. Contract AC02-78ET51013. 311p. (PFC/RR—86-13). NTIS, PC A14/MF A01; 1; GPO Dep. File Number DE86012587.

Janus is a bi-directional, multi-functional edge probe used to diagnose the ion and electron parameters in the Alcator C tokamak scrape-off region. Two mirror image sets of diagnostics are aligned to face the electron and ion sides along magnetic field lines. Each

set of diagnostics consists of a retarding-field energy analyzer (RFEA), a Langmuir probe, and a calorimeter. The RFEA can alternatively sample both the ion and electron parallel energy distribution functions during a tokamak discharge. From the Langmuir probe, one can infer electron temperature, density, and the plasma floating potential. Simple Langmuir probe theory is found to yield the best agreement between the measured Langmuir probe characteristics and the RFEA-inferred T/sub e/. The calorimeter independently detects the total parallel heat flux incident to an electrically floating plate. The measured sheath transmission coefficient, however, is typically lower than the theoretically predicted value by a factor of ~3. Together these diagnostics enable detailed, localized edge plasma characterization on Alcator C.

39311 (DOE/ET/53018—13) Study of plasma convection and wall interactions in magnetic confinement systems. Final report, December 1, 1984-February 28, 1986. York, T.M. (Pennsylvania State Univ., University Park (USA)). 1 Jun 1986. Contract AC02-76ET53018. 160p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE86011919.

The subject contract research effort was initiated in September 1976 with two specific tasks: (1) to study the fundamental physics of confinement of an alternate concept (i.e., theta pinch based) devices; and (2) to study and to develop new diagnostic systems for use on major experiments at other locations in the country. There has been active collaboration with Los Alamos National Laboratory and Lawrence Livermore National Laboratory; there has been proposed collaboration with Princeton Plasma Physics Laboratory, Fusion Research Center at the University of Texas, and General Atomics.

39312 (KMSF-U—1757) SATIN: a fluid code to study the nonlinear evolution of two-plasmon decay and stimulated Raman scattering. Powers, L.V.; Berger, R.L. (KMS Fusion, Inc., Ann Arbor, MI (USA)). Sep 1985. Contract AC08-82DP40152. 14p. (CONF-8509302—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86011862.

From CECAM workshop on interactions and instabilities in laser plasmas; Orsay, France (16 Sep 1985).

A fluid code SATIN has been developed to study the nonlinear evolution of two-plasmon decay and stimulated Raman scattering. Thresholds and growth rates for the linear phases of the instabilities have been obtained and compared to analytic results. The energy partitioning for saturation by pump depletion has been calculated. The method can be extended to include other nonlinear effects.

39313 (LRP—289/86) Papers contributed to the 13th European conference on controlled fusion and plasma physics by the TCA Group. Schliersee, Germany, April 1986. (Centre de Recherches en Physique des Plasmas, Lausanne (Switzerland)). Apr 1986. 30p. (CONF-860412—Exc.). NTIS (US Sales Only), PC A03/MF A01. File Number DE86901417.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Included are 5 papers presented at the conference. They are: (1) A review of Alfven wave heating, (2) Observation of density fluctuations localized at the resonance layer during Alfven wave heating, (3) Central mass and current density measurements in tokamaks using the discrete Alfven wave spectrum, (4) Characteristics of broadband magnetic and density fluctuations in the TCA tokamak, and (5) Axisymmetric, resistive stability and control studies for the proposed TCV tokamak. (MOW)

39314 (LRP—290/86) Computing of RF heating and current-drive in tokomaks. Appert, K.; Hellsten, T.; Sauter, O.; Succi, S.; Vaclavik, J.; Villard, L. (Ecole Polytechnique Federale, Lausanne (Switzerland)). May 1986. 55p. (CONF-860515—2). NTIS (US Sales Only), PC A04/MF A01. File Number DE86901528.

From EPS conference on computational physics - computing in plasma physics; Partenkirchen, F.R. Germany (13 May 1986).

Two of the technically most developed numerical descriptions of radio frequency waves are discussed:Global-wave and quasilinear codes. The numerical approaches are presented within the physical context. The techniques considered are different finite element methods ranging from cubic Hermite finite elements to the non-conforming "finite hybrid elements". A high efficiency of the latter technique is demonstrated. The applications include Ion-Cyclotron Range of Frequency (ICRF) mode-conversion heating in JET, Alfven Wave Range of Frequency (AWRF) and ICRF Heating in TCV, and runaway production in Lower-Hybrid Range of Frequency (LHRF) ramp-up.

39315 (SAND—86-0039C) Metal impurity release in diverted tokamak discharges. Staudenmaier, G.; Wampler, W.R. (Sandia National Labs., Albuquerque, NM (USA); Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). 1986. Contract AC04-76DP00789. 20p. (CONF-860522—14). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012174.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

Plasma materials interaction at the wall of the main plasma chamber of the divertor tokamak ASDEX was investigated by a combined probe, allowing simultaneous measurements of the erosion rate by neutral particles, and the flux and average energy of neutrals. The erosion was measured by collecting part of the released material on a carbon strip. Subsequent surface analysis was performed by electron induced x-ray analysis. Flux and energy of the impinging neutral particles were measured after each single discharge with an energy resolving carbon resistance probe. Such combined measurements yield the erosion yield being characteristic for the erosion process. Data for ohmic discharges in deuterium and helium are compared. It turns out that the carbon resistance probe is a simple but powerful means to study the metal impurity release from the tokamak walls by charge exchange neutrals.

39316 (UCRL—53727) Alpha particle density and energy distributions in tandem mirrors using Monte-Carlo techniques. Kerns, J.A. (Lawrence Livermore National Lab., CA (USA)). May 1986. Contract W-7405-ENG-48. 218p. NTIS, PC A10/MF A01; 1; GPO Dep. File Number DE86012464.

We have simulated the alpha thermalization process using a Monte-Carlo technique, in which the alpha guiding center is followed between simulated collisions and Spitzer's collision model is used for the alpha-plasma interaction. Monte-Carlo techniques are used to determine the alpha radial birth position, the alpha particle position at a collision, and the angle scatter and dispersion at a collision. The plasma is modeled as a hot reacting core, surrounded by a cold halo plasma (T ~50 eV). Alpha orbits that intersect the halo lose 90% of their energy to the halo electrons because of the halo drag, which is ten times greater than the drag in the core. The uneven drag across the alpha orbit also produces an outward, radial, guiding center drift. This drag drift is dependent on the plasma density and temperature radial profiles. We have modeled these profiles and have specifically studied a single-scale-length model, in which the density scale length (r/sub pD/) equals the temperature scale length (r/sub pT/), and a two-scale-length model, in which r/sub pD//r/sub pT/ = 1.1.

39317 Radio-frequency-induced current and transport in toroidal plasmas. Antonsen, T.M. Jr.; Yoshioka, K. (Laboratory for Plasma and Fusion Energy Studies, University of Maryland, College Park, Maryland 20742). *Physics of Fluids;* **29**: No. 7, 2235-2248(Jul 1986). Contract AC05-84ER53170.

The theory of current generation and transport in toroidal geometry as a result of the absorption of high-frequency waves is developed. The radial particle and heat fluxes as well as the parallel current are given in terms of velocity moments of the RF-induced velocity space particle flux. The radial flux can be separated into classical and neoclassical parts. It is suggested that the absorption of RF can be used to control impurity transport.

39318 Nonlinear diocotron mode. Prasad, S.A.; Malmberg, J.H. (University of California at Los Angeles, Los Angeles, California 90024). *Physics of Fluids;* **29**: No. 7, 2196-2201(Jul 1986). Contract AM03-76SF00010.

A perturbation procedure for the construction of a nonlinear diocotron mode of an infinite length cylindrical pure electron plasma column is presented. The plasma is modeled as a cold fluid executing E x B drift in a strong axial magnetic field. The mode has no axial variation and depends on θ (azimuthal angle) and t (time) through the combination θ-Ωt. Thus the potential and the density are stationary in the frame rotating with angular frequency Ω. In this frame, the potential satisfies the relation del^{2}phi = F(phi) where F is a function of phi only. This equation is solved perturbatively to determine a nonlinear mode supported by a cylindrically symmetric equilibrium density profile. The properties of the mode depend only on the offset of the plasma column from the axis of the bounding conducting cylinder and the frequency of the mode is larger than the value predicted by linear theory by an amount roughly proportional to the square of the offset.

39319 Fiber-optic heterodyne phase-shift measurement of plasma current. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Applied Optics;* **25**: No. 11, 1770-1774(1 Jun 1986).

By combining twisted optical sensing fiber and heterodyne phase detection of circular birefringence we have (a) overcome the distortion problem caused by residual linear birefringence in the Faraday rotation method of measuring enclosed current and (b) used only a single output detector without requiring intensity normalization. Resolution of 400 ampere-turns has been obtained in the hostile electromagnetic environment of a working thermonuclear fusion research device. The fiber was simply wound around the existing machine. The measured values are in excellent agreement with those of the electrical Rogowski coil installed when the machine was built.

39320 Equipotential surfaces in the Proto-Cleo Torsatron. Trost, P.K.; Shohet, J.L. (Torsatron/Stellarator Lab., Univ. of Wisconsin-Madison, Madison, WI 53706). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-14**: No. 3, 215-219(Jun 1986).

Plasma potential measurements are made in electron cyclotron resonance plasmas in the Proto-Cleo Torsatron with an emissive probe. Plots of equipotential surfaces are presented and compared with the numerical calculated vacuum magnetic surfaces.

39321 Transport effects of interacting hot and cold electrons in laser-heated plasmas. Campbell, P.M. (KMS Fusion, Inc., Ann Arbor, MI 48106). *Fusion Technology;* **9**: No. 3, 391-400(May 1986).

The observation that heat flux anomalies may be related to laser intensity with a threshold of $\approx 1 \times 10^{14}$ W/cm^2 suggests that hot electrons, which become significant for values of $I\lambda^2$ above this threshold, may be a factor in the observed reduction of thermal heat flow. A formulation of heat transport in plasmas with a two-component electron distribution is developed, and solutions are found that are valid in large gradients. Specific transport effects arising from the hot and cold electron interaction are demonstrated in sample calculations. It is found that when the interaction between the two electron groups is considered in conjunction with the properties of hot electron formation, many of the heat flow anomalies observed in experiments can be explained.

39322 Infrared thermography of first wall components on the Tandem Mirror Experiment Upgrade. Watkins, J.G.; Dykhuizen, R.C.; Hsu, W.L.; Hill, D.N.; Allen, S.L. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 3, 1207-1209(May 1986). Contract AC04-76DP00789;W-7405-ENG-48.

Infrared thermography in the 8—12 μ wavelength range was used to measure surface heating on the low energy neutral source (LENS) plates in the Tandem Mirror Experiment Upgrade (TMX-U). A surface temperature rise of 3.5 °C was observed at the plasma edge during discharges lasting 70 ms with edge densities of approximately 10^{13} cm^{-3}. However, surface heating appeared to be nonuniform azimuthally in that the bottom plates showed a greater temperature rise. A few seconds after the termination of the discharge an axial view of the TMX-U revealed an additional form of surface heating. This is consistent with observations from the x-ray diagnostic which showed that a significant concentration of energetic electrons remained after the bulk thermal plasma had disappeared; these electrons disappeared only after the magnets were turned off. Details of the experiment and our experiences with this diagnostic tool will be presented.

39323 Long-term changes in the sensitivity of quadrupole mass spectrometers. Blanchard, W.R.; McCarthy, P.J.; Dylla, H.F.; LaMarche, P.H.; Simpkins, J.E. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 3, 1715-1719(May 1986). Contract AC02-76CH03073.

We routinely use quadrupole mass spectrometers (QMS) to monitor vacuum conditions, gas purity, and plasma—wall interactions in the Tokamak Fusion Test Reactor (TFTR) at Princeton. Two QMS systems have been operating on TFTR continuously for a 2 year period. Both QMS systems are absolutely calibrated at weekly intervals using a six-part standard gas mixture. The calibration procedure is based on the use of transfer standards (ion gauge and capacitance manometer) that are calibrated against a primary standard (spinning rotor gauge) on an external vacuum system. We have identified variations in the efficiency of the QMS ionizer and drifts in the sensitivity of the electron multiplier ion detector to be the major reasons for the observed changes in overall QMS sensitivity. Weekly variations in sensitivity greater than 100% have been observed following system bakeout at 150°C and with the use of rhenium filaments which were initially in the QMS ionizer. Operation of the QMS system with tungsten filaments and at constant temperature has yielded more stable operation with weekly sensitivity changes generally being less than 10%.

39324 Operation of cold-cathode magnetron gauges in high magnetic fields. Thomas, S.R. Jr.; Goerz, D.A.; Pickles, W.L. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 3, 1736-1739(May 1986). Contract W-7405-ENG-48.

The Mirror Fusion Test Facility (MFTF-B), under construction at LLNL, requires measurement of the neutral gas density in high magnetic fields near the plasma at several axial regions. This background gas pressure (BGP) diagnostic will help us understand the role of background neutrals in particle and power balance, particularly in the maintenance of the cold halo plasma that shields the hot core plasma from the returning neutrals. The BGP consists of several cold-cathode, magnetron-type gauges stripped of their permanent magnets, and utilizes the MFTF-B ambient B-field in strengths of 5—25 kG. Similar gauges have operated in TMX-U in B-fields up to 3 kG. To determine how well the gauges will perform, we assembled a test stand which operated magnetron gauges in an external, uniform magnetic field of up to 30 kG, over a pressure range of 10^{-9}—10^{-5} Torr, at several cathode voltages. This paper describes the test stand and presents the results of the tests.

39325 Laser spectroscopy of sputtered atoms. Gruen, D.M.; Pellin, M.J.; Young, C.E.; Calaway, W.F. (Materials Science & Technology and Chemistry Divisions, Argonne National Laboratory, Argonne, Illinois 60439). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 3, 1779-1785(May 1986). Contract W-31-109-ENG-38.

The use of laser radiation to study the sputtering process is of relatively recent origin. Much has been learned from this work about the basic physics of the sputtering process itself through measurements of velocity and excited state distributions of sputtered atoms and the effects of adsorbates on substrate sputtering yields. Furthermore, the identification, characterization, and sensitive detection of sputtered atoms by laser spectroscopy has led to the development of in situ diagnostics for impurity fluxes in the plasma edge regions of tokamaks and of ultrasensitive methods (ppb Fe in Si) for surface analysis with ultralow (picocoulomb) ion fluences. The techniques involved in this work, laser fluorescence and multiphoton resonance ionization spectroscopy, will be described and illustrations given of results achieved up to now.

39326 Electric probes in plasmas. Lipschultz, B.; Hutchinson, I.; LaBombard, B.; Wan, A. (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 3, 1810-1816(May 1986). Contract AC02-78ET51013.

This paper provides a background for the use of Langmuir and gridded energy analyzer probes in diagnosing plasmas with varied characteristics. Theory is illustrated which governs the analysis of data from, and the design of these probes. Several probe analysis techniques and some of their typical problems are presented.

39327 Characterization of the Tokamak Fusion Test Reactor plasma edge by Langmuir—calorimeter probes. Kilpatrick, S.J.; Manos, D.M.; Budny, R.V.; Stangeby, P.C.; Ritter, R.S.; Young, K.M. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 3, 1817-1821(May 1986). Contract AC02-76CH03073.

Two combination Langmuir—calorimeter probes were operated on the Tokamak Fusion Test Reactor (TFTR) midplane to measure plasma properties of the scrape-off layer. Two different calorimeter elements were used: 0.5 x 3 x 8 mm Ta plates or 6.4 mm diameter graphite rods fitted with thermocouples. Separate graphite rods served as Langmuir elements. This paper presents Langmuir probe measurements of the radial profiles of edge density and electron temperature, and calorimeter measurements of heat flux. The variation of these quantities in certain operational regimes are presented, including dependence on Ohmic and neutral beam heating, compression and free expansion, plasma major and minor radii, plasma current, and line integral density with and without Cr gettering.

39328 Lyapunov stability conditions for relativistic multifluid plasma. Holm, D.D.; Kupershmidt, B.A. (Los Alamos National Lab. (LANL), NM, USA. Center for Nonlinear Studies; Los Alamos National Lab. (LANL), NM, USA. Theoretical Div.; Tennessee Univ., Tullahoma, USA. Space Inst.). *Physica D: Nonlinear Phenomena (Amsterdam);* **18**: No. 1-3, 405-409(Jan 1986). (CONF-850165—). Contract W-7405-ENG-36.

From Conference on solitons and coherent structures; Santa Barbara, CA, USA (11 Jan 1985).

The Hamiltonian structure is given for ideal relativistic multifluid plasma dynamics in the laboratory frame with the Hamiltonian functional equaling the relativistic energy minus the mass energy. The noncanonical Poisson bracket for this system turns out to be the same as for the nonrelativistic multifluid plasma, but with dynamical variables replaced by their relativistic counterparts. New constants of the motion are then derived from the Hamiltonian structure and used as Lyapunov functionals for proving sufficient conditions for nonlinear stability of relativistic multifluid plasma equilibria. The nonrelativistic multifluid plasma reemerge in that limit.

39329 (ORNL/tr—86/21) Application of the resonant fluorescence method to the diagnostics of helium-like carbon in the T-10 tokamak. Moskalenko, I.V.; Shcheglov, D.A. (Oak Ridge National Lab., TN (USA); Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1986. Contract AC05-84OR21400. Translation of IAE-4227/7, Moscow, 1985. 27p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86012186.

This paper offers an analysis of the applicability of laser resonant fluorescence (LRF) methods to a study of the behavior of highly charged ions of light elements. A description of the radiation source utilizing a doubling of the frequency of the dye laser with the aid of a potassium pentaborate crystal is given. The source is intended for optical pumping of 2 $^2S_1 \rightarrow 2\ ^2P$/sub 0,1,2/ transitions in the helium-like carbon ion. A system of diagnostics by the LRF method in the T-10 tokamak and the regimes in which the measurements were performed are described. A number of experimental results are presented.

39330 Application of the gyrokinetic equation to high frequency R.F. . Chiu, S.C. (GA Technologies, Inc., San Diego, CA, USA). *Plasma Physics and Controlled Fusion;* **27**: No. 12B, 1525-1537(Dec 1985).

A general electromagnetic conductivity tensor for inhomogeneous magnetic field is derived from the gyrokinetic equation for arbitrary frequency and distribution using Littlejohn's Lagrangian approach. A generalized gyrokinetic quasilinear operator is also obtained. For the ion-cyclotron range of frequencies, a full wave equation for the fast and Bernstein wave near the second harmonic is derived.

39331 Calculation of the self-consistent electric field in toroidal nonaxisymmetric devices. Hastings, D.E.; Kamimura, T. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Computational Physics;* **61**: No. 2, 286-296(Nov 1985). Contract AC05-84OR21400.

In a toroidal nonaxisymmetric plasma, the radial electric field is determined by the constraint that the radial ion and electron fluxes be equal. This ambipolarity relationship is in general a nonlinear algebraic equation for the electric field that can have multiple solutions. An algorithm is proposed here to solve this equation and obtain a spatially continuous, temporally stable solution. For definiteness, this is applied to a bumpy torus, and it is shown that there exists a boundary in the density, electron temperature, and ion temperature space across which the potential changes abruptly from a spatial hill to a spatial well.

39332 Spatially and temporally resolved diagnostics for microsecond, intense electron beams. Gilgenbach, R.M.; Brake, M.; Horton, L.D.; Bidwell, S.; Lucey, R.F.; Smutek, L.; Tucker, J.E. (Nuclear Engineering Dept., Univ. of Michigan, Ann Arbor, MI). pp 2R-1 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—).

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Experiments are underway to investigate new diagnostics for electron beams in vacuum and in a plasma background. Measured parameters include temporally resolved beam current profile and beam emittance. These characterizations are being performed during electron beam diode closure experiments (1) and beam-plasma interaction experiments with either of two long-pulse accelerators: MELBA (Michigan Electron Long Beam Accelerator): Voltage = -1 MV, Current = 10 kA, at Pulselength = 0.1 to 1μs (1.4μs) for voltage flat to within +.7% (+.10%). The second accelerator is a long-pulse Febetron with parameters: Voltage = -0.5 MV, Current = 1 kA, and Pulselength = 0.3 s. Two different configurations have been developed which use Cerenkov radiation to detect electron beam current profiles as a function of time. The first uses Cerenkov emission by electrons which impinge axially on a single fiberoptic lightguide enclosed in a lucite tube. Plasma light is blocked by graphite spray or thin foil covering the end of the optical fiber. This diagnostic has the following advantages: 1) The threshold energy for Cerenkov emission effectively discriminates between high energy beam electrons and low energy (3-5 eV) plasma electrons, 2) The small, nonconducting probe introduces a minimal perturbation into the beam-plasma system, 3) Excellent signal to noise ratio is obtained because the fiberoptic signal is directly transmitted to a photomultiplier tube in the Faraday cage, 4) Quantitative data is obtained directly.

39333 Progress in large-area, multiple-aperture acceleration of volume-produced H^- ions. Lietzke, A.F.; Hauck, C.A. (Lawrence Berkeley Lab., Berkeley, CA). pp 4P-6 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC03-76SF00098.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

A 15-cm^2 multiple-aperture (6-slot), single-stage accelerator is being used at Lawrence Berkeley Laboratory to investigate area scaling and H^- production physics associated with scaling-up from

the small-hole, low-density tests of Leung, toward the high-density, large-area requirements anticipated by users (10 A, 50 mA/cm²). Magnets within the grid structure also permit the study of electron supression and removal techniques. Thus far, the maximum average H^- intensity (3 mA/cm²) has been considerably lower than expected (30 mA/cm²). This has been traced partly to non-uniformity (<2X), and partly to the electron supression B-field (<3X). The remaining discrepancy has not yet been located. Likewise the accelerated electron content (50 - 600 mA, depending on conditions) is puzzlingly high. Thus far, the H^- production and the electron content have been found to depend upon the location and direction of the bucket filter's B-field, the potential of the beam-forming grid (Grid 1), the source pressure, the plasma density and the electron temperature. The maximum H^- intensity and minimum electron intensity is usually associated with the lowest electron temperature. A small positive bias on the beam forming grid has been helpful only at low plasma densities; and at each pressure, the H^- intensity saturates as the plasma density increases. Likewise, at each plasma density an optimum pressure is observed (higher pressure correlates to denser plasma).

39334 Effect of wall material on H^- production in a multicusp source. Leung, K.N.; Ehlers, K.W.; Pyle, R.V. (Lawrence Berkeley Lab., Berkeley, CA). pp 4P-5 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC03-76SF00098.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

H^- or D^- ions are required to generate efficient neutral beams with energies in excess of 150 keV. A magnetically-filtered multicusp source is capable of producing high-quality volume-generated H^- beams with sufficient current density ($\approx$ 40 mA/cm²) to be useful for both neutral beam heating of fusion plasmas and accelerator applications. Attempts have been made to further improve the arc efficiency of this source in order to provide the capability of long pulse or dc operation. The effect of wall material and wall temperature on the H^- ion density has been studied by Graham in a high pressure, diffusion-type plasma. No significant difference in negative ion densities has been observed for Pyrex, stainless steel, copper or molybdenum. In this paper, the authors investigate the extracted H^- beam with different metallic liners installed in a magnetically-filtered multicusp source (15 cm diam by 24 cm long). These metal liners were cleaned in an ultrasonic alcohol bath before installation. To insure good thermal and electrical contact with the source chamber, two stainless-steel rings were used to force the liner to lay flush against the vessel wall. A steady-state hydrogen plasma was produced by primary electrons emitted from two 0.05-cm-diam tungsten filaments.

39335 The transition to turbulence in a beam plasma. McCowan, R.; Waish, J. (Dartmouth Coll.). pp 5P-1 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—).

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Chaotic behavior now appears to be a universal phenomenon in nonlinear systems. The present work is an attempt to observe chaotic behavior of longitudinal plasma modes in a beam plasma. The experiment consists of a strongly magnetized electron beam formed plasma column with an electron density of 10^9 to 10^{10} electrons/cm³. The plasma is probed with a second beam with voltages from 0 to 1000 volts, and currents from 0 to 30 mA. The purpose of this second beam is to drive natural modes of the bounded system unstable, the nature of these unstable waves is studied. Correlations between amplitudes of different frequency modes have been observed in this system, as have amplitude time sequences indicative of period doublings and chaotic behavior explained by maps. Newly acquired digital data acquisition and control equipment have been added to the experimental system to measure the power spectra, time evolution, auto and cross correlations of plasma density, temperature and energy in various modes of the plasma.

39336 Effects of minority ions on the propagation of the Fast Alfven wave. Wong, K.L.; Kristiansen, M.; Hagler, M. (Dept. of Electrical Engineering/Computer Science, Texas Tech. Univ., Lubbock, TX). pp 5P-6 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—).

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Minority ions play an important role in ICRF wave heating and fast wave current drive. The former provides supplemental heating to the plasma ions, and the latter enables a Tokamak reactor to operate in steady state. The injection of minority ions greatly perturbs the propagation and absorption properties of the fast waves provided that the excitation frequency and confining magnetic field strength make the hybrid layers exist inside the plasma. A cold-plasma alab model with gradient confining magnetic field, parabolic plasma density, vacuum layer, launching antenna and conducting walls was used in studying wave propagation with and without minority ions. The wave propagation was studied individually for each discrete toroidal eigenmode (N=Rk/sub z/). There exists an asymmetric density cutoff region which is mainly due to the density variation in a single-ion plasma. The larger the torodial mode number, the larger the density cutoff region. Therefore, there exists a maximum mode number N/sub m/, which can be excited for each operating frequency. With injection of minority ions, the cutoff region for each mode number is almost unchanged. But, if one carefully chooses the excitation frequency; the hybrid layers can exist inside the plamsa for all or part of the allowed eigenmodes. Those eigenmodes with hybrid layers inside the plasma will undergo drastic change in the propagation and absorption of the waves.

39337 An experimental study of plasma waves generated by co-linear optical mixing. Umstadter, D.; Darrow, C.; Clayton, C.; Joshi, C. (Univ. of California, Los Angeles, CA). pp 5P-7 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AS03-83ER40120.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Longitudinal plasma waves produced by the resonant heating of two transverse electromagnetic waves are of interest for several reasons. First, it has been predicted theoretically and demonstrated in simulations that the exceedingly large electric field of such a wave may be used to accelerate particles to high energies. Secondly, because the plasma wave necessarily obeys the plasma dispersion relation, it may serve as a versatile and accurate plasma density probe. Furthermore, several schemes have been proposed to locally heat plasmas using the damping of these waves. The latter application is particularly relevant to the study of ionospheric plasma physics and cross-field transport. We present here results appropriate to all of these research avenues. These investigations also raise some interesting new questions concerning plasma wave-wave interactions. In co-linear optical mixing, two electromagnetic waves with slightly differing frequencies are injected parallel into a plasma. If the plasma density is such that the plasma frequency approximately matches the difference frequency of the EM waves, then a longitudinal electrostatic wave will be resonantly excited. The two EM waves in this experiment are the 9.6 μm line (4J) and the 10.6 μ line (12J) of a CO_2 laser. An arc discharge preionizes hydrogen gas to provide the initial plasma. The resonant plasma density corresponding to these wavelengths, 1.1 x 10^{17} cm^{-3}, is diagnosed by means of ruby Thomson scattering and tuned by varying the arc parameters. The authors observe at this resonant density ruby light, both red- and blue-shifted by ωp, at an angle of 7°.

39338 Basic plasma experiments relevant to fusion, space and plasma processing problems. Hershkowitz, N. (Univ. of Wisconsin-Madison, Madison, WI). pp 1A-1 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-78ET51015.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

This paper considers a variety of experimental situations which exhibit the interaction between basic plasma studies and applied plasma situations (fusion and space plasmas). Plasmas near fusion device boundaries often have many of the characteristics of both systems, possessing properties of collisionless plasmas and sheaths but incorporating important effects from particle recycling at boundaries. Probes, long regarded as too perturbing for fusion devices are now beginning to play a useful role. Studies of probes in RF situations are likely to result in improved fusion diagnostics. The authors first worked on the development of emissive probes in order to improve the understanding of self-consistent electric fields in small laboratory multidipole plasmas, and then to study double layers. Now emissive probes are beginning to find their way into measurements of edge and bulk plasmas in fusion experiments. Electrostatic shocks, sheaths, double layers and multiple double layers are beginning to turn up in many problems. Some problems have their origin as basic plasma experiments while others are born as fusion issues and then studied in the context of basic plasma questions before reappearing as fusion experiments. For example, axial ponderomotive force wandered from cusp plugging experiments to basic plasma experiments and then returned to provide MHD stability for fusion experiments in the form of radial ponderoomotive force.

39339 Quasilinear theory in general magnetic geometry. Chiu, S.C. (GA Technologies Inc., San Diego, CA). pp 4R-1 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC03-84ER53158.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Quasilinear theory is widely considered to be a convenient starting point of RF modeling when non-Maxwellian nature of the distribution function is important. In general magnetic geometry, this equation can be derived from gyrokinetic equations. Alternatively, we can use the equations of guiding center Hamiltonian to calculate the correlations and apply the Chandrasekhar-Fokker-Planck theory to derive the quasilinear equations. In this paper, the authors derive the equation from both approaches. They find that the two approaches are equivalent. However, the latter approach can be more convenient in avoiding some singularities. The resolution of these singularities shall be discussed within the framework of the latter approach.

39340 Coupling of fast waves in the LHRF to non-uniform plasma. Pinsker, R.I.; Duvall, R.; Colestock, P.; Hwang, D.Q.; Fortgang, C.; Douglas, M. (Princeton Univ.). pp 4R-3 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-76CH03073.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Current drive in the LHRF (ω/sub CI/ $<<$ $\omega \approx$ ω/sub PI/ $<<$ ω/sub CE/) by waveguide-array launched slow waves has been successfully demonstrated in several large tokamak experiments. Current drive using the fast wave branch of the cold plasma dispersion relation has recently been proposed, and an experimental program to evaluate the feasibility of fast wave current drive (FWCD) is underway at PPPL. The primary advantage of FWCD is that the fast wave has the potential of penetration beyond the lower hybrid resonance layer. An important topic of investigation in the FWCD experiments is the wave coupling physics at the waveguide-plasma interface. The minimum density required for fast wave propagation is much higher than the cut-off density for the slow wave. A finite-sized antenna could launch a significant fraction of power into the inaccessible part of the $n_{\parallel}$ spectrum; previous analytic work has neglected this spectral region, and has been limited to particular model density profiles. For $n_{\parallel}$ values below the accessibility criterion, the density window between fast wave cut-off and the mode coupling layer where the fast and flow branches coalesce is quite narrow. In this work, the authors consider a slab model of the plasma in the coupling region, with a straight magnetic field and density varying only in the crossfield direction.

39341 Ecrh heating experiments at $\omega = 2\omega$/sub CE/ in the end plugs of the phaedrus tandem mirror. Sing, D.; Hershkowitz, N.; Scharer, J. (Univ. of Wisconsin, Madison, WI). pp 2P-4 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-78ET51015.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Electron heating experiments at $\omega = 2\omega$/sub CE/ have been performed in the end plugs of the Phaedrus Tandem Mirror. Typical target plasma parameters in the plug are $n = 3 \times 10^{12}$/ cm^{-3}, T/sub E/ = 15 to 20 eV, and E/sub I/ = 600 to 800 eV. Pulses of 15.5 GHz microwaves at power levels of up to 30 kW and up to 1 ms in duration were injected into a single end plug when the machine is run as a quadrupole stabilized tandem mirror. Increases in plasma energy of up to 300 eV per electron-ion pair have been measured using diamagnetic loops. Thomson scattering has measured an increase in the bulk electron temperature of 30% during the microwave pulse. Measurements with a 3 channel target SXR detector have detected the presence of a hot electron tail with energies in excess of 10 keV. Microwave emission from hot electrons is detected by an 8 Ghz radiometer up to 50 ms after the cessation of the microwave power pulse and the plasma discharge.

39342 Analysis of halo-recycler operation on TMX-U. McGrath, R.T. (Fusion Tech. Div.-6248, Sandia National Lab., Albuquerque, NM). pp 2P-7 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC04-76DP00789.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

An analysis of particle and power flow in the halorecycler recently installed on the central cell region of TMX-U has been carried out. The primary function of the recycler is to achieve a high halo plasma density which shields the central cell core plasma from neutrals returning from the walls. This reduces energy loss by charge exchange in the central plasma and allows the core to be maintained at a higher temperature. Operating without halo recyclers TMX-U has achieved halo plasma densities near 2×10^{12} /cm^3 with electron temperatures near 20 eV. This is accomplished by directly heating the central cell and halo plasma with neutral beams. With recyclers it is hoped that a higher density halo plasma can be established. In this work power losses from the halo region are calculated for the three sets of halo plasma conditions. The plasma descriptions near the neutralizing end plates of the recycler have been calcualted using KTIC, a one dimensional kinetic plasma-neutral interaction model. This model provides the plasma description used in DEGAS, the three dimensional, Monte Carlo code for neutral hydrogen interaction with a background plasma and with material surfaces. In each of the cases investigated the recycler is found to be effective in reionizing the hydrogen flux incident on the neutralizer and neutral pressures at the recycler throat entrance, 50 cm from the neutralizer, are calculated to be near the background pressure of 10^{-6} torr.

39343 A direct indication of plasma potential diagnostic with fast time response and high accuracy based on a differential emissive probe. Yao, W.E.; Hershkowitz; Intrator, T. (Nuclear Engineering Dept., Univ. of Wisconsin, Madison, WI). pp 3R-7 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-78ET51015.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

The floating potential of the emissive probe has been used to directly measure the plasma potential. The authors have recently presented another method for directly indicating the plasma potential with a differential emissive probe. In this paper they describe the effects of probe size, plasma density and plasma potential fluctuation on plasma potential measurements and give methods for reducing errors. A control system with fast time response (α 20 μs) and high accuracy (the order of the probe temperature T/sub w// e) for maintaining a differential emissive probe at plasma potential

has been developed. It can be operated in pulsed discharge plasma to measure plasma potential dynamic characteristics. A solid state optical coupler is employed to improve circuit performance. This system was tested experimentally by measuring the plasma potential in an argon plasma device an on the Phaedrus tandem mirror.

39344 **A survey of TFTR diagnostics.** Staloff, C. (Princeton Univ., Plasma Physics Lab., Princeton, NJ). pp 1199-1209 of Fusion technology 1984. Volume 2. Elmsford, NY; Pergamon Press (1985). (CONF-840915—). Contract AC02-76CH03073.

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

TFTR is currently using 56 individual diagnostic systems to measure significant plasma and machine performance parameters and to supply collected information to the TFTR data processing and control systems. Most of this diagnostic equipment was designed, developed, and constructed at PPPL specifically for TFTR. This paper gives a general overview of TFTR diagnostics and describes a representative subset of the unique PPPL equipment.

39345 **Application of time-domain spectroscopy to antenna impedance measurements in an isotropic plasma.** Larocque, J.P.; Renaud, P.R. (Dept. of Electrical Engineering, École Polytechnique of Montreal, P.O.B. 6079, Station "A", Montreal). pp 4P-3 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC03-76SF00098.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Time-domain reflectometry (TDR) [1], digital signal processing and fast Fourier transform (FFT) are combined in order to evaluate, over a wide range of frequencies, the impedance of a linear antenna immersed in an isotropic plasma. A step-like waveform (from a TDR cable tester) is fed to the antenna. The return signal, which contains the information on the antenna's complex reflection coefficient and is displayed on a wide-band oscilloscope, is sampled and digitized. A reference pulse, coming from a precision short-circuit replacing the antenna, is processed similarly,. Subsequently the FFT is applied to both signals and the antenna impedance (or admittance) is computed as a function of frequency. The experiments are conducted with a short, thin-wire monopole immersed in a diffusion-type argon plasma (neutral gas pressure: 5 x 10^{-3} torr). A DC-bias can be applied to the antenna and thus the thickness of the ion sheath surrounding it can be changed.

39346 **Performance analysis of the vertical viewing ECE diagnostic for non-thermal electron distribution measurement.** Kato, K.; Hutchinson, I.H. (Plasma Fusion Center, MIT). pp 2C-1 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-78ET51013.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

The vertical viewing electron cyclotron emission (VECE) system on Alcator C tokamak is designed to analyze the non-thermal electron velocity distribution during lower hybrid current drive. The system employs vertical chord viewing through the center of the plasma to eliminate magnetic field variation along the line of sight, and a viewing dump made of Pyrex or Macor to decrease the effects of wall reflection and polarization scrambling. A rapid-scanning Michelson interferometer is used to obtain the frequency spectra. In principle, this design makes the frequency spectrum predominantly a function of the electron energy due to the relativistic mass shift. Effectiveness of the dump and the collection optics is evaluated by comparing the second harmonic thermal emission with and without the viewing dump. Results are summarized below. These results clearly show the polarized nature of the thermal emission in the second harmonic, and demonstrate the possibility of decreasing both the wall reflection and polariation scrambling by use of a compact (7cm x 7cm) viewing dump. The effectiveness of the viewing dump in reducing the background level is found to be approximately 90% for both modes in the second harmonic frequency range. Preliminary inspection of the non-thermal spectra in the second harmonic show the effect of background absorption to vanish with the installation of the dump.

39347 **A review of diagnostics for measuring local potentials and magnetic fields in high temperature plasma.** Osher, J.E. (Lawrence Livermore National Lab., Livermore, CA). pp 2C-3 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract W-7405-ENG-48.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

The systematic control of local potentials and magnetic fields is fundamental to magnetic fusion confinement experiments. The crucial importance of accurate supporting measurements and the limitations of present diagnostics for making the needed measurements of local plasma potential and magnetic field has led an increased emphasis on R & D for new and better diagnostics for this application. This paper reviews the diagnostic instruments and ideas presented at the "Joint U.S. - Japanese workshop on Local Plasma Potential and Magnetic Field Measurements," held at the Lawrence Livermore National Laboratory in Sept. 1984. While emphasis in this workshop was on the local potental measurements that are so crucial to the understanding and control of the potential profile of high-temperature confinement systems such as tandem mirrors with thermal electron barriers, extensive discussion of techniques for local measurement of magnetic fields, particularly with probe beams of various kinds, was included.

39348 **Recent experiments on a magnetically insulated ion diode with an active anode plasma source.** Greenly, J.B.; Ueda, M.; Rondeau, G.D. (Cornell Univ.). pp 2R-4 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-77ET53005.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

The puff valve used in the previous experiments gave uniformity worse than a factor of two in the azimuth and had a tendency to degrade with time. Therefore a new puff valve has been developed and incorporated into the diode. Puffed gas measurements show that better than 15% uniformity is now obtained and there is no sign of puff degradation with time. The term plans include: optimization of the plasma source with the new puff valve, pursuing uniform plasma output while maintaining or improving upon all the qualities obtained previously. In addition, we will diagnose beam optics and magnetic bending in the diode insulating field to attempt a determination of the anode plasma position in the gap as well as its shape. The extracted beam species is characterized.

39349 **Operation of the multicusp plasma generator as a high-charge-state ion source.** Leung, K.N.; Pyle, R.V. (Lawrence Berkeley Lab., Berkeley, CA). pp 4P-4 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC03-76SF00098.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

It has been demonstrated that permanent magnets can be used to improve the density and uniformity of DC discharge plasmas. In recent years, there has been a growing interest in applying these multicusp plasma generators as ion sources for neutral beam injection systems. In order to form energetic neutral beams from H^- or D^- ions, a compact and efficient neutralizer is desired. A high charge state plasma target may become a good candidate for this application. Attempt has been made to operate a "closed" multicusp plasma generator as a source of high charge state ions. The prototype source is fabricated from an oxygen-free copper cylinder (15 cm diam by 20 cm long) which is surrounded externally by 8 columns of samarium-cobalt magnets to form a longitudinal line-cusp configuration. In normal operation, the argon pressure inside the source is maintained at $\simeq 5 \times 10^{-5}$ Torr. Preliminary results show that the source is capable of producing positive argon ions with charge state as high as +7 (average charge state is between 2

and 3) for a discharge power of 250 V and 25 A. Different schemes to enhance the high charge state ions is presented.

39350 **MHD stability properties of shaped toroidal configurations.** Johnson, J.L. (Princeton Univ., Plasma Physics Lab., Princeton, NJ). pp 3S-1 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-76CH03073.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

The favorable confinement results observed on tokamaks has led to the belief that it will lead to the first demonstration of scientific feasibility of magnetic fusion. Considerable data has been assembled which indicates that tokamak operation is limited to the β-values (β is the ratio of material pressure confined to magnetic pressure) below a limit set by ideal MHD instabilities such as ballooning and external kink modes. The stability limits for these modes depend strongly on the shape of the plasma column. Recently, β-values of five per cent have been achieved on PBX, the Princeton Beta Experiment. Many of the high-β shots end in plasma disruptions. Some understanding is now being generated on the relation between high-n ballooning modes and low-n kink and tearing instabilities. This should provide insight into the way plasma shaping can lead to even higher-β operation. In order to obtain the favorable stability properties of bean-shaped tokamaks with respect to ballooning modes, it is necessary to maintain a broad current profile. This, in turn, makes stabilization of low-n free-boundary modes difficult. An obvious solution to this problem would be to introduce the rotational transform by means of external fields as in a stellarator, which would eliminate the need for a net toroidal current in the plasma. Favorable experimental progress, together with optimistic theoretical predictions, has recently rekindled interest in the stellarator approach. Heliotron-E has been operated with β-values of two per cent, significantly higher than that predicted by simple theory. Current thinking in this program, together with its present status, is discussed.

39351 **Octopole and hexapole end cells for tandem mirrors.** Devoto, R.S. (Lawrence Livermore National Lab., Univ. of California, Livermore, CA). pp 2P-2 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract W-7405-ENG-48.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

To date, nearly all operating or planned tandem mirror experiments use quadrupole magnetic fields in the end cells for stabilization of magnetohydrodynamic (MHD) instabilities. A disadvantage with quadrupole fields is the considerable aximuthal asymmetry in the magnetic field. As a result, those center-cell ions which pass into the end cell can suffer a radial deflection and be lost by radial diffusion. The diffusion can be minimized by adding C-coils to the end cell to symmetrize the geodesic curvature in the end cell. Very small radial deflection can be obtained on each field line. Such a method is used in the design of the MFTF-B experiment and the MARS reactor. A disadvantage of this approach is the large number of coils required. In addition, since ions drift azimuthally as they reflect in the end cell, even perfect cancellation on individual field lines will, in general, not lead to zero radial diffusion. One way to form a more symmetric field in the end cells is to use multipoles higher than quadrupole. The use of an octopole end cell for a small tandem-mirror reactor was recently proposed/sup L/ and has been adopted for the miniMARS reactor study. In this paper the author discusses some feature of octopole, and to a lesser extent, hexapole end cells in both reactor and experimental (MFTF-B) applications.

39352 **Estimation of linear and quadratic transfer fuctions for fully developed turbulence.** Ritz, CH.P.; Powers, E.J. (Univ. of Texas at Austin, Austin, TX 78712). pp 3C-5 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC05-78ET53043.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

A statistical method for modeling the linear and quadratically nonlinear relationship between fluctuations monitored at two spatial points in a turbulent medium is presented. This relationship is described with the aid of linear and quadratic transfer functions. For this work the authors study a system which can be described by a single input and output and which shall be modeled in the frequency domain by linear and quadratic elements. A unique feature of the approach described in this paper is that it is valid for non-Gaussian "input " and "output" signals. The relaxation of the assumption of a Gaussian input permits studies of self-excited turbulent systems such as in fluids and plasma. The concept of coherency is extended to quantify the goodness of the quadratic model.

39353 **Ballooning spectrum of rotating plasmas.** Hameiri, E.; Laurence, P. (New York Univ., NY). *Studies in Applied Mathematics;* **25**: No. 2, 396-405(Feb 1984). Contract AC02-76ER03077.

Ballooning modes are shown to be part of the spectrum by using a singular sequence of localized modes. It is shown that the modes arise from Alfven and slow magnetosonic waves propagating along rays confined inside the plasma. Different ballooning modes are seen, depending on the particular rotating frame of observation, indicating that there are accumulation points of eigenvalues. The effect of rigidly rotating flow is seen to be destabilizing due to an analog of the Rayleigh-Taylor instability associated with density gradients in the presence of a centrifugal force. Flow shear also modifies the stability criterion. A certain component of the flow shear will eliminate the ballooning modes. 17 references.

39354 **X-ray diagnostics of tokamak plasmas.** Kaellne, E.; Kaellne, J. (Harvard-Smithsonian Astrophysical Observatory, Cambridge, MA). *AIP (American Institute of Physics) Conference Proceedings;* No. 94, 463-479(1982). (CONF-820855—).

From International conference on X-ray and atomic inner-shell physics; Eugene, OR, USA (23 Aug 1982).

In this review, the authors venture into a new arena for work in atomic X-ray spectroscopy which can be dubbed tokamak X-ray spectroscopy diagnostics (TOXRASD). Not only is the experimental development exciting, but the measurements explore areas of atomic and plasma physics which have been inaccessible until just recently. Even though much of the present experimental effort is oriented towards obtaining a TOXRASD for fusion conditions, the new results touch upon some very basic atomic physics questions as well. Much effort has gone into the study of few electron systems, i.e., H-, He-, and Li-like ions with the purpose of utilizing the characteristic X-ray emission for diagnosing laboratory and astronomical plasmas or with the aim of developing the diagnostics, i.e., extending our understanding of the relationship between X-ray line emission and the plasma conditions under which the ions are formed and their ground states excited. However, the emission from highly charged heavy ions, such as neon-like molybdenum, has also attracted interest. Here the focus of the discussion is around results of the latest vintage from the TOXRASD project at the Alcator C tokamak at MIT. 38 references, 14 figures.

39355 **(CONF-860166—4) Muon-induced fusion: experiments at LAMPF.** Jones, S.E. (Brigham Young Univ., Provo, UT (USA). Dept. of Physics and Astronomy). 1986. Contract FG02-85ER13449. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86011483.

From Workshop on fundamental muon physics: atoms, nuclei, and particles; Los Alamos, NM, USA (20 Jan 1986).

LAMPF Experiment No. 727, a study of muon-catalyzed fusion in mixtures of deuterium and tritium, was started in 1982 and completed with several important extensions in 1985. A unique feature of the experiment was that near-liquid-hydrogen densities were maintained over a broad range of temperatures. Many basic param-

eters of muon catalysis were measured for the first time. A summary is given of salient results with an emphasis on the many surprises that the experiment yielded.

39356 (CONF-860421—56) Isotopic alloying to tailor helium production rates in mixed-spectrum reactors. Mansur, L.K.; Rowcliffe, A.F.; Grossbeck, M.L.; Stoller, R.E. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012232.

From 2. international conference on fusion reactor materials (ICFRM-2); Chicago, IL, USA (13 Apr 1986).

The insoluble inert gas helium has been found to produce significant changes in the irradiation response of structural materials when introduced at levels in the appm range and above. In the structural materials for future fusion reactors, (n,α) transmutation reactions induced at a high rate by the 14 MeV component of the neutron spectrum will lead to helium production rates of the order of 10 appm/dpa. However, until a fusion reactor is available, materials scientists must study radiation effects, including the interactions with helium, by means of accelerator and fission reactor irradiations.

39357 (CONF-860652—6) Folded waveguide coupler for ion cyclotron heating. Owens, T.L.; Chen, G.L. (McDonnell Douglas Astronautics Co., St. Louis, MO (USA); Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012230.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

A new type of waveguide coupler for plasma heating in the ion cyclotron range of frequencies is described. The coupler consists of a series of interleaved metallic vanes within a rectangular enclosure analogous to a wide rectangular waveguide that has been "folded" several times. At the mouth of the coupler, a plate is attached which contains coupling apertures in each fold or every other fold of the waveguide, depending upon the wavenumber spectrum desired. This plate serves primarily as a wave field polarizer that converts coupler fields to the polarization of the fast magnetosonic wave within the plasma. Theoretical estimates indicate that the folded waveguide is capable of high-efficiency, multimegawatt operation into a plasma. Bench tests have verified the predicted field structure within the waveguide in preparation for high-power tests on the Radio Frequency Test Facility at the Oak Ridge National Laboratory.

39358 (CONF-860652—7) Liquid nitrogen cooling considerations of the compact ignition tokamak. Dabiri, A.E. (Oak Ridge National Lab., TN (USA)). 15 Jun 1986. Contract AC05-84OR21400. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012620.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

An analytical procedure was developed to estimate the cooldown time between pulses of the Compact Ignition Tokamak (CIT) utilizing liquid nitrogen. Fairly good agreement was obtained between the analysis results and those measured in the early fusion experimental devices. The cooldown time between pulses in the CIT is controlled by the energy disposition in the inner leg of the TF coil. A cooldown time of less than one hour is feasible for the CIT if fins are used in the cooling channels. An R and D experimental program is proposed to determine the actual cooldown time between pulses since this would be considered an issue in the conceptual design of the CIT.

39359 (CONF-8604212—1) CIT cost review for external remote maintenance equipment (WBS K). Spampinato, P.T. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86011756.

From Minimars review meeting; Toronto, Canada (20 May 1986).

Viewgraphs are presented on the various Minimars assemblies. (MOW)

39361 (DOE/ER/53198—95) University of Wisconsin reversed field pinch boundary study. Quarterly progress report, March 13-June 13, 1986. Dexter, R.N.; Prager, S.C.; Sprott, J.C. (Wisconsin Univ., Madison (USA)). 1986. Contract FG02-85ER53198. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86012666.

This report summarizes our progress during the fifth quarter of support of our RFP boundary study. We obtained bids on the first and major portion of the finish-machining of the vacuum containment vessel, and signed contracts with Sulzer the representatives of de Pretto-Escher Wyss (the VCV fabricator) to proceed. The Physics group agreed on the engineering features of the final machining which await only final drawings. Our Engineering Manage visited de Pretto-Escher Wyss in Italy and inspected the fabrication to this point, having also examined the work schedule, which remains compatible with the original goals. We continued to obtain improvement in the RFP plasmas created in the Octupole tank which reached reliable operation at the 300 kA level. Data sets on fluctuation measurements were obtained for wide ranges of q, from tokamak to RFP regimes. Our new data acquisition hardware and software were installed and tested. Major orders for vacuum equipment were completed. Major agreements on remodeling plans, and crane modifications were accomplished. The 1:8-scale wooden model was brought up to date. Programmatic tests of toroidal rail-limiters were initiated. Arc segments were fabricated for final welding of the optimized hoops, which we now plan to install early in August 1986.

39362 (LA-UR—86-2045) Directions for reactor target design based on the US heavy ion fusion systems assessment. Wilson, D.C.; Dudziak, D.; Magelssen, G.; Zuckerman, D.; Dreimeyer, D. (Los Alamos National Lab., NM (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA)). 1986. Contract W-7405-ENG-36. 12p. (CONF-8606131—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012415.

From 2. international topical symposium on ICF research by high-power beams; Nagaoka, Japan (16 Jun 1986).

We studied areas of major uncertainty in target design using the cost of electricity as our figure of merit. Net electric power from the plant was fixed at 1000 MW to eliminate large effects due to economies of scale. The system is relatively insensitive to target gain. Factors of three changes in gain cause only 8 to 12% changes in electricity cost. An increase in the peak power needed to drive targets poses only a small cost risk, but requires many more beamlets be transported to the target. A shortening of the required ion range causes both cost and beamlet difficulties. A factor of 4 decrease in the required range at a fixed driver energy increases electricity cost by 44% and raises the number of beamlets to 240. Finally, the heavy ion fusion system can accommodate large increases in target costs. To address the major uncertainties, target design should concentrate on the understanding requirements for ion range and peak driver power.

39363 (SAND—85-2628C) Trapping of deuterium in oxygen-implanted aluminum. Myers, S.M.; Follstaedt, D.M. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 15p. (CONF-860522—15). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012165.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

Temperature-ramp experiments employing nuclear-reaction analysis have shown that deuterium (D) is strongly trapped by Al_2O_3 precipitates in O-implanted Al. Binding enthalpies of approximately 0.7 and 1.2 eV relative to the solution site were ob-

tained for the oxide-associated traps, as compared to 0.5 eV for defect traps within the metal matrix. The 0.7-eV trapping is hypothesized to result from the formation of D_2 molecules at the oxide boundaries and possibly within the oxides, whereas the 1.2-eV interaction is tentatively attributed to O-D bonding. Strong trapping of hydrogen isotopes by oxides within Al and possibly other metals has significant implications for plasma-materials interactions in fusion reactors.

39364 **(SAND—86-0962C) Nuclear microprobe analysis. Applications.** Doyle, B.L. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 20p. (CONF-860829—20). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009637.

From Annual joint meeting of the Electron Microscopy of America and the Microbeam Analysis Society; Albuquerque, NM, USA (10 Aug 1986).

Nuclear microprobe analysis is a relatively small, but growing, field which utilizes high energy (MeV) beams of finely focused (1 μm) ions to examine the atomic composition of the near-surface region of solids. With this analytic technique, every element in the periodic table is detectable, for most cases at trace amounts, and for many cases concentrations can be nondestructively determined in three dimensions. The emphasis of this paper will be to give examples of how a nuclear microprobe can be applied to a materials problem. A recent study of TiC-coated graphite tiles used in the main moveable limiter in the Tokamak Fusion Test Reactor (TFTR) at Princeton Plasma Physics Laboratory was selected as the central topic of this paper, because most of the ion beam analysis techniques which are available on our probe were used in this investigation.

39365 **(UCRL—93763) Parametric economic studies for inertial confinement fusion electric power plants.** Meier, W.R.; Hogan, W.J. (Lawrence Livermore National Lab., CA (USA)). 11 Jun 1986. Contract W-7405-ENG-48. 12p. (CONF-860601—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012188.

From 4. international conference on emerging nuclear energy systems; Madrid, Spain (30 Jun 1986).

We have conducted parametric economic studies for inertial confinement fusion (ICF) electric power plants using an economic model to estimate the cost of electricity. We found that the economy of scale of the reactor is an important factor in determining the combination of target gain, driver efficiency, and electric conversion efficiency required for an economically competitive system. A strong economy of scale allows a significant reduction in these performance parameters for a given cost of electricity. The degree of reduction is dependent, however, on the maximum achievable chamber pulse rate.

39366 **(UCRL—93848) Standard method for economic analyses of inertial confinement fusion power plants.** Meier, W.R. (Lawrence Livermore National Lab., CA (USA)). 30 May 1986. Contract W-7405-ENG-48. 18p. (CONF-860610—28). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012356.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

A standard method for calculating the total capital cost and the cost of electricity for a typical inertial confinement fusion electric power plant has been developed. A standard code of accounts at the two-digit level is given for the factors making up the total capital cost of the power plant. Equations are given for calculating the indirect capital costs, the project contingency, and the time-related costs. Expressions for calculating the fixed charge rate, which is necessary to determine the cost of electricity, are also described. Default parameters are given to define a reference case for comparative economic analyses.

39367 **(UCRL—94097) Wolter x-ray microscope calibration.** Gerassimenko, M. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 6p. (CONF-860880—8). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012340.

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

A 22 x Wolter microscope was calibrated after several months of operation in the Lawrence Livermore National laboratory (LLNL) Inertial Confinement Fusion program. Placing a point x-ray source at the microscope focus, I recorded the image plane spectrum, as well as the direct spectrum, and from the ratio of these two spectra derived an accurate estimate of the microscope solid angle in the 1 to 4 keV range. The solid angle was also calculated using the microscope geometry and composition. Comparison of this calculated value with the solid angle that was actually measured suggests contamination of the microscope surface.

39368 **(UCRL—94335) Economic studies for heavy-ion-fusion electric power plants.** Meier, W.R.; Hogan, W.J.; Bangerter, R.O. (Lawrence Livermore National Lab., CA (USA)). 20 May 1986. Contract W-7405-ENG-48. 10p. (CONF-860510—7). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012192.

From Symposium on heavy ion fusion; Washington, DC, USA (27 May 1986).

We have conducted parametric economic studies for heavy-ion-fusion electric power plants. We examined the effects on the cost of electricity of several design parameters: cost and cost scaling for the reactor, driver, and target factory; maximum achievable chamber pulse rate; target gain; electric conversion efficiency; and net electric power. Using the most recent estimates for the heavy-ion-driver cost along with the Cascade reactor cost and efficiency, we found that a 1.5 to 3 GWe heavy-ion-fusion power plant, with a pulse rate of 5 to 10 Hz, can be competitive with nuclear and coal power plants.

39369 **(UCRL—94608) Fusion breeder blanket nucleonics.** Lee, J.D. (Lawrence Livermore National Lab., CA (USA)). 20 Jun 1986. Contract W-7405-ENG-48. 4p. (CONF-860601—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012352.

From 4. international conference on emerging nuclear energy systems; Madrid, Spain (30 Jun 1986).

Refined nuclear analysis, including the treatment of resonance and spatial self-shielding, coupled with an optimization procedure, has resulted in improved performance estimates for two conceptual fission-suppressed blankets. Net specific breeding in these two blankets maximized at 0.024 and 0.023 U-233 atoms/MeV, which is about an order of magnitude higher than in fission breeders.

39370 **(UCRL—94609) MINIMARS: a 600-MWe advanced mirror-fusion reactor design.** Lee, J.D.; Logan, B.G. (Lawrence Livermore National Lab., CA (USA)). 20 Jun 1986. Contract W-7405-ENG-48. 4p. (CONF-860601—4). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012353.

From 4. international conference on emerging nuclear energy systems; Madrid, Spain (30 Jun 1986).

MINIMARS is a conceptual fusion reactor based on tandem-mirror magnetic confinement. It is designed to produce 600 MW net electric for 41 mils/kWh and to be capable of passive shutdown and afterheat removal.

39371 **Applied-B-italic ion diode experiments on the Particle Beam Fusion Accelerator-I.** (Sandia National Laboratories, P.O. Box 5800, Albuquerque, New Mexico). *Journal of Applied Physics;* 60: No. 3, 878-897(1 Aug 1986). Contract AC04-76DP00789.

A series of experiments was performed with an Applied-B-italic ion diode on the Particle Beam Fusion Accelerator-I, with peak voltage, current, and power of approximately 1.8 MV, 6 MA, and 6 TW, respectively. The purpose of these experiments was to explore issues of scaling of Applied-B-italic diode operation from the sub-TW level on single module accelerators to the multi-TW level on a low impedance, self-magnetically insulated, multimodule accelerator. This is an essential step in the development of the 100-TW level light ion beam driver required for inertial confinement fusion. The accelerator and the diode are viewed as a whole because the power pulse delivered by the 36 imperfectly synchronized magnetically insulated transmission lines to the single diode affects module addition, diode operation, and ion beam focusability. We

studied electrical coupling between the accelerator and the diode, power flow symmetry, the ionic composition of the beam, and the focusability of the proton component of the beam. Scaling of the diode impedance behavior and beam quality with electrical drive power is obtained from comparison with lower-power experiments.

39372 Illumination uniformity of laser-fusion pellets using induced spatial incoherence. Schmitt, A.J.; Gardner, J.H. (Naval Research Laboratory, Washington, DC 20375). *Journal of Applied Physics;* **60**: No. 1, 6-13(1 Jul 1986).

We have examined the possibility of using a realistic laser system to produce uniform illumination of a direct drive laser-fusion pellet. This laser system consists of a short wavelength laser (KrF, $\lambda = 0.25$ μm) with the induced-spatial-incoherence method. A numerical analysis describes the laser beams propagating through the pellet plasma, energy deposition by inverse bremmstrahlung absorption, and energy conversion to ablation drive pressure. The results indicate that highly uniform ($\Delta P/<P><2\%$) distributions can be produced while a large fraction of the laser beam energy (>75%) is simultaneously absorbed. The spatial structure of the distribution is also analyzed and found to contain primarily low spatial frequencies with maximum magnitudes less than 0.5%. Misalignment of the laser beams increases the overall nonuniformity by about 1.5% for every 1% increase in the relative misaiming error (measured as a percentage of the pellet radius). A maximum misalignment error on the order of a few microradians in the final optics is suggested by this analysis.

39373 Magnetic field alignment studies for the URAGAN-3 torsatron. Colchin, R.J.; Harris, J.H.; Lee, D.K.; Rome, J.A.; Fedotov, S.I.; Ozherel'ev, F.I.; Pavlichenko, O.S.; Pogozhev, D.P.; Zalkind, V.M.; Treffert, J.D. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Review of Scientific Instruments;* **57**: No. 7, 1233-1241(Jul 1986). Contract AC05-84OR21400;AC02-84ER53166.

If the major axes of the helical and vertical field coils of a torsatron plasma confinement device are not aligned to within ~ 1% of their major radii, the resulting error field can break up closed magnetic flux surfaces and reduce the effective plasma confinement volume. A novel technique for accurately locating the magnetic symmetry axes of torsatron helical and vertical coil sets to within ~ 1 mm using magnetic field measurements near the device major axis (i.e., away from the confinement volume) is described and applied to the URAGAN-3 torsatron. The axis of the vertical field coil set was found to be shifted by ~ 1 cm relative to the axis of the helical coil set; this shift could account for the reduced confinement volume observed in previous experiments. The magnetic measurements were repeated after coil repositioning to verify correct alignment.

39374 Radio frequency induction plasma generator 80-kV test stand operation. Goede, H.; DiVergilio, W.F.; Fosnight, V.V.; Vella, M.C.; Ehlers, K.W.; Kippenhan, D.; Pincosy, P.A.; Pyle, R.V. (TRW Space and Technology Division, Redondo Beach, California 90278). *Review of Scientific Instruments;* **57**: No. 7, 1261-1265(Jul 1986). Contract AC03-76SF00098;AC03-81ER52071.

Beam extraction tests at energies up to 80 kV were performed using a radio frequency induction (RFI) plasma generator hydrogen ion source. A 7 x 10-cm², long pulse accelerator was operated with a 10 x 10-cm² axial magnetic cusp bucket and a magnetic-filter bucket. Atomic fractions (up to 85% H^+), plasma production efficiencies (roughly-equal0.6 A of beam per kW rf power), and beam divergence were at least as good as with arc plasmas in similar chambers. Potential advantages of the RFI plasma sources for large-scale applications are ease of operation, reliability, and extended service life.

39375 Particle and impurity control in toroidal fusion devices. (Fusion Research Center, The University of Texas at Austin, Austin, Texas 78712). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 4, 1918-1932(Jul 1986).

A review of working particle and impurity control techniques used in and proposed for magnetic fusion devices is presented. The requirements of both present-day machines and envisaged fusion reactors are considered. The various techniques which have been proposed are characterized by whether they affect sources, sinks, or fluxes; in many cases a particular method or device can appear in more than one category. Examples are drawn from published results. The solutions proposed for the large devices which will be operating during the next 5 years are discussed.

39376 Cleanup and gettering during the Beryllium Limiter Experiment in Impurity Study Experiment-B. (Metals and Ceramics Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **4**: No. 4, 1933-1938(Jul 1986). Contract AC05-84OR21400.

Changes in plasma impurities and radiated power due to cleanup and gettering during the Beryllium Limiter Experiment are related to changes of the surface composition of the torus walls and residual gases in the torus. Pulse discharge cleaning was very effective in cleaning the ISX-B vacuum vessel after installation of the beryllium limiter. As a result of discharge cleaning, areas near the limiter were soon covered with a beryllium rich deposit containing some iron, nickel, chromium, and titanium as well as oxygen, carbon, sulfur, and nitrogen. Oxygen levels on the wall were reduced to below 10 at. %. Materials transport during discharge cleaning was apparently due to sputtered neutrals. Evaporation of beryllium from the limiter and subsequent deposition on the torus walls caused by high power tokamak shots produced gettering of the machine equal or better than that previously obtained with titanium or chromium. This gettering by beryllium eliminated the need for further discharge cleaning or other gettering. Beryllium transport in this case appears to be mostly as ions in the plasma edge.

39377 Design of an air-core reversed field pinch. Schmid, P.; Robertson, S. (Dept. of Physics, Univ. of Colorado, Boulder, CO 80309). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-14**: No. 3, 267-270(Jun 1986).

The design of a small air-core reversed field pinch (RFP) is described. A numerical model was used to simulate the waveform of the plasma current and to improve the design of the air-core transformer.

39378 Analysis of dielectric-filled waveguide coupling to plasmas in the ICRF. Lam, N.T.; Lee, J.L.; Scharer, J.; Vernon, R.J. (Dept. of Electrical and Computer Engineering, Univ. of Wisconsin, Madison, WI 53706). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-14**: No. 3, 271-276(Jun 1986).

Dielectric-filled waveguides may be advantageous for heating reactor-grade tokamak plasmas, due to their compactness and power-handling capability. The authors present a theoretical analysis of coax excitation and plasma impedance for a dielectric-filled rectangular waveguide. The plasma reflection coefficient is obtained by matching plasma and waveguide fields at the interface. The numerical results show that the reflection coefficients can be made small by careful tailoring of the waveguide dimensions to the density profile for heating at the second or third harmonic of deuterium. They present a scattering matrix approach for the design of a coaxial feed to match the waveguide in the presence of a wide range of plasma loading. For a waveguide filled with a high permittivity dielectric, a shorted probe gives better coupling than an open-ended probe.

39379 High—aspect-ratio laser-fusion targets driven by 24-beam uv laser radiation. Richardson, M.C.; McKenty, P.W.; Keck, R.F.; Marshall, F.J.; Roback, D.M.; Verdon, C.P.; McCrory, R.L.; Soures, J.M.; Lane, S.M. (Laboratory for Laser Energetics, University of Rochester, 250 East River Road, Rochester, New York 14623-1299). *Physical Review Letters;* **56**: No. 19, 2048-2051(12 May 1986). Contract FC08-85DP40200.

The implosions of thin-walled, large-diameter, deuterium-tritium—filled glass microballoon targets ablatively driven by the 351-nm, 2-kJ OMEGA laser are reported. Compressed fuel diagnostics, including the first direct simultaneous measurements of the fuel and

shell areal densities, and detailed hydrodynamic simulations determine the effect of illumination uniformity on implosion symmetry.

39380 The elusive isobaric reactor. Mills, R.G. (Princeton Univ., Dept. of Chemical Engineering, School of Engineering and Applied Science, Princeton, NJ 08544). *Fusion Technology;* 9: No. 3, 408-421(May 1986).

A reactor is proposed in which the principal role of the magnetic field is to reduce the thermal conductivity. A purely toroidal magnetic field confines a plasma whose pressure is almost constant. The plasma is limited in height by two planar electrodes. The density rises as the temperature falls toward the material boundaries to maintain essentially isobaric conditions. Fueling the reactor is a simple by-product of the drift motion of the ions through the reactor, the confinement time being determined by the residence time of transport rather than by diffusion. As in many reactor schemes, the size is large, but not unreasonable. There are unsolved problems requiring research, but these seem addressable with modest temperature plasmas.

39381 Conceptual design of a deuterium-^{3}He fueled tandem mirror reactor satellite/breeder system. Shuy, G.W.; Dabiri, A.E.; Gurol, H. (Science Applications International Corp., La Jolla, CA 92038). *Fusion Technology;* 9: No. 3, 459-475(May 1986).

The purpose of this paper is to describe and assess a system of "nearly" neutron-free fusion reactors and their fuel breeding source. This breeder is a fusion reactor that produces ^{3}He for the "satellite" reactors. In this study the breeder is a self-sustaining fuel production plant, that is, it neither contributes to the power grid system nor consumes any power from the grid system. The assessment is made with respect to physics, engineering, cost, and safety.

39382 A parametric study of water-cooled solid breeder blanket designs. Misra, B.; Morgan, G.D. (Argonne National Lab., 9700 South Cass Avenue, Argonne, IL 60439). *Fusion Technology;* 9: No. 3, 452-458(May 1986).

An assessment of the role of the design and operating parameters on the performance of solid breeder blankets based on lithium ceramics (Li_2O and γ-$LiAlO_2$) was carried out. The results indicate that not only poor thermophysical properties but also uncertainties associated with the property data base are the design-limiting factors. In addition, the operating conditions such as the upper and the lower temperature limits, the choice of breeder materials either in the form of sintered pellets or in sphere-pac form, the interfacial contact resistance between the coolant channels and the solid breeder, and the diffusion characteristics of tritium and chemical interactions between tritium and the solid breeder play a prominent role in selection of blanket concepts. Designs to account for the expected degradation of the thermophysical properties due to thermal sintering and nuclear irradiation lead to high coolant and structural material fractions, and thus may result in a lower tritium breeding ratio. The results of the parametric studies show that water-cooled solid breeder blanket designs require a firmer data base for the operating temperature limits, the thermophysical properties, the gap conductances, and the tritium retention and release characteristics of solid breeders.

39383 Pulse discharge cleaning for open-ended systems. Garner, H.R.; Aoki, T. (GA Technologies, Inc., P.O. Box 85608, San Diego, CA 92138). *Fusion Technology;* 9: No. 3, 481-483(May 1986).

A significant improvement in plasma parameters (ion temperature and electron temperature) has been achieved through the use of pulse discharge cleaning in the mirror machine, RFC-XX-M, in Nagoya, Japan. The essence of this technique is to use pulsed-off-resonance ion cyclotron heating (10-ms duration every 10 s), gas puffing, and electron cyclotron heating preionization in conjunction with baking (to 100 to 150°C) in order to prepare the machine surfaces for full-power normal experimental shots. It was also found that RFC-XX-M could operate at nearly full parameters without titanium gettering after discharge cleaning, whereas without discharge cleaning and titanium gettering it is difficult to sustain a plasma.

39384 The performance of the poloidal divertor experiment neutral beam wall armor. Kugel, H.W.; Eubank, H.P.; Kozub, T.A.; Williams, M.D.; Ulrickson, M. (Plasma Physics Lab., Princeton Univ., Princeton, NJ 08544). *Fusion Technology;* 9: No. 3, 401-407(May 1986).

During 2 yr of experimental operations, the Poloidal Divertor Experiment (PDX) inner wall neutral beam graphite armor provided protection for perpendicular heating injections into normal and disruptive plasmas as well as injection in the absence of plasma for special experiments, calibrations, and tests involving the optimization and development of the PDX neutral beam injection system. About 80 to 100 heating injections occurred per operating day, at a 360-s duty cycle, into plasmas of various densities, and typically $\approx$5 to 50% of the injected neutral beam power was transmitted to the armor. More than 10^3 neutral beam pulses of 100- to 300-ms duration were injected in the absence of plasma at peak power densities of 1.5 to 3 kW/cm^2, yielding peak surface temperatures of 950 to 1550°C. There was no significant impurity production attributable to beam heating of the armor, and no observed beam-induced, macroscopic surface damage. Many of the design constraints and performance issues encountered in this work are relevant to the design of larger fusion devices.

39385 Inertial confinement fusion development options: Facility characteristics and schedules from a reactor physics viewpoint. Blink, J. (Lawrence Livermore National Lab., Univ. of California, Livermore, CA 94550). *Fusion Technology;* 9: No. 3, 381-390(May 1986). Contract W-7405-ENG-48.

The pulsed, localized fusion source in inertial confinement fusion (ICF) permits scale-down of reactor dimensions and fusion yield in development facilities while still maintaining full-scale reactor surface and volume energy loads. Hence, the power and geometric scale of ICF development facilities can be much smaller than comparable magnetic fusion facilities. The power is reduced by reducing both the pulse rate and the target gain; however, full gain and pulse rate experiments of limited duration will be possible. At least three engineering facilities will be required for the development of heavy-ion beam or short wavelength laser driven fusion power. The design and construction times required for large facilities produce a nominal plan with a demonstration (DEMO) plant operating around the year 2018, and a crash plan with DEMO operation in 2009. Fusion breeder development is expected to follow a similar time line, except that a crash (option-limited) plan could succeed as early as the turn of the century.

39386 Tokamak Fusion Test Reactor gas injection control system design and operation. Thompson, M.E.; Dylla, H.F.; LaMarche, P.H.; Arnold, N.D.; Rauch, W.A.; Mueller, D.; Hawryluk, R.J. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey, 08544). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 317-321(May 1986). Contract AC02-76CH03073.

Magnetic fusion devices require fast-responding, versatile, and accurate gas injection systems in order to initiate and modulate the plasma density. We describe the gas injection control system (GICS), which regulates the gas injected into the torus of Princeton's Tokamak Fusion Test Reactor (TFTR). Synchronized with each TFTR discharge, a PDP 11/23 microcomputer provides real-time control for one to six fast injection valves, each allocated to feedback or open loop operation. Up to four feedback sources, including torus pressure gauges and plasma density measurements, are checked once each cycle for 1000 cycles; the cycle duration can be set to any multiple of 2 ms up to 16 ms. Detection of various fault conditions can cause automatic shutdown or modification of GICS operation. Data is archived after each TFTR discharge, and subsequently used for particle fueling studies and analysis of system drifts. A steady state mode of operation is used for vacuum vessel discharge cleaning. The system also provides for valve calibration and torus pumping speed measurements.

39387 Neutral beam injection induced gas influx and desorption in the Doublet III vessel. Kim, J.; Colleraine, A.P.; Stewart, L.D. (GA Technologies, Inc., San Diego, California 92138). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1084-1086(May 1986). Contract AC03-84ER51044.

A method is presented of determining the gas flow from a beamline to a tokamak vessel and the gas desorption due to neutral beams impinging upon the torus wall. Time-dependent gas pressure measured both in the beamline and in the torus are matched by the corresponding theoretical solutions to arrive at unique values of the conductance between the two volumes, the desorption rate, and the pumping speed. This technique has been successfully demonstrated on the Doublet III tokamak and its beamlines.

39388 Hydrogen pellet acceleration with a two-stage system consisting of a gas gun and a fuseless electromagnetic railgun. Honig, J.; Kim, K.; Wedge, S.W. (Department of Electrical and Computer Engineering, University of Illinois, Urbana, Illinois 61801). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1106-1112(May 1986).

Hydrogen pellets are successfully accelerated for the first time using a two-stage system consisting of a pneumatic gun and an electromagnetic railgun. The pneumatic gun preaccelerator forms cylindrical hydrogen ice pellets (1.6-mm diam x 2.15-mm long) and accelerates them with high-pressure helium gas to velocities in excess of 500 m/s. The booster accelerator, which is a fuseless, circular-bore electromagnetic railgun, derives its propulsive force from a plasma arc armature. The plasma arc armature is formed by electrically breaking down the propellant gas which follows the pellet from the gas gun into the railgun. The diagnostics are for the monitoring of the main capacitor bank and rail currents, for the pellet detection and velocity measurements at the breech and muzzle ends of the railgun, for the recording of the plasma-arc-armature movement inside the railgun bore, and for the photographing of the hydrogen pellet exiting the railgun. Using the system, which is a 60-cm long proof-of-principle machine for refueling magnetic fusion devices, hyrogen pellet velocities exceeding 1 km/s have been achieved for pellets exiting the gas gun at velocities of ~500 m/s.

39389 Operation of a repeating pneumatic hydrogen pellet injector on the Tokamak Fusion Test Reactor. Combs, S.K.; Milora, S.L.; Foust, C.R.; Schmidt, G.L.; McBride, T.P. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1113-1117(May 1986). Contract AC05-84OR21400.

The repeating pneumatic hydrogen pellet injector, which was developed at the Oak Ridge National Laboratory (ORNL), has been installed and operated on the Tokamak Fusion Test Reactor (TFTR). The injector combines high-speed extruder and pneumatic acceleration technologies to propel frozen hydrogen isotope pellets repetitively at high speeds. The pellets are transported to the plasma in an injection line that also serves to minimize the gas loading on the torus; the injection line incorporates a fast shutter valve and two stages of guide tubes with intermediate vacuum pumping stations. A remote, stand-alone control and data acquisition system is used for injector and vacuum system operation. In early pellet fueling experiments on TFTR, the injector has been used to deliver deuterium pellets at speeds ranging from 1.0 to 1.5 km/s into plasma discharges. First, single large (nominal 4 mm diam) pellets provided high densities in TFTR (1.8×10^{14} cm^{-3} on axis); after conversion to smaller (nominal 2.7 mm diam) pellets, up to five pellets were injected at 0.25 s intervals into a plasma discharge, giving a line-averaged density of 1×10^{14} cm^{-3}. Operating characteristics and performance of the injector in initial tests on TFTR are presented.

39390 Nuclear spin polarization of solid deuterium—tritium. Souers, P.C.; Fearon, E.M.; Mapoles, E.R.; Gaines, J.R.; Sater, J.D.; Fedders, P.A. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1118-1123(May 1986). Contract W-7405-ENG-48.

It appears that parallel alignment of deuteron and triton magnetic moments increases the cross section of the nuclear reaction T(d,n) He^4 by 50%, thereby promising a laser driver of perhaps half the original energy. Both "brute-force" and dynamic nuclear polarization are considered and the many potential problems of the latter are considered. High nuclear polarization by the dynamic technique requires a small nucleus-to-unpaired electron ratio, a long longitudinal nuclear relaxation time and a short longitudinal electron relaxation time. Normal D—T is shown to be inadequate, and enriched and possibly very pure molecular DT will be required. The key variable is the nuclear relaxation time, which can either depend on the interaction with rotationally excited impurity molecules or on paramagnetic defects formed by the tritium radiation. Radiation-induced DT decomposition and rotational catalysis will combat one another to affect the DT purity. The expected atom density and fractionation effects are considered. There exists one frequency at which both D and T atoms can be pumped.

39391 Tritium gettering from air with hydrogen uranyl phosphate. Souers, P.C.; Uribe, F.S.; Stevens, C.G.; Tsugawa, R.T. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1150-1154(May 1986). Contract W-7405-ENG-48.

Hydrogen uranyl phosphate (HUP), a solid proton electrolyte, getters tritium gas and water vapor from air by dc electrical action. We have reduced the formation of residual tritiated water to less than 2% and demonstrated that HUP can clean a 5.5 m^3 working glove box. Data are presented to illustrate the parameters of the gettering and a model is derived. Two other tritium gettering electrolytes have been discovered.

39392 Flashover lithium ion source development for large pulsed power accelerators. Bieg, K.W.; Burns, E.J.T.; Gerber, R.A.; Olsen, J.N.; Lamppa, K.P. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 772-776(May 1986). Contract AC04-76DP00789.

The Particle Beam Fusion Accelerator II (PBFA II), a light-ion pulsed power accelerator intended for inertial confinement fusion (ICF) applications, is currently under construction at Sandia National Laboratories. The accelerator will deliver a 30 MV, 5 MA lithium beam from an Applied-B diode to drive an ICF target. The ion source for this diode will require a thin (~1 mm), dense (10^{16} cm^{-3}) anode plasma layer of singly ionized lithium over an anode area of 10^3 cm^2. One type of source being investigated is the flashover ion source, which generates the anode plasma via vacuum flashover of a lithium-bearing dielectric material. Experiments with a LiF flashover source on the 0.03 TW Nereus accelerator have shown that contaminant ions account for as much as 70% of the extracted ion beam current. To overcome this, we have explored in-diode cleaning of the externally prepared anode surface by glow discharge cleaning and vacuum baking as well as in-diode preparation of the anode surface by vacuum evaporation of the lithium dielectric. Lithium-bearing dielectric materials which have been investigated include LiF, LiI, $LiNO_3$, and Li_3N. These techniques have resulted in a two to threefold improvement in the extracted lithium ion purity. As a result, a glow-discharge cleaned LiF flashover source will be used for initial pulsed-power testing on PBFA II.

39393 Microcellular foams via phase separation. Young, A.T. (Materials Science and Technology Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1128-1133(May 1986). Contract W-7405-ENG-36.

A study of wide variety of processes for making plastic foams shows that phase separation processes for polymers from solutions offer the most viable methods for obtaining rigid plastic foams which meet the physical requirements for fusion target designs. Four general phase separation methods have been shown to give polymer foams with densities less than 0.1 g/cm^3 and cell sizes of 30 μm or less. These methods involve the utilization of nonsol-

vent, chemical or thermal cooling processes to achieve a controlled phase separation. Two distinct phases are obtained where either the polymer phase is a continuous phase or two bicontinuous phases are obtained where both the polymer and solvent are interpenetrating, continuous, labyrinthine phases. Subsequent removal of the solvent gives the final foam structure.

39394 **Hollow droplet generator for polymer shell production.** Crawley, R. (KMS Fusion, Inc., Ann Arbor, Michigan 48106). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1138-1141(May 1986). Contract AC08-82DP40152.

Small, spherical, polymer shells are used as fuel containers in inertial fusion experiments. These shells have traditionally been made by spray drying or more recently using droplet generators. It has proven difficult to control product size and wall thickness for thermosetting materials. In this work we describe a dual orifice droplet generator for making hollow shell preforms. The inner orifice injects bubbles of a desired gas into the polymer solution droplet stream. The stream is agitated using a piezoelectric diaphragm and produces uniformly sized hollow droplets. Shells formed from these hollow preforms have tight distributions of diameter and wall thickness.

39395 **Ablation layer coating of mechanically nonsupported inertial fusion targets.** Gram, R.Q.; Kim, H.; Mason, J.F.; Wittman, M. (Laboratory for Laser Energetics, University of Rochester, Rochester, New York 14623-1299). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1145-1149(May 1986). Contract FC08-85DP40200.

Ablation layers are deposited on DT-filled glass microballoon targets by a parylene coating scheme while the targets are bounced on the surface of a mechanical resonator. Optimum bouncing is achieved with the resonator surface moving with a peak vertical velocity of ~3 cm/s at a frequency much greater than the bounce frequency of the targets. The resonator, a solid cylinder of high-Q material, uses a longitudinal mode of vibration to achieve vertical motion, which is uniform over its surface. A flexural mode of the cylinder is used for dislodging targets which have become stuck. In their natural state, the targets become charged triboelectrically and by the beta emission from the tritium decay. The adhesion of these charged targets is eliminated by creating a low power plasma in the bouncing region. Real time monitoring and control of coating thickness are achieved by use of a laser reflectometer. Coatings are examined with electron microscopy and x-ray radiography.

39396 **Influence of impurity and particle control on Tandem Mirror Experiment Upgrade plasma operation.** Allen, S.L.; Yu, T.L.; Foote, J.H.; Pickles, W.L. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1075-1078(May 1986). Contract W-7405-ENG-48.

A variety of techniques are used in Tandem Mirror Experiment-Upgrade (TMX-U)= to control impurities and reflux: repeated plasma pulses, glow discharge cleaning (GDC), and gettering. We performed a series of experiments under three different plasma-wall conditions: no wall conditioning after a machine maintenance cycle, glow-discharge-cleaned wall, and a gettered wall. We used several plasma diagnostics to determine the effect of these procedures on TMX-U plasma parameters. Spectroscopic measurements show that GDC reduces impurities and increases the electron temperature, enabling full-duration beam-sustained plasma operation without a large number of repeated plasma pulses. Gettering further reduces the impurities and the neutral pressure; this improved condition persists for several shots after gettering is stopped. Measurements from residual gas analyzers and an end-loss ion spectrometer show that hydrogen is present in the plasma during the initial deuterium operation after pumpdown; the hydrogen level decreases after plasma operation with gettering, indicating reduced wall recycling.

39397 **Surface analysis of 1984/1985 Tokamak Fusion Test Reactor limiter tiles.** Pontau, A.E.; Wampler, W.R.; Mills, B.E.; Doyle, B.L.; Wright, A.F.; Ulrickson, M.A.; LaMarche, P.H.; Dylla, H.F.; Fukuda, S. (Sandia National Laboratories, Livermore, California and Albuquerque, New Mexico 87185). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1193-1197(May 1986). Contract AC04-76DP00789;AC02-76CH03073.

Bare POCO AXF-5Q graphite tiles were installed as the plasma-facing surface of the Tokamak Fusion Test Reactor (TFTR) movable limiter for a series of ~ 2700 high power discharges (600 with up to 6 MW neutral beams). During this operating phase, erosion and deposition processes modified the surface of the limiter. In the regions of the most intense plasma contact, which reached temperatures over 2400°C, only small amounts of metallic impurities ($<5 \times 10^{16}$ atoms/cm^2) are observed during subsequent beta backscattering and proton-induced x-ray emission (PIXE) analysis. Also observed in these regions are several small areas of surface crazing, and scattered droplets of metals (~ 1 mm diam) presumed to originate from melted internal hardware. In regions more removed from direct plasma contact, thicker metallic deposits are observed (~ 2×10^{18} atoms/cm^2). There are more of these deposits on the side facing the electron drift direction than on the ion drift side. The metallic deposits are composed of ~ 55% Ni, 25% Cr, and 20% Fe and several trace elements. Near-surface retained deuterium levels vary from 10^{16} to 10^{18}/cm^2 along one ion-side/electron-side pair of tiles. Deuterium from TFTR operations in the bulk of a tile may have been as much as 5 ppm. Hydrogen in the tile was ~1 at. %. Surface roughness measured outside the intense plasma contact region is much more than the original POCO AXF-5Q graphite, whereas within the plasma contact region, tile surfaces are somewhat smoother than they were initially. Two of the tiles in high heat flux regions broke during operation. The resulting geometry change led to areas of enhanced erosion and nearby redeposition of carbon.

39398 **Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor.** LaMarche, P.H.; Dylla, H.F.; McCarthy, P.J.; Ulrickson, M. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1198-1202(May 1986). Contract AC02-76CH03073.

Isotopic exchange experiments performed in the Tokamak Fusion Test Reactor (TFTR) are used to examine the outgassing and diffusive properties of graphite used as the plasma limiter. Changeover from hydrogen to deuterium for different periods ranges from ~600 to 60 plasma discharges, which appears to be correlated in the limiter temperature. We present a simple analytical model that predicts a fast transient (~10 plasma discharges) changeover, where the deuterium fueling dilutes the adsorbed and near surface hydrogen, and a slowly changing term where bulk hydrogen diffuses to the surface. Using this model we can extract an activation energy for diffusion of 0.15 +- 0.02 eV. We hypothesize that interpore diffusion for this porous (~15%) material is consistent with our observations.

39399 **Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment.** Langley, R.A.; Zuhr, R.A.; Lewis, M.B. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1203-1206(May 1986).

A beryllium limiter was installed in the Impurity Study Experiment-B (ISX-B) tokamak to test the applicability of beryllium as a plasma-side component for possible use in the Joint European Torus (JET). This test was a collaborative effort involving both ORNL and JET personnel. The ISX-B tokamak was operated for more than 3000 high power neutral beam injected discharges using the beryllium limiter as the main confining aperture. In order to access the migration of beryllium in the tokamak and attached diagnostics, both stainless steel and silicon samples were placed at various strategic positions and used as catcher plates. Nuclear reaction analysis was used to measure the beryllium deposited on the plates and provided a measure of the beryllium migration. Both particu-

lates and a thin film were found. The toroidal distribution of these two migration components is presented as well as a discussion of the analysis technique for the deposited beryllium. Analysis was made of the distribution of beryllium particulate matter deposited on the inside of the vessel wall. Both a size distribution and spatial distribution are presented.

39400 **Weight change measurements of erosion/deposition at beryllium limiter tiles in the Impurity Study Experiment-B.** Roberto, J.B.; Edmonds, P.H.; England, A.C.; Gabbard, A.; Zuhr, R.A. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1210-1212(May 1986). Contract AC05-84OR21400.

The weight changes of Be tiles which functioned as a rail limiter in ISX-B for more than 3500 beam-heated discharges have been determined. The net weight loss for the limiter was 2.0 g, with the central tiles losing a total of 3.2 g, and the inboard tiles gaining 1.2 g. The weight loss is attributed primarily to the release of Be droplets as a result of limiter surface melting. The weight gains resulted from an inward flow of molten material along the limiter surface. The results indicate high erosion (melt loss) with incomplete and nonuniform redeposition (melt flow) of limiter material during periods of limiter melting.

39401 **Calibration and characterization of Bayard—Alpert gauges operating in high magnetic fields.** Pickles, W.L.; Hunt, A.L. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1732-1735(May 1986). Contract W-7405-ENG-48.

Standard Bayard—Alpert gauges have been successfully operated for several months in 0.3—0.7 T magnetic fields at eleven locations near the plasma edge of the Tandem Mirror Experiment-Upgrade (TMX-U). After individual calibration in the local TMX-U magnetic field, the gauges clearly measure gas density. One of these eleven gauges has been studied extensively and has maintained calibration within 12% during this period of operation. All gauge filaments are tungsten and are heated with direct current. The gauge housing allows operation in the low density plasma outside the limiter radius by thermalizing the neutral gas that enters the gauge and by preventing plasma from entering the gauge. Changing the orientation of the gauge with respect to the magnetic field changes the gauge calibration, or effective sensitivity, by as much as a factor of 100. Only some orientations of the filament collector plane with respect to the magnetic field direction allow calibrated operation as a pressure gauge. This range of angles is approximately from 20° to 50°. Each of the eleven gauges was oriented to produce a usable sensitivity, then calibrated for the magnetic field effects at that position. After initial operation in the magnetic field, a small recalibration of less than 10% for permanent filament distortion was necessary for the unshielded gauge. For D_2, CH_4, X/ sub e/ and Kr gas, the measured recalibration factor to the gauge sensitivity in the same high magnetic field varied only 16% rms about the average of 9.7 for the unshielded gauge. Repeated measurement of the magnetic recalibration for each of the species over a 1 month period showed less than 12% variation.

39402 **Design, construction, and testing of the vacuum vessel for the tandem Mirror Fusion Test Facility.** Gerich, J.W. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1742-1748(May 1986). Contract W-7405-ENG-48.

In 1980, the U.S. Department of Energy gave the Lawrence Livermore National Laboratory approval to design and build a tandem Mirror Fusion Test Facility (MFTF-B) to support the goals of the National Mirror Program. We designed the MFTF-B vacuum vessel both to maintain the required ultrahigh vacuum environment and to structurally support the 42 superconducting magnets plus auxiliary internal and external equipment. During our design work, we made extensive use of both simple and complex computer models to arrive at a cost-effective final configuration. As part of this work, we conducted a unique dynamic analysis to study the interaction of the 32 000 tonne concrete-shielding vault with the 2850 tonne vacuum vessel system. To maintain a vacuum of 2×10^{-8} Torr during the physics experiments inside the vessel, we designed a vacuum pumping system of enormous capacity. The vacuum vessel (4200 m^3) has been fabricated, erected, and acceptance tests have been completed at the Livermore site. The rest of the machine has been assembled, and individual systems have been successfully checked. On October 1, 1985, we began a series of integrated engineering tests to verify the operation of all components as a complete system.

39403 **Chromium getter studies in the Tokamak Fusion Test Reactor.** Dylla, H.F.; LaMarche, P.H.; Blanchard, W.R.; Budny, R.V.; Boody, F.P.; Bush, C.E.; Groebner, R.J.; McCarthy, P.J.; Simpkins, J.E.; Stratton, B.C. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1753-1757(May 1986). Contract AC02-76CH03073.

We have studied the effects of the deposition of thin films (~0.1 μm) of chromium onto ~70% of the torus area of the Tokamak Fusion Test Reactor (TFTR). The purpose of these experiments was to test the difference between high surface coverage and high pumping speed gettering schemes with respect to minimizing oxygen impurity generation in high power tokamak discharges. The initial Cr deposition had significant effects on vessel outgassing and subsequent plasma performance: the outgassing of H_2O, CO, and CO_2 decreased by a factor of 10, oxygen impurity radiation decreased by a factor of 2, the plasma Z/sub eff/ decreased from 1.3 to 1.1, and the plasma density limit increased by 20%. This improvement correlates with a significant reduction of the edge radiation as the density limit is approached. The effects of the initial and subsequent Cr depositions were relatively long lasting, exhibiting time constants of the order of weeks. We attribute the observed impurity reduction to a modification of the oxide surface on the vessel wall which is apparently a significant impurity source for oxygen.

39404 **Surface thermography.** Ulrickson, M. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 4: No. 3, 1805-1809(May 1986). Contract AC02-76CH03073.

The temperature sensitivity of many plasma materials interactions in both fusion plasmas and process plasmas requires the determination of the surface temperature of the material in contact with the plasma. The determination of the surface temperature is made difficult by the presence of the plasma, the large electrical potentials that may be present, and the need to not contaminate the surface. Radiation thermography permits determination of the surface temperature while overcoming the difficulties listed above. This paper briefly discusses thermal radiation, Planck's Law, and the selection of the best wavelength band for a given temperature range. Both one and two color pyrometry are discussed. Several considerations that are necessary for practical applications are discussed. Some examples of the use of radiation thermometry in fusion applications between 350 and 3000 °C are presented. Surface heat flux has also been determined from the time variation of the surface temperature.

39405 **Thermal conductivities for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ solid breeders with and without irradiation effects.** Liu, Y.; Tam, S.W. (Argonne National Lab., IL). *Fusion Technology;* 7: 399-410(May 1985).

Thermal conductivities (k,k/sub eff/) have been estimated for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ with and without neutron irradiation effects. The estimation is based on (a) data from unirradiated UO_2, Li_2O, and γ-$LiAlO_2$; (b) data from irradiated dielectric insulator materials; and (c) relatively simple physical models. Comparison of model predictions with limited ex- and in-reactor data found reasonable agreement, thus lending credence for their use in design applications. The impact of thermal conductivities on tritium breeding and power generation in fusion solid breeder blankets is briefly highlighted. 30 references, 10 figures, 1 table.

39406 Prevention of impurity accumulation in classical tokamaks. Ohkawa, Tihiro. (GA Technologies, Inc., San Diego, CA, USA). *Kakuyugo Kenkyu;* **53**: No. 2, 161-168(Feb 1985).

A new method of impurity control in toroidal devices is proposed. Density inhomogeneity on flux surfaces produced by beam injection or RF heating creates a poloidal electric field. The resultant impurity ion distribution and orbit leads to the reversal of the impurity inflow.

39407 Magnetic flux surface mapping in the Proto-Cleo Stellarator. D'Haeseleer, W.D.; Anderson, D.T.; Anderson, F.S.B.; Doerner, R.P.; Mertens, K.J.; Shohet, J.L.; Treffert, J.D. (Torsatron/Stellarator Lab., Univ. of Wisconsin-Madison, Madison, WI). pp 2P-8 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-84ER53166.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

The magnetic flux surface topology of the University of Wisconsin Proto-Cleo Stellarator has been reexamined experimentally in order to verify the presumed magnetic structure in the device. The experiment utilized an electron beam injected parallel to the 1.2 kG magnetic field. The beam was detected by a probe which could be scanned through the containment volume. The experimentally measured passes of the electron beam are subsequently compared with numerical data obtained from the drift surfaces traced out by a simulated beam. This is basically the same technique as used for a similar experiment performed on the Interchangeable Module Stellarator (IMS), a few months earlier. The authors have mapped four flux surfaces and obtain relatively good agreement between the experiment and the theoretical prediction. It is important to note that the magnetic structure depends sensitively on the current ratio in the toroidal and helical coils. Actual measurement of this current ratio showed that the existing ratio equals 1.48 instead of the previous ratio of 1.33. This latter ratio leads to a theoretical rotational transform at the edge of 0.6, while the authors found a lower iota value of about 0.5, being consistent with the larger current ratio.

39408 Proton ring trapping in a magnetic mirror. Pedrow, P.D.; Greenly, J.B.; Hammer, D.A.; Sudan, R.N. (Cornell Univ.). pp 2Q-4 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC02-77ET53005.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Proton rings trapped by a gated mirror have been studied in solenoidal fields of 6kG (300keV protons) and 8kG (430keV protons) with puffed and static hydrogen gas fills. The rings are formed by injecting a proton beam from an annular magnetically insulated diode (mean radius 10 cm) through a magnetic cusp to convert parallel velocity to rotational velocity. Primary diagnostics are Faraday cups, B-dot loops, shadow boxes, and damage targets. The trapped rings at 8 kG make eight passes through the length of the 1.5 meter mirror and have a lifetime of 4 μs. The measured bounce frequency (≈1MHz) is consistent with that predicted by a Hamiltonian description of single particle motion. The injected ring contains 2×10^{13} protons and after 8 bounces, the number has dropped to 2×10^{13} protons. Particle losses are believed to be caused by charge-exchange and mirror losses. Calculations show that many of the protons can be neutralized by a charge-exchange event and be lost as a neutral before the captured electron is stripped away. Mirror losses are caused by imperfect diode-cusp performance or by a change in proton pitch angles due to collisions, instabilities, and/or incomplete space-charge neutralization. Calculations show that the 4μs trapping lifetime is to due to the classical stopping power of the background hydrogen.

39409 Observation of diminished railgun performance -- possible causes and solutions. Hawke, R.S.; Nellis, W.J. (Lawrence Livermore National Lab., Livermore, CA). pp 5B-3 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract W-7405-ENG-48.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

The authors have fabricated and tested three precision round bore railguns. One was 1.6 m long and two were 5.2 m long. All were mated to a 1 m long, 35 mPa helium gas gun which injected 1 g projectiles at 1.2 km/s. The 1.6 m railgun used copper for rails and unidirectional fiberglass loaded Extrin (FLE) for rail spacers and supports. This railgun operated as expected and successfully launched 1 g and 4 g projectiles at 4.2 and 3.0 km/s, respectively. The first 5.2 m long railgun was also made from copper rails and FLE spacers. Erosion of this spacer was substantial and the maximum velocity achieved was 5 km/s. A second 5 m gun was made with copper rails and polycarbonate spacers--the latter chosen for its greater erosion resistance. Maximum velocity was increased to 6.6 km/s, however, more than 12 km/s was expected. Generally, the performance of the 5 m railguns was expected for ≈2 m of acceleration to ≈4 km/s and is consistent with the performance of the 1.6 m prototype. Achievement of less than expected performance in the 5 m railguns could be the result of (1) excessive mass accretion in the arc, (2) parasitic conduction in the insulator, (3) secondary arc restrike, (4) arc/launcher viscous drag, (5) large dm/dt term in the force balance, and/or (6) reduced L' due to an expanded arc.

39410 A target plane imager for inertial confinement fusion. Swift, C.D.; Bliss, E.S.; Jones, W.A.; Seppala, L.G. (Inertial Confinement Fusion Program, Lawrence Livermore National Lab., Livermore, CA 94550). pp 261-263 of Southwest conference on optics. SPIE volume 540. Bellingham, WA; SPIE - The International Society for Optical Engineering (1985). (CONF-8503156—). Contract W-7405-ENG-48.

From Society of Photo-Optical Instrumentation Engineers conference; Albuquerque, NM, USA (6 Mar 1985).

The Nova laser, completed in December 1984 at Lawrence Livermore National Laboratory, is being used to conduct inertial confinement fusion experiments. It is capable of focusing more that 100 kJ of energy on small fusion targets. This paper discusses an optical system called the target plane imager (TPI) that is used during the beam alignment phase of these experiments. The TPI includes a three meter long periscope with a wide field of view, f/3 objective. The telescope relays images of the target focal plane to viewing optics and a video sensor located outside the target chamber. Operation of the system is possible at three wavelengths" 1.05μ, 0.527μ, 0.351μ. These are the three wavelengths at which the ten NOVA laser beams can irradiate targets. Both nearfield and farfield images of the ten beams can be viewed with the TPI. This instrument is used to properly align the laser to the target before each target irradiation.

39411 Reduced variation in the neutron output of the dense plasma focus. Hill, R.A. (Sandia National Labs., Albuquerque, NM). pp 5A-1 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract AC04-76DP00789.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

As previously discussed, a series of modified cathodes is being tested in our ultra-high vacuum dense plasma focus (DPF) device. Constructed entirely from high-vacuum components using metal-to-metal and ceramic (Al_2O_3)-to-metal seals, the entire DPF assembly is given a vacuum bake at 250°C resulting in a pre-fill vacuum of 5×10^{-9} torr. Powered by a 7-μf capacitor bank operated at 20 kV, a sustained neutron output of ≈$(1.02\ 0.38) \times 10^{9}$ was obtained for over 300 shots on one gas filling. In an effort to reduce the amount of contaminant gases, and in particular, the amount of oxygen in the DPF tube, a molybdenum cup was installed coaxial with and surrounding the cathode to act as a barrier

to prevent contact of hot plasma and the high-energy ion beam with the stainless steel vacuum walls. Also, all components of the fill system, pump-out system, and vacuum system (304 stainless steel) were passivated with a wet hydrogen firing at 700°C in order to inactivate the interior surfaces.

39412 **The TFTR Lithium Blanket Module Program - A status report.** File, J.; Jassby, D.L.; Bertone, P.C.; Engholm, B.A.; Hayer, E.R.; Lindgren, J.; Yang, L.; Tsang, F.Y.; Harker, Y.D.; Anderl, R.A. (GA Technologies Inc., San Diego, CA). pp 1399 of Fusion technology 1984. Volume 2. Elmsford, NY; Pergamon Press (1985). (CONF-840915—). Contract AC02-76CH03073.

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

The Lithium Blanket Module (LBM) is an approximately cubic blanket module that will be installed on the Tokamak Fusion Test Reactor (TFTR) in late 1986. Measurements of neutron transport and tritium breeding will be made with the TFTR D-D and D-T fusion neutron source. This report describes the final design and fabrication of the LBM, and the status of preparation for the experimental program.

39413 **Simulations of Tokamak sputtering conditions with high energy particle beams.** Youchison, D.L.; Nahemow, M.D.; McGrath, R.T. (Pennsylvania State Univ., University Park, PA). pp 4R-6 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—).

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

Physical sputtering of first wall and impurity control surfaces results in a substantial impurity source to a tokamak plasma. Unfortunately, only a limited sputtering yield data base exists for currently proposed impurity control surface materials. The variation of sputtering yields caused by hydrogen isotope and helium contamination due to ion implantation and adsorption is virtually unknown. This lack of fundamental data has hindered present efforts to model particle transport in the plasma edge region. This situation exists because plasma edge conditions and plasma-surface interactions are intimately coupled. Sputtering yield data for contaminated and redeposited surfaces can provide valuable information for improved edge modeling and impurity control design. In order to expand the sputtering yield data base for fusion impurity control materials a refined ion-surface interaction system has been developed at the Westinghouse Research and Development Center. This facility has the capabilities necessary to condition impurity control test samples to simulate some prior exposure to tokamak plasmas. This is achieved through ion implantation and subsequent sputtering using a 30keV ion beam complete with deceleration optics. A quartz crystal oscillator microbalance functions as the transducer. The in situ conditioning capabilities of the system will be discussed alone with data obtained for a preliminary series of sputtering experiments.

39414 **Omega: A 24-beam UV irradiation facility.** Richardson, M.C.; Beich, W.; Delettrez, J.; Dunn, M.; Folnsbee, L.; Hutchison, R.J.; Jacobs, S.A.; Keck, R.L.; Kessler, T.; Lampeter, W. (Univ. of Rochester, Lab. for Laser Energetics, Rochester). pp 234 of Digest of technical papers from the OSA/IEEE 1985 conference on lasers and electro-optics. Washington, DC; Optical Society of America (1985). (CONF-850558—).

From Conference on lasers and electro-optics; Baltimore, MD, USA (21 May 1985).

The authors report on the characterization and performance of the 24-beam Omega laser facility under full third harmonic (351-nm) upconversion. This system provides for the first time a multi-beam laser facility for the illumination of spherical targets with UV laser light in symmetric irradiation conditions with energies in the kilojoule range. This facility is capable of providing sufficient irradiation uniformity to test concepts of direct drive laser fusion with UV-driven ablation targets. The results of initial studies of ablatively driven DT-fueled glass microballoon targets will be described. The 24-beam Omega Nd:phosphate glass facility is capable of providing at 1054 nm output powers in excess of 10 TW in short (<100-psec) pulses and maximum energies of $\approx$4 kJ in nanosecond duration pulses. Focused with f/3 lenses in a small regular rhombicuboctahedral array, it provides a reliable ($>10^4$ full system shots to date) irradiation facility with beam synchronism of $\approx$3 psec, beam placement accuracy on target of 10 μm, and interbeam energy variance of $\approx$2%. From measured target plane intensity distributions, overall illumination uniformity with tangentially focused beams is estimated to be $\approx$5%. In 1984, a symmetric set of six beams was upconverted to 351-nm radiation using the polarization-mismatch scheme developed by Craxton. Monolithic cells of 20-cm clear aperture containing both frequency and doubler and tripler type II KDP crystals in index-matching propylene carbonate liquid were incorporated to output of six of the Omega beams with a full set of UV beam diagnostics.

39415 **Design and performance of the Nova frequency conversion system.** Summers, M.A.; Williams, J.D.; Johnson, B.C.; Eimerl, D. (Lawrence Livermore National Lab., P.O. Box 5508, Livermore, CA). pp 256 of Digest of technical papers from the OSA/IEEE 1985 conference on lasers and electro-optics. Washington, DC; Optical Society of America (1985). (CONF-850558—).

From Conference on lasers and electro-optics; Baltimore, MD, USA (21 May 1985).

The Nova laser is equipped with ten large-aperture (74-cm) potassium dihydrogen phosphate (KDP) crystal arrays capable of converting the fundamental wavelength (1.054 μm) to the visible (0.527-μm) or ultraviolet (0.351-μm) light. Each array assembly consists of a 3 x 3 deep-web aluminum eggcrate, which supports two crystal arrays configured in the quadrature 2ω/cascade 3ω architecture. The individual crystals are precisely machined so that the phase-matched direction is accurately located with respect to the crystal surface normal (+-30 μrad). The eggcrate supports each crystal so that the surface normals are parallel to within +-30 μrad. The completed assembly is angle tuned for peak conversion efficiency to +-30 μrad relative to the input beam. The Nova crystal arrays are installed just before the target focus lens where the beams are linearly polarized, collimated (+-50 μrad), and 74 cm in diameter. Angle tuning is facilitated by a precision two-axis gimbal which can also rotate the array about the beam direction. Each of the ten gimbals is controlled from a local control console or the main control room. Infrared operation is achieved by detuning the array so that no conversion takes place. Operation at 0.527 μ is achieved by angle tuning the assembly so that both crystals convert the fundamental to the second harmonic. The assembly is rotated about the beam axis to achieve the correct input polarization. Operation at 0.351 μm is achieved by tipping the assembly $\approx$5 mrad and rotating $\approx 10^6$ so as to tune the second crystal for mixing. The Nova frequency conversion subsystem has recently been activated, and preliminary measurements made on the optical quality and overall conversion efficiency are reported.

39416 **Transport of laser generated hot electrons through vacuum and low density foam.** Heidrich, J.E.; Lear, R.D.; Slivinsky, V.W.; Ault, S.K.; Landen, O.L.; Kilkenny, J.D. (Lawrence Livermore National Lab., Livermore, CA). pp 3B10 of IEEE conference record-abstracts of the 1985 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1985). (CONF-850699—). Contract W-7405-ENG-48.

From Conference on plasma sciences; Pittsburgh, PA, USA (3 Jun 1985).

A 1.06-μm laser focused to a 30-μm diameter was used to irradiate vacuum gap and 0.03g/cc foam targets with 80 to 130-J, 1-ns and 25 to 50-J, 250-ps pulses, respectively. The vacuum gap targets, fabricated with 11-μm polystyrene followed by 20 to 250-μm vacuum gaps followed by 13-μm Cu, were used to study gap-closure and space-charge-limit phenomena. While the low density foam targets, fabricated with layers of 1-μm parylene, 1-μm Fe, 50 to 400-μm foam and 13-μm Cu, were used to study electron transport and spreading. For both types of targets, the transported electrons incident upon the Cu foil produced Cu Kα x-rays that were used to indicate the number of transported electrons. For the foam targets, hot electrons incident upon the Fe foil produced Fe Kα x-rays, which indicate the initial electron production. An array of seven PIN detectors filtered respectively by Sc, Cr, Fe, Co, Ni, Se,

and Sn foils were used to measure the x-ray spectrum. The spatial distribution of transported electrons was obtained for both types of targets by comparing x-ray images obtained from two pinhole cameras; one used an Ni filter, which transmitted the Cu Kα x-rays produced by the hot electrons, and the other used a Co filter, which did not transmit the Cu Kα x-rays. For the foam targets, the camera using the Co filter produced an image of the Fe Kα x-rays and, thus, was used to determine the size of the hot electron spot produced in the initial parylene layer.

39417 Remote maintenance of TFTR components. Holloway, C.; Burgess, D.; Stringer, J.; Szirtes, T.; King, M. (Remote Handling Group, Princeton Plasma Physics Lab., Princeton, NJ). pp 1312 of Fusion technology 1984. Volume 2. Elmsford, NY; Pergamon Press (1985). (CONF-840915—). Contract AC02-76CH03073.

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

To support the TFTR experimental program leading to energy breakeven and beyond, a development program has been initiated to provide for the remote maintenance of selected reactor components. These components have been identified according to their probability of failure and the criticality to the success of the experimental mission. This paper describes the development of hardware and the presentation of mock-up demonstrations during the initial phase of the remote handling plan.

39418 Thermomechanical testing of beryllium for the JET/ISX-B beryllium limiter experiment. Watson, R.D.; Smith, M.F.; Whitley, J.B.; McDonald, J.M. (Sandia National Laboratories, Albuquerque, NM). pp 1283-1290 of Fusion technology 1984. Volume 2. Elmsford, NY; Pergamon Press (1985). (CONF-840915—). Contract AC04-76DP00789.

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

Materials testing of S-65-B beryllium has been conducted in support of the beryllium limiter experiment on the ISX-B tokamak at Oak Ridge National Laboratory. The S-65-B grade of hot-pressed beryllium was chosen over S-200-E because of its superior strength and ductility at elevated temperatures. The testing has included measurement of tensile and yield strength, ductility, Young's Modulus, thermal conductivity, and specific heat from 50°C to 700°C. Thermal fatigue testing of a 2.5 cm beryllium cube was conducted using an electron beam to apply a heat flux of 2.5 kw/cm^2 for 0.3 second pulses for 1500 cycles. Results from the tests are compared to elastic-plastic finite element stress calculations. The testing indicates that the ISX-B beryllium limiter should survive the tokamak environment without serious structural failure, although some surface cracking is expected to occur.

39419 Design and fabrication of a beryllium limiter for ISX-B. Edmonds, P.H.; Watson, R.D.; Smith, M.F. (Oak Ridge National Lab., Oak Ridge, TN). pp 1275-1282 of Fusion technology 1984. Volume 2. Elmsford, NY; Pergamon Press (1985). (CONF-840915—). Contract AC05-84OR21400;AC04-76DP00789.

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

A movable, temperature-controlled, beryllium rail limiter has been used in the Impurity Study Experiment (ISX-B) tokamak at the Oak Ridge National Laboratory (ORNL). The purpose of the experiment was to evaluate the suitability of the material for installation on the Joint European Torus (JET) experiment. The limiter was designed for a surface temperature rise of 600°C for each tokamak shot. This rise corresponds to a heat flux to the limiter surface of approximately 2.1 to 2.4 kW/cm^2 for 0.3 s. The experimental test was expected to require a lifetime of approximately 3000 neutral beam-heated plasma discharges to meet the planned surface fluence of 10^{25} hydrogen ions per cm^2. A temperature control system was used to maintain the base-plate temperature of the limiter at about 200°C. Normal plasma radius was 24 cm. The experimental results indicate that the beryllium limiter functions normally unless brought to melting point, when evaporated beryllium covers the liner walls, gettering the discharge. Under these conditions beryllium was the dominant impurity.

39420 Development of radiation-resistant organic insulators for magnetic fusion energy applications. Kasen, M.B. (National Bureau of Standards, Boulder, CO). pp 265-268 of Proceedings of the international conference on nuclear power plant aging, availability factor and reliability analysis. Goel, V.S. Metals Park, OH; American Society of Metals (1985). (CONF-850713—).

From International conference on nuclear power plant aging, availability factor and reliability analysis; San Diego, CA, USA (7 Jul 1985).

Current knowledge of cryogenic irradiation effects on organic-matrix electrical insulators required for the superconducting magnets in magnetically-confined, fusion energy systems is reviewed. It is concluded that the performance of presently available materials is marginal for such applications. Since the cost of substituting organic materials as insulators appears to be inordinately expensive, a program to develop organic insulators having improved performance is under way. This program will make use of the National Low Temperature Neutron Irradiation Facility currently being constructed at ORNL. The main features of the program are described.

39421 Aurora: A short-pulse multikilojoule KrF inertial fusion laser system. Rosocha, L.A. (Los Alamos National Lab., P.O. Box 1663, Los Alamos, NM). pp 186 of Digest of technical papers from the OSA/IEEE 1985 conference on lasers and electro-optics. Washington, DC; Optical Society of America (1985). (CONF-850558—).

From Conference on lasers and electro-optics; Baltimore, MD, USA (21 May 1985).

Aurora is a laser system that serves as an operating technology demonstration prototype for large-scale high-energy KrF laser systems of interest for inertial fusion applications. This system will incorporate the following elements to achieve an end-to-end 248-nm laser fusion concept demonstration: an injection-locked oscillator-amplifier front end; an optical angular multiplexer to produce 96 encoded optical channels each of 5-nsec duration; a chain of four electron-beam-driven KrF laser amplifiers; automated alignment systems for beam alignment; a decoder to provide for pulse compression of some fraction of the total beam train to be delivered to target, and a target chamber to house and diagnose fusion targets. The front end configuration uses a stable resonator master oscillator to drive an injection-locked unstable resonator slave oscillator. An extension of existing technology has been used to develop an electrooptic switchout at 248 nm that produces a 5-nsec pulse from the longer slave oscillator pulse. This short pulse is amplified by a postamplifier. Using these discharge lasers, the front end then delivers at least 250 mJ of KrF laser light output to the optical encoder.

39422 Performance of the large aperture module of the Aurora krypton fluoride laser system. York, G.W.; Czuchlewski, S.J.; Rosocha, L.A.; Salesky, E.T. (Los Alamos National Lab., P.O. Box 1663, Los Alamos, NM). pp 188 of Digest of technical papers from the OSA/IEEE 1985 conference on lasers and electro-optics. Washington, DC; Optical Society of America (1985). (CONF-850558—).

From Conference on lasers and electro-optics; Baltimore, MD, USA (21 May 1985).

The large aperture module (LAM) is the final amplifier of the Los Alamos Aurora krypton fluoride (KrF) laser system. An artist's conception of the device is shown. It consists of a laser chamber with a 1-X1-m aperture and a 2-m active length which is directly pumped by opposing 1-X2-m electron beams (up to 675 kV at 20A/cm^2). Each electron gun is driven by two 2.7-Ω water pulse forming lines (PFLs) connected in parallel. The PFLs are each 10.7m long giving a 650-nsec pump pulse. Each pair of water lines is pulse charged by a Marx generator capable of producing up to 1.8 MV. A pair of Helmholz coils is provided to prevent beam pinching in the diodes and to ensure uniform pumping in the laser gas volume. The laser chamber can be filled with up to 1.5 atm of an Ar/Kr/F_2 lasing mixture.

39423 High-power target plane characterization diagnostics for the Nova laser. Ozarski, R.G.; Bender, D.A.; Gim, B.M.; Seppala, L.G. (Lawrence Livermore National Lab., P.O. Box 5508, Livermore, CA). pp 194 of Digest of technical papers from the OSA/IEEE 1985 conference on lasers and electro-optics. Washington, DC; Optical Society of America (1985). (CONF-850558—).

From Conference on lasers and electro-optics; Baltimore, MD, USA (21 May 1985).

The intensity distribution on a fusion target is an important quantity in understanding the performance of ICF targets. The extremely high intensity at the focus of the Nova laser and the geometry of the ten frequency-converted Nova laser beams have required a new approach to recording the far-field spatial and temporal intensity distribution. A diagnostic package to characterize the focal plane on Nova, know as the opposed part diagnostic (OPD), was developed for Nova. The OPD uses an inverse Cassegrain design to image the target plane of Nova from a port opposite the irradiating beam to be characterized. The OPD consists of two sections: a telescope module and a camera module. The telescope section is an inverse Cassegrain reflector design which is inserted into the target chamber. Because of space constraints, the telescope module folds into itself for insertion and then unfolds into the chamber. It primarily is a 74-cm aperture reflector. The energy density of the frequency-converted Nova beam at 0.53 and 0.35μm is too high for dielectric coatings. Therefore, the 4% Fresnel reflection of the uncoated primary is used, and the remainder of the beam energy is absorbed behind the primary. Use of the Fresnel reflection also avoids the distortion which would be induced in a refractive system due to the intensity dependent index of refraction (B integral). The secondary is also a Fresnel reflector which lowers the intensity sufficiently so that refracting optics can be used to collimate the beam and pass it through a vacuum window to the camera module outside the target chamber.

39424 Experimental lithium system experience. Atwood, J.M.; Berg, J.D.; Kolowith, R.; Miller, W.C. (Westinghouse Hanford Co., Richland, WA, USA). pp 641-346 of Liquid metal engineering and technology. 3 Vols. Proceedings of the 3. international conference held in Oxford on 9-13 April 1984. Vol. 2. London, England; British Nuclear Energy Society (1984). (CONF-840411—).

From 3. meeting on liquid metal in energy applications; Oxford, UK (9 Apr 1984).

The Experimental Lithium System is a test loop built to support design and operation of the Fusion Materials Irradiation Test Facility. ELS has achieved over 15,000 hours of safe and reliable operation. An extensive test program has demonstrated satisfactory performance of the system components, including an electromagnetic pump, lithium jet target, and vacuum system. Data on materials corrosion and behavior of lithium impurities are also presented.

39425 Testing of the prototype FMIT target with liquid lithium. Miller, W.C.; Annese, C.E.; Berg, J.D.; Miles, R.R. (Westinghouse Hanford Co., Richland, WA, USA). pp 333-340 of Liquid metal engineering and technology. 3 Vols. Proceedings of the 3. international conference held in Oxford on 9-13 April 1984. Vol. 2. London, England; British Nuclear Energy Society (1984). (CONF-840411—).

From 3. meeting on liquid metal in energy applications; Oxford, UK (9 Apr 1984).

Testing of a molten lithium target was performed to evaluate hydraulic stability, determine surface evaporation rates, and map the detailed contour of the high speed, free surface wall jet. The results confirmed predictions by demonstrating acceptable performance of a prototype target.

39426 Design of liquid lithium pumps for FMIT. Adkins, H.E.; Thorne, W.L.; Atwood, J.M. (Westinghouse Hanford Co., Richland, WA, USA). pp 347-352 of Liquid metal engineering and technology. 3 Vols. Proceedings of the 3. international conference held in Oxford on 9-13 April 1984. Vol. 2. London, England; British Nuclear Energy Society (1984). (CONF-840411—).

From 3. meeting on liquid metal in energy applications; Oxford, UK (9 Apr 1984).

In the Fusion Materials Irradiation Test (FMIT) facility, a jet of liquid lithium is bombarded by 35 meV deuterons to generate high energy neutrons for materials testing. The FMIT lithium system will include two electromagnetic (EM) pumps, a 750 gpm main pump and a 10 gpm auxiliary pump. The larger pump was designed and built in 1982, following extensive testing of a similar pump in the Experimental Lithium System (ELS). Design of the auxiliary pump has been completed, but fabrication has not started. This paper discusses the design considerations leading to selection of the Annular Linear Induction Pump (ALIP) concept for these applications. Design parameters, fabrication procedures, and results of pump testing are also reviewed.

39427 Application of lead and lithium-lead in fusion reactor blankets. Gordon, J.D.; Garner, J.K.; Hoffman, N.J. (TRW Energy Development Group, Redondo Beach, CA, USA; Rockwell International Corp., Canoga Park, CA, USA. Energy Technology Engineering Center). pp 329-336 of Liquid metal engineering and technology. 3 Vols. Proceedings of the 3. international conference held in Oxford on 9-13 April 1984. Vol. 1. London, England; British Nuclear Energy Society (1984). (CONF-840411—).

From 3. meeting on liquid metal in energy applications; Oxford, UK (9 Apr 1984).

Applications of lead and the eutectic of lead and lithium, 83Pb-17Li, in fusion blankets are discussed. Critical design issues associated with each heavy liquid metal are presented and conceptual designs that mitigate these problems are shown.

39428 Susceptibility of 2.25 Cr-1 Mo steel to liquid metal embrittlement by lithium-lead solutions. Eberhard, B.A.; Mullinaux, B.A.; Edwards, G.R. (Colorado School of Mines, Golden, USA). pp 337-345 of Liquid metal engineering and technology. 3 Vols. Proceedings of the 3. international conference held in Oxford on 9-13 April 1984. Vol. 1. London, England; British Nuclear Energy Society (1984). (CONF-840411—).

From 3. meeting on liquid metal in energy applications; Oxford, UK (9 Apr 1984).

Liquid metal induced embrittlement is characterized and shown to occur in 2 1/4Cr-1Mo steel wetted by lead, lithium, or a 99 atomic percent lithium - 1 atomic percent lead liquid. The severity of embrittlement in this liquid/solid metal couple is shown to be quite dependent on microstructure as determined by heat treatment. LMIE susceptibility is best reduced by heat treatments using low tempering temperatures and long tempering times.

99 GENERAL AND MISCELLANEOUS

39429 (DOE/MA—0229) Cost and schedule control systems criteria for contract performance measurement. Systems review/surveillance guide. (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Project and Facilities Management). Jun 1986. 130p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE86012460.

When the Department of Energy (DOE) Cost and Schedule Control Systems Criteria (CSCSC) are applied to a contract in accordance with DOE 2250.1B, the contractor's management control systems are reviewed by DOE to determine their initial and continuing compliance with the CSCSC. This document provides guidance to DOE personnel responsible for applying the CSCSC requirements on contracts, reviewing contractor implementation of the requirements, and surveillance to assure continuing compliance with the CSCSC.

39430 (DOE/RL/01830—H2) Department of Energy least-cost utility planning research agenda. (Temple, Barker and Sloane, Inc., Lexington, MA (USA)). 22 May 1986. Contract AC06-76RL01830. 36p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012638.

The US Department of Energy (DOE) Office of Conservation and Renewable Energy recently received an appropriation of nearly $1,000,000 to promote "least-cost planning" within the nation's electric and natural gas utilities. In accordance with the

provisions of that appropriation, the Office of Conservation and Renewable Energy has undertaken the development of a research plan to detail the most efficient and effective uses of the budget. Temple, Barker and Sloane (TBS) was retained as a subcontractor to Pacific Northwest Labs to assist in the development of this plan. This report describes TBS's findings from an extensive series of interviews on least-cost planning and recommendations for DOE's role in promoting the concept.

39431 **(SAND—86-1485C) Scientific and technical terminology in US translations.** Newman, P. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 7p. (CONF-860881—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012285.

From Asia Pacific regional conference on translation; Kuala Lumpur, Malaysia (17 Aug 1986).

Recommendations for terminology research in a country like the US include: use a bilingual dictionary with caution; translate only in familiar fields; literature published in the target language is the best source of new terminology; use secondary sources such as indexes and abstracts; establish personal contacts; record the answer; and share your knowledge. 39432 **(AD-A—165865/7/XAB) Factors limiting endurance of armor, artillery, and infantry units under simulated NBC conditions.** Rauch, T.M.; Tharion, W.J.; Banderet, L.E.; Lussier, A.R. (Army Research Inst. of Environmental Medicine, Natick, MA (USA)). 13 Mar 1986. 15p. (USARIEM-M—18/86). NTIS, PC A02/MF A01.

The war of the future will require 72-hour operations in environments contaminated with nuclear/biological/chemical (NBC) agents. The 1985 P2NBC2 (Physiological and Psychological Effects of NBC and Extended Operations on Combined Arms Crews) Program assessed soldier endurance and performance under simulated NBC conditions. A total of 175 soldiers were observed during four tests differing in design, site, climatic conditions, and performance demands. In all but one of the iterations where the full chemical-protective ensemble (MOPP 4) was used without cooling, soldier endurance fell far short of the projected requirement. Psychological data were analyzed to determine which factors were associated with the incidence of casualties. The findings showed that perceived intensity of symptoms resembling the hyperventilation syndrome was significantly greater in soldiers classified as Casualties. Five of these symptoms (painful breathing, difficulty breathing, shortness of breath, headache, and nausea) showed Casualty-Survivor differences in all tests. Symptom intensity was attributed to two factors. (1) External conditions. Thermal stress exacerbated the five basic symptoms, induced others (tetany and paresthesia), and decreased endurance. Periodic relief from respirator use attenuated these symptoms and enhanced endurance. (2) Individual differences. Significant Casualty-Survivor differences in anxiety, depression, and cognitive strategy scores indicated that perception of hyperventilation symptoms and endurance were related to personality variables. Hyperventilation symptoms could incapacitate the soldier or induce removal of the protective mask under actual chemical attack.

39433 **(AD-A—166115/6/XAB) West European and East Asian perspectives on defense, deterrence, and strategy. Volume 6. South Korean perspectives on defense, deterrence, and strategy. Technical report, 1 December 1981-30 November 1982.** Pfaltzgraff, R.L.; Dougherty, J.E.; Davis, J.K.; Perry, C.M. (Institute for Foreign Policy Analysis, Inc., Cambridge, MA (USA)). 11 Apr 1984. 156p. NTIS, PC A08/MF A01.

This study addresses the international security perspectives of the Republic of Korea (South Korea). Particular emphasis is placed on the way in which American, Soviet, Chinese and Japanese interests intersect on the Korean Peninsula and on their impact upon the military balance between North and South Korea. A major portion of this analysis is devoted as well to an examination of inter-Korean relations, spotlighting the varying security implications of the continued partition, as opposed to the eventual reunification of the two Koreas. The importance to South Korea of the Seoul-Washington-Tokyo relationship is discussed, as well as the effect of the Sino-Soviet dispute on South Korean defense and foreign policies. In order to clarify further the strategic perspectives of key decision makers in Seoul, the study reviewed and assessed South Korean views on such controversial issues as the expansion of Japan's self-defense forces, the withdrawal of the U.S. ground troops from the Korean peninsula, Sino-Soviet moves toward rapprochement, and the proliferation of nuclear weapons in Northeast Asia.

39434 **(AD-A—166162/8/XAB) West European and East Asian perspectives on defense, deterrence, and strategy. Volume 1. Main report. Technical report, 1 December 1982-15 May 1984.** Pfaltzgraff, R.L.; Davis, J.K.; Dougherty, J.E.; Perry, C.M. (Institute for Foreign Policy Analysis, Inc., Cambridge, MA (USA)). 16 May 1984. 87p. NTIS, PC A05/MF A01.

This report provides a summary, analysis and categorization of the perspectives of defense elites in Western Europe, together with an examination of such perspective in the People's Republic of China, with special emphasis on nuclear capabilities and directly related security issues. In Europe, attention is focused on Great Britain, France, the Federal Republic of Germany, Belgium, The Netherlands, Portugal, and Spain. As a distinctive feature of this report, four schools of strategic thought have been developed for each of the European countries under study. Based upon a comprehensive assessment of the defense views held by strategic theoreticians, prominent government policymakers, political party leaders, and others active in the defense debates of Western Europe, these schools of thought provide a unique tool for identifying and evaluating key issues and spokesmen in the West European security debate of the 1980s. The overall objective of this study is to identify and assess the continuities and discontinuities of security perspectives among West European countries (especially concerning NATO's nuclear weapons options) and, on the basis of this analysis, to examine the prospects for maintaining, or strengthening, the consensus upon which European security is based. In its assessment of Chinese security perspectives, this report focuses on the evaluation of the PRC's strategic approach to international affairs and on the effects of recent personnel and organizational changes in the Chinese hierarchy on the PRC's foreign and defense policies.

39435 **(AD-A—166312/9/XAB) US national security policy. Revision. Final report.** (National Security Research, Fairfax, VA (USA)). Mar 1986. 253p. NTIS, PC A12/MF A01.

This essay is intended to survey the basic framework within which the United States will make national security decisions in the year 2010, focusing especially on American orientation toward the Atlantic (Europe) or the Pacific (Asia). Such a task for projecting the international environment some 30 years into the future is an intrinsically speculative intellectual exercise. The idea of this essay is that the existing international environment will more likely than not continue to be the pattern in 2010 – primarily because of the constraints established by the existence of nuclear weapons and the probable continuance of the U.S.-Soviet rivalry as the central factor in world politics. This suggests that the relative importance the United States has given to the Atlantic/Europe and the Pacific/Asia since 1945 will not shift dramatically. Section III then examines circumstances that might bring about a significant change or revolution in world politics by 2010, and the impact that this situation might have on the Atlantic-Pacific equation. This situation has two important implications for the US Navy and the associated U.S. power-projection forces. First, in terms of their contribution to the central U.S. alliance system, they should develop the follow-through for the defeat of the Red Fleet that will remain their overriding objective. Second, in terms of its contribution to the peripheral U.S. alliance system, the USN should refine its ability to fight and win limited conflicts.

39436 (LA-UR—86-2034) Three-level approach to quality programs for research, development and production. Davis, A.H.; Bussolini, P.L.; Geoffrion, R.R. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 6p. (CONF-860654—24). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012370.

From 27. annual meeting of the Institute of Nuclear Materials Management; New Orleans, LA, USA (22 Jun 1986).

A primary mission of the Los Alamos National Laboratory is to develop nuclear weapons systems for the Department of Defense. The activities included in this effort cover a broad spectrum, ranging from pure research to routine production. In order to provide a workable framework for a comprehensive quality assurance program for these varied activities, we have proposed a three-level structure of quality plans, corresponding to a rough classification of the weapons work into three general categories. These categories are: (1) research into materials and processes, and preliminary development; (2) design, development, and fabrication of prototype components; (3) routine production, analysis, or refinement activities. The first category requires a quality program to assure the validity, reliability, and retrievability of the information developed; this is accomplished by a conscientious application of what is generally recognized as good laboratory practice. The second category requires in addition a strong emphasis on design review and inspection. For the third category, a comprehensive quality program is appropriate.

39437 (AD-A—165693/3/XAB) Expert systems for C3I. Volume 1. A user's introduction. Final report. Clapp, J.A.; Hockett, S.M.; Prelle, M.J.; Tallant, A.M.; Triant, D.D. (Mitre Corp., Bedford, MA (USA)). Oct 1985. 60p. NTIS, PC A04/MF A01.

There has been a tremendous burgeoning of interest in artificial intelligence (AI) over the last few years. Investments of commercial and government sponsors reflect a widespread belief that AI is now ready for practical applications. The area of AI currently receiving the greatest attention and investment is expert system technology. Most major high tech corporations have begun to develop expert-systems, and many software houses specializing in expert system tools and applications have recently appeared. The defense community is one of the heaviest investors in expert-system technology, and within this community one of the application areas receiving greatest attention is C3I. Many ESD programs are now beginning to ask whether expert-system applications for C3I are ready for incorporation into ESD-developed systems, and, if so, what are the potential benefits and risks of doing so. This report was prepared to help ESD and MITRE personnel working on acquisition programs to address these issues and to gain a better understanding of what expert systems are all about. The primary intention of this report is to investigate what expert-systems are and the advances that are being made in expert system technology for C3I applications. The report begins with a brief tutorial on expert systems, emphasizing how they differ from conventional software systems and what they are best at doing.

39438 (AD-A—166058/8/XAB) Using multiple inverted trees for parallel updating of graph properties. Technical report. Ramakrishnan, I.V. (Maryland Univ., College Park (USA). Dept. of Computer Science). May 1985. 28p. (CAR-TR—124). NTIS, PC A03/MF A01.

Fast parallel algorithms are presented for updating the distance matrix, shortest paths for all pairs and biconnected components for an undirected graph and the topological ordering of vertices of a directed acyclic graph when an incremental change has been made to the graph. The kinds of changes that are considered here include insertion of a vertex of insertion and deletion of an edge or a change in the weight of an edge. The machine model used is a parallel random-access machine which allows simultaneous reads but prohibits simultaneous writes into the same memory location. The algorithms described in this paper require O(log n) time and use O(N-cubed) processors. These algorithms are efficient when compared to previously known 0(log-squared of n) time start-over algorithms for initial computation of the above-mentioned properties of graphs. The previous solution is maintained in multiple inverted trees (a rooted tree where a child node points toward its parent) and after a minor change the new solution is rapidly recomputed from these trees

39439 (AD-A—166062/0/XAB) Sequential and parallel matrix computations. Interim report, 1 September 1984-31 August 1985. Datta, B.N. (Northern Illinois Univ., Dekalb (USA)). Nov 1985. 6p. NTIS, PC A02/MF A01.

The major objectives of this project are to develop computational algorithms, both sequential and parallel, for several important linear-algebra problems that arise in the design and analysis of linear control systems governed by the systems of ordinary differential equations. These include controllability problems, stability and inertia problems, pole assignment problems, matrix equations problems, relative primeness of polynomials and matrices and the Cauchy-index problems of rational functions, etc. Besides, a part of the project is devoted to the theoretical study of the parallel arithmetic complexity of these problems; that is, how fast these problems can be solved in parallel assuming that sufficiently many processors are available. Though some numerically viable sequential algorithms have been designed for some of these problems in recent years, parallel algorithms and algorithms for large-scale problems are virtually nonexistent.

39440 (AD-A—166095/0/XAB) Parallel matrix computations. Interim report, 1983-1984. Stewart, G.W.; O'Leary, D.P. (Maryland Univ., College Park (USA). Dept. of Computer Science). 28 Mar 1985. 13p. NTIS, PC A02/MF A01.

This project concerns the design and analysis of algorithms to be run in a processor-rich environment. Focus is primarily on algorithms that require no global control and that can be run on systems with only local connections among processors. Properties of these algorithms are investigated both theoretically and experimentally. The experimental work is done on the ZMOB, a working parallel computer operated by the Laboratory for Parallel Computation of the Computer Science Department at the University of Maryland. To give the work direction, the authors focused on two areas: 1. dense problems from numerical linear algebra; and 2. the iterative and direct solution of sparse linear systems. The ZMOB hardware and the research projects pursued under this grant support are discussed.

39441 (ANL—85-63) Transforming Fortran DO loops to improve performance on vector architectures. Cowell, W.R.; Thompson, C.P. (Argonne National Lab., IL (USA)). May 1986. Contract W-31-109-ENG-38. 39p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012086.

The performance of programs executing on vector computers is significantly improved when the number of accesses to memory can be reduced. Unrolling Fortran DO loops, followed by substitutions and eliminations in the unrolled code, can reduce the number of loads and stores. The unrolling transformation and associated transformations of Fortran DO loops are characterized, and a set of software tools to carry out these transformations is described. The tools use the machinery available in Toolpack and have been integrated into that environment. The results of applying these tools to a collection of linear algebra subroutines are included. 7 refs., 2 figs.

39442 (CONF-860848—2) Psychology of developing and designing expert systems. Tonn, B.; MacGregor, D. (Oak Ridge National Lab., TN (USA); Decision Research, Eugene, OR (USA)). 1986. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010019.

From National conference on artificial intelligence; Philadelphia, PA, USA (11 Aug 1986).

This paper discusses psychological problems relevant to developing and designing expert systems. With respect to the former, the psychological literature suggests that several cognitive biases may affect the elicitation of a valid knowledge base from the expert. The literature also suggests that common expert system inference engines may be quite inconsistent with reasoning heuristics

employed by experts. With respect to expert system user interfaces, care should be taken when eliciting uncertainty estimates from users, presenting system conclusions, and ordering questions.

30443 (N—86-19008) Partitioning and packing mathematical simulation models for calculation on parallel computers. Arpasi, D.J.; Milner, E.J. (National Aeronautics and Space Administration, Cleveland, OH (USA). Lewis Research Center). 1986. 38p. (NASA-TM—87170; E—2808; CONF-860877—1). NTIS, PC A03/MF A01.

From International conference on parallel processing; St. Charles, IL, USA (19 Aug 1986).

The development of multiprocessor simulations from a serial set of ordinary differential equations describing a physical system is described. Degrees of parallelism (i.e., coupling between the equations) and their impact on parallel processing are discussed. The problem of identifying computational parallelism within sets of closely coupled equations that require the exchange of current values of variables is described. A technique is presented for identifying this parallelism and for partitioning the equations for parallel solution on a multiprocessor. An algorithm which packs the equations into a minimum number of processors is also described. The results of the packing algorithm when applied to a turbojet engine model are presented in terms of processor utilization.

30444 (SAND—86-0601) Specification and installation of a MILNET host. George, M. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1986. Contract AC04-76DP00789. 40p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86012731.

A MILNET host computer was specified and installed to meet the needs of the growing user community at Sandia. The configuration of this host is described from specification through installation and testing. Also included are descriptions of the MILNET network and administrative procedures for the system. 5 figs.

30445 (SOL—86-11) Need to do planning under uncertainty and the possibility of using parallel processors for this purpose. Dantzig, G.B. (Stanford Univ., CA (USA). Systems Optimization Lab.). Apr 1986. Contract AS03-76ER72018. 28p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86012158.

Progress in solving large-scale problems, especially those involving uncertainty is outlined. Solving stochastic dynamic programs with the aid of parallel processing is discussed. The mathematical structure of deterministic and stochastic planning problems is given. The author stresses the use of these techniques to solve politically relevant planning problems which involve a great deal of uncertainty. 30 refs. (DWL)

30446 (UCID—20761) Network evaluation for F-Division. Boyd, J.K.; Carr, R.B.; Lee, F.D. (Lawrence Livermore National Lab., CA (USA)). 16 May 1986. Contract W-7405-ENG-48. 19p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86012603.

This report contains an evaluation of the computer and computer network needs of F-Division. The main intent is to identify ways in which all computational aspects of F-Division might interact more effectively. This includes the physics, engineering, and clerical staffs. Consideration is given to usage of the Octopus computer system, computer control of experiments, data analysis, computer aided design (CAD) and word processing issues.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Response of spent LWR fuel to extreme environments, 11:38556 (R;US)

Battelle Columbus Labs., OH (USA). Analytical and Structural Chemistry Center
Selected organic pollutant emissions from unvented kerosene heaters, 11:37311 (R;US)

Battelle-Institut e.V., Frankfurt am Main (Germany, F.R.)
Device for measuring and controlling the energy consumption of heating installations. Summary report, 11:38156 (R;DE)

Battelle Memorial Inst., Columbus, OH (USA). Office of Nuclear Waste Isolation
Salt dissolution and collapse at the Wink Sink in West Texas, 11:39002 (R;US)
Salt repository sealing materials development program: 5-year work plan, 11:37528 (R;US)

Battelle New England Marine Research Lab., Duxbury, MA (USA)
Study of biological processes on the US Mid-Atlantic slope and rise. Second interim report. Report for May 1984-September 1985, 11:38901 (R;US)

Bechtel National, Inc., Oak Ridge, TN (USA). Advanced Technology Div.
Design report for the interim waste containment facility at the Niagara Falls Storage Site, 11:37648 (R;US)

Bechtel National, Inc., San Francisco, CA (USA)
Coil protection for a utility scale superconducting magnetic energy storage plant, 11:38062 (R;US)

Bendix Field Engineering Corp., Grand Junction, CO (USA)
Procedure manual for the estimation of average indoor radon-daughter concentrations using the radon grab-sampling method, 11:37651 (R;US)

Bonneville Power Administration, Portland, OR (USA)
Direct service industry options. Final enrivonmental impact statement, 11:38922 (R;US)

Brandeis Univ., Waltham, MA (USA). Dept. of Physics
Research in elementary particle physics. Technical progress report, June 1, 1985-May 31, 1986, 11:39129 (R;US)

Brigham Young Univ., Provo, UT (USA)
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)

Brigham Young Univ., Provo, UT (USA). Dept. of Physics and Astronomy
Muon-induced fusion: experiments at LAMPF, 11:39355 (R;US)

British Association for the Advancement of Science, London
Selected papers from the annual meeting of the British Association for the Advancement of Science held at Strathclyde, Scotland on August 26-30, 1985. Section A, 11:38100 (R;US)
Selected papers from the annual meeting of the British Association for the Advancement of Science held at Strathclyde, Scotland, August 26-30, 1985, Section C, 11:37403 (R;US)

British Nuclear Energy Society, London
Application of lead and lithium-lead in fusion reactor blankets, 11:39427 (BA;GB)
Design of liquid lithium pumps for FMIT, 11:39426 (BA;GB)
Experimental lithium system experience, 11:39424 (BA;GB)
Susceptibility of 2.25 Cr-1 Mo steel to liquid metal embrittlement by lithium-lead solutions, 11:39428 (BA;GB)
Testing of the prototype FMIT target with liquid lithium, 11:39425 (BA;GB)

Brookhaven National Lab., Upton, NY (USA)
Ab initio models for electron tunnelling between transition metal complexes. Final report, 11:38490 (R;US)
Accelerated Leach Test(s) Program. Annual report, 11:37637 (R;US)
Estimated safety significance of Generic Safety Issue 61, 11:38025 (R;US)
Functional pendent groups affecting chemisorption and adherent properties of polyelectrolyte-zinc phosphate composite conversion coatings, 11:38227 (R;US)
Hadronic production of J/sup PC/ = 2^{++} glueballs, 11:39125 (R;US)
Soil-structure interaction effects on the reliability evaluation of reactor containments, 11:37993 (R;US)
Soil-structure interaction. Volume 3. Influence of ground water, 11:37998 (R;US)
Survey of high field superconducting material for accelerator magnets, 11:38705 (R;US)

Bureau of Mines, Pittsburgh, PA (USA). Pittsburgh Research Center
Performance characteristics of large-capacity face-ventilation systems for oil-shale mining. Report of Investigations 1986, 11:37506 (R;US)
Short-delay blasting in underground coal mines. Information Circular/1986, 11:37345 (R;US)

Bureau of Mines, Tuscaloosa, AL (USA). Tuscaloosa Research Center
Resource recovery from municipal solid waste. Bulletin, 11:38208 (R;US)

Bureau of Mines, Twin Cities, MN (USA). Twin Cities Research Center
Delayed-blasting tests to improve highwall stability - a final report. Report of Investigations/1986, 11:37344 (R;US)

Bureau of Reclamation, Boise, ID (USA). Pacific Northwest Region
Finding of no significant impact. Proposed fish passage improvements at Three Mile Falls Diverson Dam, Umatilla River, Oregon, 11:37727 (R;US)

Business and Technological Systems, Inc., Seabrook, MD (USA)
Geomagnetic main field modeling using magnetohydrodynamic constraints, 11:38988 (R;US)

Butler Univ., Indianapolis, IN (USA). Holcomb Research Inst.
Comparison of tropical forest surveys, 11:38859 (R;US)

C

California Inst. of Tech., Pasadena (USA)
Low energy x-ray spectra measured with a mercuric iodide energy dispersive spectrometer in a scanning electron microscope, 11:38716 (R;US)
Oblique impact: a process for providing meteorite samples of other planets, 11:39026 (R;US)
Shock-induced volatile loss from a carbonaceous chondrite: implications for planetary accretion, 11:39025 (R;US)
Two types of flare associated filament eruptions, 11:39028 (R;US)

California Inst. of Tech., Pasadena (USA). Arthur A. Noyes Lab. of Chemical Physics
Intense beam of metastable H_3 molecules, 11:39066 (R;US)

California Polytechnic State Univ., San Luis Obispo (USA)
Proof of feasibility of a novel inverter for photovoltaic power conditioning, 11:37767 (R;US)

California State Polytechnic Univ., Pomona (USA). Dept. of Mechanical Engineering
Energy and availability transport losses in a point-focus solar concentrator field, 11:37801 (R;US)

California Univ., Berkeley (USA). Dept. of Mechanical Engineering
New temperature correlation for forced-ventilated compartment fires, 11:38831 (R;US)

California Univ., Riverside (USA)
Muon spin relaxation and Knight shift in the heavy-fermion superconductor UPt_3, 11:38246 (R;US)

California Univ., Santa Barbara (USA). Dept. of Mechanical and Environmental Engineering
Free convection heat transfer in the critical region of binary fluid mixtures, 11:38622 (R;US)

California Univ., Santa Barbara (USA). Quantum Inst.
Mean-trajectory Gaussian wave-packet approach to rotationally inelastic molecule-surface diffraction. Annual report, 11:39068 (R;US)
Multiple Gaussian wave-packet theory of H_2 diffraction and rotational excitation by collision with solid surfaces. Annual report, 11:39069 (R;US)
Strategy for time-dependent quantum-mechanical calculations using a Gaussian wave-packet representation of the wave function. Annual technical report, 11:39287 (R;US)
Temperature dependence of diffracted-beam intensities in atom-surface scattering. Annual technical report, 11:39067 (R;US)

Cambridge Univ. (UK). Cavendish Lab.
On the QCD 2->3 contributions to the hadroproduction of heavy quarks, 11:39165 (R;DE)

Carleton Univ., Ottawa, Ontario (Canada)
Observation of a new charmed meson, 11:39127 (R;DE)

Carleton Univ., Ottawa, Ontario (Canada). Dept. of Physics
Two photon decay widths of non-standard spin-0 bosons, 11:39168 (R;CA)

Carrier Corp., Syracuse, NY (USA). Research Div.
Monitoring of improved air-source heat pumps. Final report, 11:38154 (R;US)

Case Western Reserve Univ., Cleveland, OH (USA)
Environmental nitroarenes: an attempt to understand their mutagenic and carcinogenic properties, 11:38808 (R;US)

Catholic Univ. of America, Washington, DC. Dept. of Chemistry
Reaction intermediates in aromatic-fuel combustion. Final report, 18 July 1984-17 July 1985, 11:37482 (R;US)

CBI Industries, Inc., Plainfield, IL (USA). Research Lab.
Model test of a generic shelf-mounted OTEC (Ocean Thermal Energy Conversion) platform. Final report, 11:37780 (R;US)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. d'Analyse de Surete
Test of SEISPACE seismological DCPs in Ubaye (French Alps), 11:38986 (R;FR)

Central Electricity Generating Board, London (UK). Translations Section
Some properties of simulated heat-affected zones in Cr-Mo-V cast steel, 11:38350 (TJ;GB)

Centre de Recherches en Physique des Plasmas, Lausanne (Switzerland)
Papers contributed to the 13th European conference on controlled fusion and plasma physics by the TCA Group. Schliersee, Germany, April 1986, 11:39313 (R;CH)

Centro Informazioni Studi Esperienze, Milan (Italy)
Use of loop-seals for the control of the overpressures in hydraulic transients evolving in a sea service water system, 11:38017 (R;IT)

Ceramatec, Inc., Salt Lake City, UT (USA)
Alternative method for the removal of oxides of nitrogen and sulfur from combustion processes. Second quarterly technical status report, September 17-March 31, 1986, 11:38531 (R;US)

Chevron Corp., San Francisco, CA (USA). Medical Staff
Epidemiological study of Solvent Refined Coal (SRC) workers. Final report, August 1982-December 1985, 11:37386 (R;US)

Chicago Univ., IL (USA)
General constraints on the age and chemical evolution of the Galaxy, 11:39018 (R;US)
New results for rare muon decays, 11:39134 (R;US)
Search for rare muon and pion decay modes with the crystal box detector, 11:39133 (R;US)

Cincinnati Univ., OH (USA)
Muon spin relaxation and Knight shift in the heavy-fermion superconductor UPt_3, 11:38246 (R;US)

City Univ. of New York, NY (USA)
Soil-structure interaction. Volume 3. Influence of ground water, 11:37998 (R;US)

Cohen (S.) and Associates, Inc., McLean, VA (USA)
Model of sludge behavior in nuclear plant steam generators. Final report, 11:37903 (R;US)

Colorado School of Mines, Golden (USA)
Phase equilibria in the carbon dioxide + ethane system. Topical report, 11:37502 (R;US)
Susceptibility of 2.25 Cr-1 Mo steel to liquid metal embrittlement by lithium-lead solutions, 11:39428 (BA;GB)

Colorado School of Mines, Golden (USA). Dept. of Chemical Engineering and Petroleum Refining
Reactivity of coal in direct hydrogenation process. Technical progress report, March-May 1986, 11:37270 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Mechanical Engineering
Natural convection in an enclosure with discrete roughness elements on a vertical heated wall, 11:37793 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Physics
Properties of molecular solids and fluids at high pressures and temperatures. [Final report], 11:39071 (R;US)

Colorado Univ., Boulder (USA)
Metal reflectors in the EUV, 11:38578 (R;US)

Columbia Univ., New York (USA). School of Public Health
Peak exposures to nitrogen dioxide and study design to detect their acute health effects, 11:38822 (R;US)

Columbia Univ., Palisades, NY (USA). Lamont-Doherty Geological Observatory
Measurement of elastic properties and static strength. Final report, 1 July 1983-1 October 1984, 11:38784 (R;US)

Comision Nacional de Energia Atomica, San Carlos de Bariloche (Argentina). Centro Atomico Bariloche
Effect of magnetic fields on the electronic structure of density-wave systems, 11:38409 (R;US)

Commission of the European Communities, Karlsruhe (Germany, F.R.). European Inst. for Transuranium Elements
Fracture toughness in nuclear waste glasses and ceramics: environmental and radiation effects, 11:38356 (R;US)

Commission of the European Communities, Luxembourg. Directorate General Information Market and Innovation
Development of an impact capability for the three-dimensional fluid-structure interaction code - NEPTUNE, 11:38634 (BA;NL)
Implicit finite element structural dynamic formulation for long-duration accidents in reactor piping systems, 11:38566 (BA;NL)
Production of hot gas for drying processes using fluidised bed combustion of coal. Final report, 11:38195 (R;DE)
Prospects for hydrogen from advanced water electrolysis - based on results emanating from the EEC R and D subprogramme on hydrogen (1975-1983). Final report, 11:37695 (R;DE)
Recovery of energy by fluidised combustion of waste material arising from coal mining and coal processing. Final report, 11:37308 (R;DE)
Survey of combustion research in the European Community, 11:38662 (R;DE)

Committee on Science and Technology (U.S. Congress. House), Washington, DC
1985 science and technology posture hearing with the Director of the Office of Science and Technology Policy. Hearing before the Committee on Science and Technology, 99th Congress, First Session, No. 1, 11:38108 (R;US)
Space nuclear power generation, conversion and storage for the nineties and beyond. Subcommittee on Energy Research and Production to the Committee on Science and Technology, 99th Congress, First Session, 11:37948 (R;US)

Connecticut Univ., Storrs (USA). Dept. of Physics
Radiationless deactivation of low-field chromium complexes in solids. Final technical report, 31 August 1982-31 December 1985, 11:38575 (R;US)

Construction Technology Labs., Skokie, IL (USA)
Heat transfer characteristics of walls with similar thermal resistance values. Final report, 11:38164 (R;US)
Surface temperature measurement techniques for a calibrated hot box test specimen. Final report, 11:38165 (R;US)

Cornell Univ., Ithaca, NY (USA)
Comparison of tropical forest surveys, 11:38859 (R;US)
Kinetic and thermodynamic studies of pulsed laser irradiation, 11:38411 (R;US)
Mechanics of metal forming, 11:38245 (R;US)

Cowiconsult Raadgivende Ingenioerer A/S, Virum (Denmark)
Pipeline transport - an energy saving form of transportation, 11:38189 (R;DK;In Danish)
Veneer wall on the existing houses, 11:38162 (R;DK;In Danish)

Variation in properties of nuclear test areas and media at the Nevada Test Site, 11:39008 (R;US)
Wolter x-ray microscope calibration, 11:39367 (R;US)

Lehigh Univ., Bethlehem, PA (USA). Inst. of Thermo-Fluid Engineering and Science
Evaluation of convective film boiling models with nonequilibrium data in tubes, 11:38624 (R;US)

Levy (S.), Inc., Campbell, CA (USA)
Reactor Analysis Support Package (RASP). Volume 2. BWR event analysis guidelines. Final report, 11:38021 (R;US)

Linkoeping Univ. (Sweden). Dept. of Mathematics
Forest sector models, 11:38077 (R;SE;In Swedish)

Linkoeping Univ. (Sweden). Dept. of Mechanical Engineering
Electric power demand of the industry - means of controlling the loads, 11:38129 (R;SE;In Swedish)

Linkoeping Univ. (Sweden). Dept. of Water in Environment and Society
Water quality and regional development. Contributions to the Swedish water conservation history of the last century with examples from the Motala River Basin, 11:38097 (R;SE;In Swedish)

Lockheed Engineering and Management Services Co., Inc., Las Vegas, NV (USA)
Performance of RCRA (Resource Conservation and Recovery Act) Method 8280 for the analysis of dibenzo-p-dioxins and dibenzofurans in hazardous-waste samples, 11:38095 (R;US)

Lockheed Missiles and Space Co., Palo Alto, CA (USA)
Generation of field-sensitive interface states in commercial CMOS devices. Technical report, 1 September 1983-15 May 1984, 11:38733 (R;US)

Los Alamos National Lab., NM (USA)
Assay of TRU wastes containing (α,n) sources, 11:38471 (R;US)
Coil protection for a utility scale superconducting magnetic energy storage plant, 11:38062 (R;US)
Comparison of beta-ray polarizations in Fermi and Gamow-Teller transitions and SU(2)/sub L/ x SU(2)/sub R/ x U(1) models, 11:39132 (R;US)
Corrective measures technology for shallow land burial at arid sites: field studies of biointrusion barriers and erosion control, 11:37640 (R;US)
CO/sub 2/ laser sustained CW discharge atomic beam source, 11:39073 (R;US)
Design of the Mark 101 magnetic flux compression generator, 11:38752 (R;US)
Detection and evaluation of structural rock damage in the overburden at an underground base. Acoustic transmission method, 11:38987 (R;US)
Directions for reactor target design based on the US heavy ion fusion systems assessment, 11:39362 (R;US)
Effect of chain rigidity on conductivity of conjugated polymers, 11:38393 (R;US)
Effect of residual strain on twinning in shock-loaded copper, 11:38243 (R;US)
Effect of strain and strain rate on residual microstructures in copper, 11:38244 (R;US)

Erosion control technology: a user's guide to the use of the Universal Soil Loss Equation at waste burial facilities, 11:37608 (R;US)
Facility model for the Los Alamos Plutonium Facility, 11:37673 (R;US)
Fiber optic, Faraday rotation current sensor, 11:38738 (R;US)
Forward and reverse rearrangements of dislocations in cell walls, 11:38242 (R;US)
Heavy fermion materials, 11:38247 (R;US)
Influence of equipartitioning on the emittance of intense charged-particle beams, 11:38690 (R;US)
Integrated heat pipe-thermal storage design for a solar receiver, 11:38065 (R;US)
LAVA: a conceptual framework for automated risk assessment, 11:37678 (R;US)
Learning to live with holdup, 11:37674 (R;US)
Liquid metal thermoacoustic engine, 11:38681 (R;US)
Longitudinal emittance measurement at the ATS, 11:38689 (R;US)
Los Alamos x-ray characterization facilities for plasma diagnostics, 11:38579 (R;US)
Magnetic behavior in the U/sub 1-x/Th/sub x/Cu_2Si_2 system, 11:38406 (R;US)
Materials accounting system for an IBM PC, 11:37671 (R;US)
Mechanics of metal forming, 11:38245 (R;US)
Metal reflectors in the EUV, 11:38578 (R;US)
Mobile nondestructive assay and examination instruments, 11:37677 (R;US)
Modeling study of solute transport in the unsaturated zone. Information and data sets. Volume 1, 11:37642 (R;US)
Muon channeling in Ge: evidence for pionium formation, 11:38405 (R;US)
Muon spin relaxation and Knight shift in the heavy-fermion superconductor UPt_3, 11:38246 (R;US)
New results for rare muon decays, 11:39134 (R;US)
Nuclear materials accounting, helping the facility operator, 11:37675 (R;US)
Nuclear-like states of quark matter, 11:39262 (R;US)
Parity violation in proton-proton scattering at intermediate energies, 11:39184 (R;US)
Physical characteristics of diblock polyacetylene copolymers: processability-conductivity correlation, 11:38394 (R;US)
Physics with bottled antiprotons, 11:38683 (R;US)
Plasma synthesis and characterization of ultrafine SiC, 11:38353 (R;US)
Potentials for fuel cells in refineries and chlor-alkali plants, 11:38138 (R;US)
Projectile oscillations in augmented rail guns, 11:38552 (R;US)
Quality assurance for IAEA inspection planning, 11:37672 (R;US)
Quantized vortex filaments in incompressible fluids, 11:39113 (R;US)
Search for rare muon and pion decay modes with the crystal box detector, 11:39133 (R;US)
Sequential analysis of materials balances. Application to a prospective reprocessing facility, 11:37670 (R;US)
Simple defense conservative model for mass requirements of hypervelocity projectile impact shields for reentry vehicles, 11:38551 (R;US)
Stabilization of actinides and lanthanides in unusually high oxidation states, 11:38526 (R;US)
Status of the Los Alamos heavy ion injector, 11:38702 (R;US)
Studies of nuclear structure in antinucleon charge-exchange reactions, 11:39207 (R;US)
Techniques of absolute low energy x-ray calibration, 11:39279 (R;US)
Three-level approach to quality programs for research, development and production, 11:39436 (R;US)
Use of fiber optics for perimeter alarms, 11:38550 (R;US)
Use of storage tank holdup measurements to reduce inventory differences in an ion exchange process, 11:37676 (R;US)
Utilization of the S-cubed, entrained-flow coal gasification model (EFCG), 11:37272 (R;US)
Vacuum ultraviolet photolysis of acetylene in the 110- to 135-nm region, 11:39072 (R;US)
VUV-soft x-ray beamline for spectroscopy and calibration, 11:38703 (R;US)

Lunar and Planetary Inst., Houston, TX (USA)
Papers presented to the workshop on the geology and petrology of the apollo 15 landing site, 11:39031 (R;US)

Lund Univ. (Sweden). Dept. of Engineering Geology
Temperature log as an indicator of permeable zones and fractures in wells, 11:37811 (R;SE)

M

Madison Engineering, Reynoldsville, PA (USA)
Device to upright fallen waste canisters at the WVDP. Final report, 11:37598 (R;US)

Maine Dept. of Conservation, Augusta (USA). Maine Geological Survey
Review and oversight of the US Department of Energy Crystalline Repository Project activities in Maine. Technical progress report, April 1, 1981-December 31, 1985, 11:37601 (R;US)

Mainz Univ. (Germany, F.R.). Inst. fuer Kernchemie
Sub-Coulomb transfer in $^{238}U+^{238}U$ collisions, 11:39252 (R;DE)

Manitoba Univ., Winnipeg (Canada). Dept. of Physics
Three-particle systems at low and intermediate energies, 11:39211 (R;CA)

Marlboro Coll., VT (USA)
Progress in passive solar energy systems. Volume 8. Part 1, 11:37786 (R;US)

Martin Marietta Energy Systems, Inc., Oak Ridge, TN (USA). Y-12 Plant
Microcomputer-based instrument for the detection and analysis of precession motion in a gas centrifuge machine. Revision 1, 11:37509 (R;US)

Maryland Univ., College Park (USA)
Parity violation in proton-proton scattering at intermediate energies, 11:39184 (R;US)

Maryland Univ., College Park (USA). Dept. of Computer Science
Parallel matrix computations. Interim report, 1983-1984, 11:39440 (R;US)
Using multiple inverted trees for parallel updating of graph properties. Technical report, 11:39438 (R;US)

Maschinenfabrik Augsburg-Nuernberg (M.A.N.) A.G., Muenchen (Germany, F.R.). Bereich Neue Technologie
Hydrogen- and tritium permeation within high temperature reactor (HTR) development. Results for the alloy Hastelloy X, 11:37981 (R;DE;In German)

Mason and Hanger-Silas Mason Co., Inc., Amarillo, TX (USA)
Environmental monitoring report for Pantex Plant covering 1985, 11:37641 (R;US)

Massachusetts Inst. of Tech., Cambridge (USA)
[Myocardinal perfusion scintigraphy using a new technique, the mesh chamber]. Second year progress report, 1980, 11:38938 (R;US)

Massachusetts Inst. of Tech., Cambridge (USA). Dept. of Materials Science and Engineering
Electron diffraction analysis of the pentagonal arrangement of grains found in CVD pure Ni films, 11:38294 (R;US)

Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center
Directional asymmetries in the Alcator C edge plasma, 11:39309 (R;US)
Ion and electron parameters in the alcator C tokamak scrape-off region, 11:39310 (R;US)
Kinetic analysis of the sideband instability in a helical wiggler free laser for electrons trapped near the bottom of the ponderomotive potential, 11:38581 (R;US)

Massachusetts Univ., Amherst (USA). Dept. of Civil Engineering
Control of organic substances in water and waste water, 11:38900 (R;US)

Materials Engineering Associates, Inc., Lanham, MD (USA)
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)

Max-Planck-Institut fuer Metallforschung, Stuttgart (Germany, F.R.)
Muon channeling in Ge: evidence for pionium formation, 11:38405 (R;US)
Strain contrast in SiC whisker reinforced Al_2O_3, 11:38388 (R;US)

Max-Planck-Institut fuer Metallforschung, Stuttgart (Germany, F.R.). Inst. fuer Werkstoffwissenschaften
Strain contrast in SiC whisker reinforced Al_2O_3, 11:38388 (R;US)

Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)
Metal impurity release in diverted tokamak discharges, 11:39315 (R;US)

McDonnell Douglas Astronautics Co., St. Louis, MO (USA)
Directions for reactor target design based on the US heavy ion fusion systems assessment, 11:39362 (R;US)

Folded waveguide coupler for ion cyclotron heating, 11:39357 (R;US)
McGill Univ., Montreal, Quebec (Canada)
Observation of a new charmed meson, 11:39127 (R;DE)
Metal Properties Council, Inc., New York (USA)
Stress corrosion characterization of turbine rotor materials. Phase 2. Final report, 11:37995 (R;US)
Methane Research, Inc., Sylacauga, AL (USA)
Field evaluation of gas-lift and progressive-cavity pumps as effective dewatering methods for coalbed methane wells. Final report, April 1984-December 1985, 11:37496 (R;US)
Michigan Univ., Ann Arbor (USA)
Hydrogen line ratios in Seyfert galaxies and low redshift quasars. Final Technical Report, 1 June 1983-31 July 1984, 11:39022 (R;US)
Mine Safety and Health Administration, Arlington, VA (USA)
Field evaluation of the SIMSLIN II light-scattering instantaneous dust monitor, 11:37341 (R;US)
Laboratory and field evaluation of instantaneous reading dust instruments, 11:38740 (R;US)
Laboratory evaluation of a commercially available underground dry dust collection system, 11:37338 (R;US)
Quality assurance program for field health laboratories, 11:37387 (R;US)
Respirable dust control on longwall mining operations in the United States, 11:37339 (R;US)
Mine Safety and Health Administration, Denver, CO (USA). Health and Safety Analysis Center
Injury experience in coal mining, 1982, 11:37337 (R;US)
Injury experience in metallic mineral mining, 1982, 11:38977 (R;US)
Injury experience in nonmetallic mineral mining (except stone and coal), 1982, 11:38978 (R;US)
Injury experience in sand and gravel mining, 1982, 11:38980 (R;US)
Injury experience in stone mining, 1982, 11:38979 (R;US)
Summary of selected injury experience and worktime for the mining industry in the United States, 1931-77, 11:38976 (R;US)
Mine Safety and Health Administration, Denver, CO (USA). Safety and Health Technology Center
Injury experience in stone mining, 1983, 11:38981 (R;US)
Mine Safety and Health Administration, Pittsburgh, PA (USA). Pittsburgh Health Technology Center
MSHA's procedure for determining quartz content of respirable coal mine dust, 11:37340 (R;US)
Minimax Research Corp., Berkeley, CA (USA)
Design of load-control experiments for the Athens Automation and Control Experiment, 11:38127 (R;US)
Ministero dell'Industria, Commercio e Artigianato, Rome (Italy)
Final report on US - Italian coal logistics, 11:37353 (R;US)
Ministry of Trade and Industry, Helsinki (Finland). Energy Dept.
Constructional solutions of fuel handling equipment needed in heating plants using domestic fuel, 11:37337 (R;FI;In Finnish)
Impact of different power consumer groups on the total power supply cost, 11:38206 (R;FI;In Finnish)
Reliability and maintance costs of peat-fuel power plants, 11:37371 (R;FI;In Finnish)
Minnesota Univ., Minneapolis (USA)
Initial study of thermal energy storage in unconfined aquifers, 11:38069 (R;US)
Seismicity and tectonic relationships for Upper Great Lakes Precambrian Shield Province. Final report, July 1981-December 1982, 11:38989 (R;US)
Mississippi State Univ., Mississippi State (USA). MHD Energy Center
Differential optical absorption techniques for diagnostics of fossil fuel combustion. Technical progress report, April-June 1985, 11:37368 (R;US)
Differential optical absorption techniques for diagnostics of fossil fuel combustion. Technical progress report, July-September 1985, 11:37369 (R;US)
Mississippi Univ., University (USA)
Muon channeling in Ge: evidence for pionium formation, 11:38405 (R;US)
Mississippi Univ., University (USA). Dept. of Biology
Biodegradation and bioconversion of coals by fungi. Quarterly progress report No. 3, April 1-June 30, 1986, 11:37271 (R;US)
Mitre Corp., Bedford, MA (USA)
Expert systems for C3I. Volume 1. A user's introduction. Final report, 11:39437 (R;US)
Mobil Solar Energy Corp., Waltham, MA (USA)
Stress and efficiency studies in EFG. Quarterly progress report, October 1-December 31, 1985, 11:37734 (R;US)
Monsanto Research Corp., Miamisburg, OH (USA). Mound
Detection of NO_2 from thermally aged PETN by laser induced fluorescence, 11:38753 (R;US)
Surface characterization of an energetic material, pentaerythritoltetranitrate (PETN), having a thin coating achieved through a starved addition microencapsulation technique, 11:38516 (R;US)
Montana Dept. of Fish, Wildlife and Parks, Kalispell (USA)
Effects of water levels on productivity of Canada geese in the northern Flathead Valley. Annual report, 1985, 11:37720 (R;US)
Mount Hood National Forest, Estacada, OR (USA). Estacada Ranger District
Fisheries enhancement in the Fish Creek Basin: an evaluation of in-channel and off-channel projects, 1984. Annual report 1984, 11:38944 (R;US)
Murray State Univ., KY (USA)
Alabama Tin Belt. Metallogenesis and mineral resource evaluation. Final report for the 1983-1984 project year, 11:38985 (R;US)
Myers (Norman), Oxford (UK)
Comparison of tropical forest surveys, 11:38859 (R;US)

Some new cost-effective approaches for measuring organics associated with hazardous wastes, 11:38892 (R;US)
Standard problem exercise to validate criticality codes for large arrays of packages of fissile materials, 11:37520 (R;US)
Strain contrast in SiC whisker reinforced Al_2O_3, 11:38388 (R;US)
Thermal simulation of quenching uranium-0.75% titanium alloy in water, 11:38230 (R;US)
Total volatile organic compounds (VOC) in the indoor air of east Tennessee homes, 11:38790 (R;US)
Use of analytical electron microscopy in evaluating ferrite stability in austenitic stainless steel welds, 11:38232 (R;US)
Water quality criteria for nitrocellulose. Final report, 11:38898 (R;US)
Welding procedure specification: gas tungsten arc and shielded metal arc welding of carbon steel. Supplement 1. Records of procedure qualification tests, 11:38279 (R;US)
Welding procedure specification: gas tungsten arc dc welding of aluminum alloys 6XXX. Supplement 1. Records of procedure qualification tests, 11:38269 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel. Supplement 1. Records of procedure qualification tests, 11:38273 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel-molybdenum or nickel-molybdenum-chromium (Hastelloy B and C). Supplement 1. Records of procedure qualification tests, 11:38276 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel tonickel-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38282 (R;US)
Welding procedure specification: gas tungsten arc welding of carbon steel to chromium-nickel steel. Supplement 1. Records of procedure qualification tests, 11:38278 (R;US)
Welding procedure specification: gas tungsten arc welding of chromium-nickel steel to chromium-molybdenum steel. Supplement 1. Records of procedure qualification tests, 11:38280 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel-molybdenum-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38277 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel-copper to nickel-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38283 (R;US)
Welding procedure specification: manual gas tungsten arc and semiautomatic gas metal arc welding of carbon steel. Supplement 1. Records of procedure qualification tests, 11:38257 (R;US)
Welding procedure specification: manual gas tungsten arc and semiautomatic gas metal arc welding of chromium-nickel steel. Supplement 1. Records of procedure qualification tests, 11:38263 (R;US)
Welding procedure specification: semiautomatic gas metal arc welding of carbon stees. Supplement 1. Records of procedure qualification tests, 11:38258 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Shielded metal arc welding of carbon steel, 11:38254 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of austenitic chromium-nickel steel, 11:38266 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Semiautomatic gas metal arc welding of chromium-nickel steel, 11:38267 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc (DC) and semiautomatic gas metal arc welding of 6XXX aluminum, 11:38270 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Semiautomatic gas metal arc welding of 6XXX aluminum, 11:38271 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of copper, 11:38272 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-copper, 11:38274 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium molybdenum, 11:38275 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc and low hydrogen shielded metal arc welding of carbon steel, 11:38261 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Shielded metal arc welding of chromium-nickel steel, 11:38262 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38264 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Machine gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38265 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-chromium-iron to nickel-molybdenum-chromium-iron, 11:38284 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel, 11:38285 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-copper, 11:38286 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-chromium-iron, 11:38287 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of carbon steel, 11:38255 (R;US)

Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc and shielded metal arc welding of AISI 41XX steels, 11:38260 (R;US)

Improved catalysts for coal liquefaction. Quarterly report No. 7, March 1-May 31, 1986, 11:37268 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
  Qualifier
    Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

A

ABANDONED SHAFTS
  Heat Extraction
    Energy extraction via downhole heat exchangers in flooded abandoned mines: Applications for district heating and cooling, 11:37817 (BA;US)
ABSCISIC ACID
  Distribution
    Compartmentation and equilibration of abscisic acid in isolated Xanthium cells, 11:38926 (J;US)
ABSORBERS (SOLAR)
  See SOLAR ABSORBERS
ABSORPTION SPECTROSCOPY
  Multivariate Analysis
    Characterization of peat, a multivariate approach, 11:37289 (RA;SE)
ACCIDENTAL INTAKE
  See ACCIDENTS
ACCIDENTS
  Injuries
    Injury experience in coal mining, 1982, 11:37337 (R;US)
  Management
    Accident/incident investigation manual. Second edition, 11:38982 (R;US)
  Occupational Diseases
    Injury experience in coal mining, 1982, 11:37337 (R;US)
  Radioactivity Transport
    Material transport models for accident-induced flow in nuclear fuel cycle facilities, 11:37658 (J;US)
ACETYLENE
  Photolysis
    Lifetime and quenching measurements of C_2H emission produced by vacuum ultraviolet photolysis of C_2H_2, 11:38524 (BA;US)
    Vacuum ultraviolet photolysis of acetylene in the 110- to 135-nm region, 11:39072 (R;US)
ACID HYDROLYSIS
  Comparative Evaluations
    Comparative technical evaluation of acid hydrolysis processes for conversion of cellulose to alcohol, 11:37703 (R;US)
ACID RAIN
    Variation of precipitation composition with altitude: a feasibility study, 11:38805 (R;US)
  Computerized Simulation
    Comparison of chemical mechanisms for regional acid deposition, 11:38850 (J;US)
  Corrosive Effects
    Effect of mass transport on the determination of corrosion rates from polarization measurements, 11:38852 (BA;US)
  Data Analysis
    Spatial trend analysis and uncertainty estimates of acid precipitation data in Ontario, 11:38846 (J;US)
  Deposition
    Climatological variability, 11:38835 (J;US)
  Environmental Impacts
    Effects of acid rain, alone and in combination with gaseous pollutants, on growth and yield of crop plants, 11:38792 (R;US)
  Environmental Policy
    Two-phase framework for acid deposition science-policy decisions, 11:38087 (R;US)
  Mathematical Models
    Development of the NAPAP (National Acid Precipitation Assessment Program) emissions inventory to support applications of the Eulerian regional acid deposition model, 11:38816 (R;US)
  Research Programs
    Acid rain. Federal research into effects on waters and forests, 11:38920 (R;US)
ACQUISITION (DATA)
  See DATA ACQUISITION
ACTINIDE NUCLEI
  See also PLUTONIUM 237
  PLUTONIUM 238
  URANIUM 234
  URANIUM 238
  Alpha Decay
    International program to improve decay data for transactinium nuclides, 11:39255 (J;NL)
  Gamma Spectra
    International program to improve decay data for transactinium nuclides, 11:39255 (J;NL)
ACTINIDES
  See also AMERICIUM
  PLUTONIUM
  URANIUM
  Adsorption
    Peats and ferrites for heavy metal removal, 11:37622 (R;US)
  Stabilization
    Stabilization of actinides and lanthanides in unusually high oxidation states, 11:38526 (R;US)

ACTINIUM ISOTOPES
Nuclear Reaction Yield
Production of cold target-like fragments in the reaction of $^{48}Ca + ^{248}Cm$, 11:39254 (J;US)
ACTIVITY TRANSPORT
See RADIOACTIVITY TRANSPORT
ADAPTIVE INTRUSION DATA SYSTEMS
See INTRUSION DETECTION SYSTEMS
ADENOCARCINOMAS
See CARCINOMAS
ADSORBENTS
See also CHARCOAL
SILICA GEL
Performance Testing
Trace contaminant removal from hot coal gas for molten carbonate fuel cell application. Final report, 11:38137 (R;US)
Permeability
Engineered sorbent barrier screening studies, 11:37537 (RA;US)
AERODYNAMICS
Computerized Simulation
Inviscid/boundary layer prediction of aerodynamics for a bent-axis biconic geometry, 11:38625 (R;US)
AEROSOLS
Health Hazards
Management of risk for industrial metallic aerosols. In vitro assessment of delivered dose per unit exposure, 11:38961 (R;DK)
Mixing
Experimental study of the mixing by an acoustically pulsed axisymmetrical air-jet, 11:38670 (J;IT)
Risk Assessment
Management of risk for industrial metallic aerosols. In vitro assessment of delivered dose per unit exposure, 11:38961 (R;DK)
AIR
Radionuclide Migration
Long-term monitoring for closed sites, 11:37556 (RA;US)
Radiological characterization requirements for planning remedial action at UMTRA project sites, 11:37660 (BA;US)
Surface geophysics at the UMTRA project site in Lakeview, Oregon, 11:37633 (BA;US)
AIR CONDITIONING
Mathematical Models
HVAC control process simulation, 11:38180 (R;NO)
AIR FILTERS
Spectroscopy
Fourier transform infrared spectroscopy (FTIR) ammonium sulfate analysis on teflon air filters, 11:38678 (R;US)
AIR FLOW
Heat Transfer
Heat and mass transfer in a dissociated laminar boundary layer of air with consideration of the finite rate of chemical reaction, 11:38751 (TG;US)
Mass Transfer
Heat and mass transfer in a dissociated laminar boundary layer of air with consideration of the finite rate of chemical reaction, 11:38751 (TG;US)
AIR INFILTRATION
Calculation Methods
Influence of airtightness on air infiltration, 11:38183 (R;FI;In Finnish)
Evaluation
Evaluation of the perfluorocarbon tracer technique for determining infiltration rates in residences, 11:38834 (J;US)
Mathematical Models
Infiltration degree-days. A statistic for quantifying infiltration-related climate, 11:38157 (R;US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Environmental nitroarenes: an attempt to understand their mutagenic and carcinogenic properties, 11:38808 (R;US)
Acid Rain
Development of the NAPAP (National Acid Precipitation Assessment Program) emissions inventory to support applications of the Eulerian regional acid deposition model, 11:38816 (R;US)
Computer Codes
Guidelines for using OZIPM-3 with CBM-X or optional mechanisms. Volume 1. Description of the Ozone Isopleth plotting package, Version 3. Final report, August 1982-July 1985, 11:38810 (R;US)
Guidelines for using OZIPM-3 with CBM-X or optional mechanisms. Volume 2. Computer code. Final report, August 1982-July 1985, 11:38823 (R;US)
OZIPM-3 (Ozone Isopleth Plotting with optional mechanisms, Version 3) source code. Software, 11:38811 (R;US)
Program and data description for the environment model, 11:38801 (R;DK)
Data Analysis
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 2. Data supplement. Final report, July 1983-July 1984, 11:38807 (R;US)
Meeting atmospheric-modeling requirements for utility data, 11:38815 (R;US)
Information Needs
Review of current research and long-term research needs in air pollution, 11:38809 (R;US)
Inventories
Meeting atmospheric-modeling requirements for utility data, 11:38815 (R;US)
Mathematical Models
Diffusion Estimates Handbook (application to the Space Shuttle HCl exhaust cloud). Report for October 1985-February 1986, 11:38789 (R;US)
Measuring Methods
DFVLR measuring system for the determination of the spatial distribution of environmental parameters of the atmosphere by means of mobile instrumented platforms, 11:38840 (TG;FR)
Plumes
Investigation of the formation of a Portland Cement plant detached plume, 11:38824 (R;US)
Research Programs
Review of current research and long-term research needs in air pollution, 11:38809 (R;US)
Spatial Distribution
DFVLR measuring system for the determination of the spatial distribution of environmental parameters of the atmosphere by means of mobile instrumented platforms, 11:38840 (TG;FR)
AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Forecasting
Climatological variability, 11:38835 (J;US)
Planning
Two-phase framework for acid deposition science-policy decisions, 11:38087 (R;US)
AIR POLLUTION MONITORING
Network Analysis
Methodology for designing air-quality-monitoring networks: 2. Application to Las Vegas, Nevada, for carbon monoxide, 11:38813 (R;US)
Methodology for designing air-quality-monitoring networks. 1. Theoretical aspects, 11:38814 (R;US)
AIR POLLUTION MONITORS
Peak exposures to nitrogen dioxide and study design to detect their acute health effects, 11:38822 (R;US)
Accuracy
How good are ambient air-pollution measurements, 11:38825 (R;US)
Design
Sample design considerations for indoor-air-exposure surveys, 11:38820 (R;US)
AIR QUALITY
Data Analysis
National air-quality and emissions-trends report, 1984, 11:38821 (R;US)
Monitoring
Inventory of current environmental monitoring projects in the US-Canadian transboundary region, 11:38101 (R;US)

Standards
Analysis of inhalable and fine particulate data and evaluation of their prediction models, 11:38857 (R;US)
Surveillance
Methodology for designing air-quality-monitoring networks. 1. Theoretical aspects, 11:38814 (R;US)
AIR SOURCE HEAT PUMPS
Monitoring
Monitoring of improved air-source heat pumps. Final report, 11:38154 (R;US)
Performance Testing
Monitoring of improved air-source heat pumps. Final report, 11:38154 (R;US)
AIR TRANSPORT

ALPHA DECAY
Reviews
International program to improve decay data for transactinium nuclides, 11:39255 (J;NL)
ALPHA PARTICLES
Emitted by nuclei.
Collisions
Studies of total ionization in gases/mixtures of interest to pulsed power applications, 11:39078 (J;US)
ALPHA REACTIONS
Precompound-Nucleus Emission
Nuclear structure effects in preequilibrium reactions: α-induced reactions on /sup 24,25,26/Mg, ^{27}Al, and ^{28}Si, 11:39219 (J;US)
ALPHA-BEARING WASTES
Certification
Assay of TRU wastes containing (α,n) sources (WIPP), 11:38471 (R;US)
Nondestructive Analysis
Mobile nondestructive assay and examination instruments, 11:37677 (R;US)
Program Management
FY85 Program plan for the Defense Transuranic Waste Program (DTWP), 11:37597 (R;US)
Radioactive Waste Disposal
FY85 Program plan for the Defense Transuranic Waste Program (DTWP), 11:37597 (R;US)
Radioactive Waste Facilities
Process Experimental Pilot Plant, 11:37606 (R;US)
Radioactive Waste Processing
Process Experimental Pilot Plant, 11:37606 (R;US)
Vitrification
In situ vitrification large-scale operational acceptance test analysis, 11:37616 (R;US)
Waste Transportation
Transuranic package transporter. TRUPACT-I. Safety analysis report for packaging (SARP). Appendices to Chapter 2. Volume 2, 11:38555 (R;US)
ALTERNATE FUELS
See SYNTHETIC FUELS
ALUMINATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Adsorption
Effect of silicate and aluminate ion adsorption on the reaction of quartz and alumina with caustic solution, 11:37431 (R;US)
Physical Radiation Effects
Thermal conductivities for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ solid breeders with and without irradiation effects, 11:39405 (J;US)
Thermal Conductivity
Thermal conductivities for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ solid breeders with and without irradiation effects, 11:39405 (J;US)
ALUMINIA
See ALUMINIUM OXIDES
ALUMINIUM
Grain Boundaries
Effect of interatomic potential on the calculated energy and structure of high-angle coincident site grain boundaries. I. (100) twist boundaries in aluminum, 11:38345 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Physical Radiation Effects
Role of helium in the development of damage structure and swelling in neutron-irradiated aluminium, 11:38328 (J;GB)
Reflectivity
Relative importance of surface and volume scattering in all-dielectric mirrors, 11:38435 (J;US)
Sorptive Properties
Photoemission spectroscopy of surfaces and adsorbates, 11:38349 (J;US)
Welding
Heat measurements in inertia welding of aluminum to steel, 11:38628 (R;US)
ALUMINIUM 26 TARGET
Neutron Reactions
^{26}Al(n,p)^{26}Mg reaction: Comparison between the Hauser-Feshbach formula and the exact random-matrix result for the cross section, 11:39218 (J;US)
ALUMINIUM 27 TARGET
Alpha Reactions
Nuclear structure effects in preequilibrium reactions: α-induced reactions on /sup 24,25,26/Mg, ^{27}Al, and ^{28}Si, 11:39219 (J;US)

UDIMET 700
Boron Additions
APFIM study of antiphase and grain boundaries in Ni_3Al, 11:38231 (R;US)
Gettering
Dissociative pumping of the alkanes using nonevaporable getters, 11:38642 (J;US)
Precipitation
Atomic resolution study of precipitates in an Al-Ge alloy, 11:38248 (R;US)
Structural Chemical Analysis
Site occupations in Li_2 ordered alloys by axial electron channeling microanalysis (Ni_2AlX (X = Co, Hf, Fe)), 11:38234 (R;US)
Wear Resistance
Wear behavior of nitrogen-implanted metals, 11:38340 (J;US)
ALUMINIUM ARSENIDES
Electrical Properties
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Electron Diffraction
Quantitative analysis of streaks in reflection high-energy electron diffraction: GaAs and AlAs deposited on GaAs(001), 11:38425 (J;US)
Energy-Loss Spectroscopy
Analysis of semiconductor EELS in the low-loss regime, 11:38407 (R;US)

Optical Properties
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Physical Radiation Effects
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Radiation Hardening
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Roughness
Quantitative analysis of streaks in reflection high-energy electron diffraction: GaAs and AlAs deposited on GaAs(001), 11:38425 (J;US)

ALUMINIUM BASE ALLOYS
Annealing
Icosahedral-phase formation by solid-state interdiffusion, 11:38325 (J;US)
Cleaning
Cleaning of aluminum alloy 5083 (For welding), 11:38303 (R;US)
Crystal Structure
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
Gas Metal-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Semiautomatic gas metal arc welding of 6XXX aluminum (6061 and 60[illegible]), 11:38271 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc (DC) and semiautomatic gas metal arc welding of 6XXX aluminum (6061 and 6063), 11:38270 (R;US)
Gas Tungsten-Arc Welding
Gas tungsten arc welding of aluminum alloys 6XXX. Welding procedure specification. Supplement 1. Records of procedure qualification tests (6061 and 6063), 11:38268 (R;US)
Gas tungsten arc welding of aluminum alloys 3004, 5052, and 5x54 to 6xxx. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38281 (R;US)
Welding procedure specification: gas tungsten arc dc welding of aluminum alloys 6XXX. Supplement 1. Records of procedure qualification tests (6061 and 6063), 11:38269 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc (DC) and semiautomatic gas metal arc welding of 6XXX aluminum (6061 and 6063), 11:38270 (R;US)
Grain Size
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
Melting
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
Order-Disorder Transformations
Icosahedral-phase formation by solid-state interdiffusion, 11:38325 (J;US)
Oxidation
Diamond-machined aluminum alloy 5083 surfaces. Controlled exposure evaluation, 11:38304 (R;US)
Precipitation Hardening
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
Welding
Cleaning of aluminum alloy 5083 (For welding), 11:38303 (R;US)

ALUMINIUM IONS
Electron-Ion Collisions
Contributions of excitation autoionization to electron-impact ionization of Mg-like Al^{+}, S^{4+}, Cl^{5+}, and Ar^{6+} ions, 11:39089 (J;US)

ALUMINIUM OXIDES
Catalytic Effects
CO oxidation on Pd/Al_2O_3. Transient response and rate enhancement through forced concentration cycling, 11:38500 (J;GB)
Improved catalysts for coal liquefaction. Quarterly report No. 7, March 1-May 31, 1986, 11:37268 (R;US)
Chemical Preparation
Method for preparing PB-β''-alumina ceramic, 11:38361 (P;US)
Dissolution
Effect of silicate and aluminate ion adsorption on the reaction of quartz and alumina with caustic solution, 11:37431 (R;US)
Grain Boundaries
Grain-boundary microstructures in a commercial alumina ceramic, 11:38387 (J;US)
Ion Implantation
Recrystallization behavior of ion beam modified α-Al_2O_3, 11:38351 (R;US)
Mechanical Properties
Ion beam modification of ceramics, 11:38382 (J;US)
Physical Radiation Effects
Ion beam modification of ceramics, 11:38382 (J;US)
Recrystallization
Recrystallization behavior of ion beam modified α-Al_2O_3, 11:38351 (R;US)
Sorptive Properties
Effect of silicate and aluminate ion adsorption on the reaction of quartz and alumina with caustic solution, 11:37431 (R;US)
Strains
Strain contrast in SiC whisker reinforced Al_2O_3, 11:38388 (R;US)
Thermodynamic Properties
A parametric study of water-cooled solid breeder blanket designs, 11:39382 (J;US)

ALUMINIUM SILICATES
Chemical Reactions
Characterization of copper-ceramic interfaces, 11:38376 (J;US)

ALUMINUM
See ALUMINIUM

ALVEOLI (PULMONARY)
See LUNGS

AMERICIUM
Removal
Actinide removal from nitric acid waste streams, 11:37620 (R;US)

AMINES
See also ANILINE
CATECHOLAMINES
Denitrification
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986 (1,2,3,4 tetrahydroquinoline, 2-propylaniline, quinoline cyclohexylamine and propylbenzene), 11:37273 (R;US)
Gas Chromatography
GC/MS determination of amines, 11:37507 (BA;US)
Hydrogenation
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986 (1,2,3,4 tetrahydroquinoline, 2-propylaniline, quinoline cyclohexylamine and propylbenzene), 11:37273 (R;US)
Mass Spectroscopy
GC/MS determination of amines, 11:37507 (BA;US)
Photoacoustic Spectroscopy
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Photolysis
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Raman Spectra
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Raman Spectroscopy
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)

AMMONIA
Absorption Spectroscopy
MPI spectroscopy of NH_3: Application to rotational energy accommodation on surfaces, 11:38482 (BA;US)
Multi-Photon Processes
MPI spectroscopy of NH_3: Application to rotational energy accommodation on surfaces, 11:38482 (BA;US)
Rotational States
MPI spectroscopy of NH_3: Application to rotational energy accommodation on surfaces, 11:38482 (BA;US)
Scattering
MPI spectroscopy of NH_3: Application to rotational energy accommodation on surfaces, 11:38482 (BA;US)
AMMONIUM COMPOUNDS
See also AMMONIUM SULFATES
Excretion
Ammonium release by juveniles and adult females of the subtropical marine copepod Eucalanus pileatus, 11:38935 (J;GB)
AMMONIUM SULFATES
Spectroscopy
Fourier transform infrared spectroscopy (FTIR) ammonium sulfate analysis on teflon air filters, 11:38678 (R;US)
AMPLIFIERS
Master oscillator and diagnostic unit design. Final report, 7 May 1984-8 January 1985, 11:38572 (R;US)
ANADROMOUS FISHES
See also SALMON
Bibliographies
White sturgeon bibliography. Final report, 1985 (Acipenser transmontanus), 11:38887 (R;US)
ANAEROBIC DIGESTION
Cost Benefit Analysis
The importance of anaerobic digestion of manure for energy, environmental and resource policy, 11:37704 (R;NL;DU)
Pilot Plants
Production of biogas (methane) and utilization as an alternate energy source, 11:37699 (R;NO)
ANALYSIS (GAS)
See GAS ANALYSIS
ANDESITES
Rock Drilling
Experimental assessment of borehole wall drilling damage in basaltic rocks, 11:39004 (R;US)
ANEMOMETERS
Time-of-Flight Method
Determination of size and velocity of flue gas particulates, 11:38680 (R;DK;In Danish)
ANHYDRITE
Boreholes
Full-scale borehole sealing test in anhydrite under simulated downhole conditions. Volume 1, 11:39000 (R;US)
Permeability
Full-scale borehole sealing test in anhydrite under simulated downhole conditions. Volume 2, 11:39001 (R;US)
Recovery
Utilization of by-product from the wet-dry flue gas desulfurization method, 11:38828 (R;SE;In Swedish)
ANILINE
Anaerobic Digestion
Anaerobic SBR treatment of coal conversion wastewaters. Third quarterly report, 11:37306 (R;US)
Radiolysis
Resonance Raman studies of radiation- and photo-chemical transients, 11:38505 (BA;US)
Raman Spectroscopy
Resonance Raman studies of radiation- and photo-chemical transients, 11:38505 (BA;US)
ANIMAL SHELTERS
Energy Consumption
Energy consumption in pigsties, 11:38178 (R;DK;In Danish)
Heat Pumps
Heat pumps in animal shelters, 11:38179 (R;DK;In Danish)
ANIONS
See also HYDROGEN IONS I MINUS
Raman Spectroscopy
Resonance Raman studies of radiation- and photo-chemical transients, 11:38505 (BA;US)
ANISOLE
Solvation
Correlation of solvatochromic effects with retention in supercritical fluid chromatography, 11:38472 (R;US)
ANTENNAS
Performance Testing
Modeling antennas near to and penetrating a lossy interface, 11:38568 (J;US)
ANTIBODIES
Production
Studies on the immunochemical techniques for detection of selected fungal and dinoflagellate toxins. Annual progress report No. 2, 1 August 1982-31 July 1983, 11:38939 (R;US)
Radiosensitivity
Circulating antibody response of mice exposed to 9-GHz pulsed microwave radiation, 11:38971 (R;US)
ANTIFERROMAGNETIC MATERIALS
Ising Model
Comparative Monte Carlo and mean-field studies of random-field Ising systems, 11:39286 (J;US)
ANTIMONY ALLOYS
Epitaxy
Ordered structures in GaAs/sub 0.5/Sb/sub 0.5/ alloys grown by organometallic vapor phase epitaxy, 11:38428 (J;US)
ANTIMUONS
See MUONS PLUS
ANTINEUTRINO-NUCLEON INTERACTIONS
Deep Inelastic Scattering
Partons in nuclei, 11:39174 (J;US)
ANTIPROTON BEAMS
Beam Cooling
Physics with bottled antiprotons, 11:38683 (R;US)
ANTIPROTON REACTIONS
Charge-Exchange Reactions
Studies of nuclear structure in antinucleon charge-exchange reactions, 11:39207 (R;US)
ANTIREFLECTION COATINGS
Materials
Effective antireflection coatings of transparent polymeric materials by gas-phase surface fluorination, 11:37807 (BA;US)
Performance Testing
Technical and historical overview of the study at Lawrence Livermore National Laboratory of porous antireflection coatings, 11:38596 (BA;US)
ANTRIM SHALES
See BLACK SHALES
APARTMENT BUILDINGS
Retrofitting
Veneer wall on the existing houses, 11:38162 (R;DK;In Danish)
APPLIANCES

AQUATIC ECOSYSTEMS
See also WETLANDS
Comparative Evaluations
Biomass of freshwater turtles: a geographic comparison, 11:38889 (J;US)
Geographical Variations
Biomass of freshwater turtles: a geographic comparison, 11:38889 (J;US)

Radionuclide Kinetics
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station - 1985. Appendices. Part II, 11:38911 (R;US)
Radionuclide Migration
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station - 1985. Appendices. Part II, 11:38911 (R;US)
Species Diversity
Effects of mire drainage and peat extraction on benthic invertebrates and fish, 11:37322 (RA;SE)

AQUATIC ORGANISMS
Unspecified biota characteristic of aquatic ecosystems.
See also FISHES
Habitat
Water quality criteria for nitrocellulose. Final report, 11:38898 (R;US)

AQUIFERS
Heat Transfer
Initial study of thermal energy storage in unconfined aquifers (UCATES), 11:38069 (R;US)

ARAB REPUBLIC OF EGYPT
See EGYPTIAN ARAB REPUBLIC

ARGON
Atomic Beams
CO/sub 2/ laser sustained CW discharge atomic beam source, 11:39073 (R;US)
Electron-Ion Collisions
Studies of total ionization in gases/mixtures of interest to pulsed power applications, 11:39078 (J;US)
Electron-Molecule Collisions
Studies of total ionization in gases/mixtures of interest to pulsed power applications, 11:39078 (J;US)
Excitation
Atomic inner-shell threshold excitation with synchrotron radiation, 11:39103 (J;US)
Ignition
Methane oxidation behind reflected shock waves: ignition delay times measured by pressure and flame band emission, 11:38535 (R;US)
Ion-Atom Collisions
Resonant behavior in the projectile K x-ray yield associated with electron capture in ion-atom collisions, 11:39104 (J;US)
Ion-Molecule Collisions
Mass spectrometric and chemiluminescent studies of CS_3i in a flowing argon afterglow, 11:38487 (BA;US)
Studies of total ionization in gases/mixtures of interest to pulsed power applications, 11:39078 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Rotational States
Measurement of the nu_3 perpendicular bending mode of Ar-HCl by intracavity far infrared laser Stark spectroscopy, 11:38501 (BA;US)

ARGON IONS
Electron-Ion Collisions
Contributions of excitation autoionization to electron-impact ionization of Mg-like Al^{+}, S^{4+}, Cl^{5+}, and Ar^{6+} ions, 11:39089 (J;US)
Electron-impact ionization of Mg-like ions: S^{4+}, Cl^{5+}, and Ar^{6+}, 11:39086 (J;US)
Electron-impact ionization in the magnesium-isoelectronic sequence, 11:39087 (J;US)

ARGON OXIDES
Electron Beam Pumping
E-beam-induced fluorescence of excimers in cryogenic solutions, 11:38604 (BA;US)
Fluorescence
E-beam-induced fluorescence of excimers in cryogenic solutions, 11:38604 (BA;US)

ARGONAUT TYPE REACTORS
Reactor Licensing
UCLA research reactor relicensing, or guilty until proven innocent, 11:38010 (J;US)

ARGUS EVENT
Nuclear Explosions
Operation Argus. Sounding rocket measurements - Project Jason, 11:38773 (R;US)
Operation Argus. Surface measurements - project midas, 11:38774 (R;US)

ARID LANDS
See also DESERTS
Radioactive Waste Disposal
Status of corrective measures technology for shallow land burial at arid sites, 11:37586 (RA;US)
Radionuclide Migration
Development of technology for the design of shallow land burial facilities at arid sites, 11:37541 (RA;US)

ARKANSAS
Rift Zones
New Madrid Seismotectonic Program. Final report, 11:38991 (R;US)

ARKANSAS POWER-LIGHT-1 REACTOR

QUINONES
Chemical Reaction Kinetics
Kinetic energies released in the loss of nitrogen oxide from substituted nitroaromatic anions, 11:38518 (BA;US)
Combustion
Reaction intermediates in aromatic-fuel combustion. Final report, 18 July 1984-17 July 1985, 11:37482 (R;US)
Decomposition
Kinetic energies released in the loss of nitrogen oxide from substituted nitroaromatic anions, 11:38518 (BA;US)
Hydrogenation
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986 (1,2,3,4 tetrahydroquinoline, 2-propylaniline, quinoline cyclohexylamine and propylbenzene), 11:37273 (R;US)

ARRAY PROCESSORS
Parallel Processing
Parallel matrix computations. Interim report, 1983-1984, 11:39440 (R;US)
Partitioning and packing mathematical simulation models for calculation on parallel computers, 11:39443 (R;US)

ARSENIC
Ecological Concentration
Temporal trends of contamination of Puget Sound, 11:38902 (R;US)
Liquid Column Chromatography
Evaluation of a direct injection nebulizer interface for flow injection analysis and high performance liquid

chromatography with inductively coupled plasma-atomic emission spectroscopic detection, 11:38470 (R;US)

ARSENIC ADDITIONS
Segregation
Chemistry of hydrogen and arsenic interactions at silicon grain boundaries, 11:38441 (J;US)

ARTIFICIAL INTELLIGENCE
Expert Systems
Expert systems for C3I. Volume 1. A user's introduction. Final report, 11:39437 (R;US)
Research Programs
CESAR research in intelligent machines, 11:38545 (R;US)
Uses
Artificial intelligence applications to the surveillance and diagnostics of nuclear power plants, 11:37916 (J;US)

ASDEX TOKAMAK
Impurities
Metal impurity release in diverted tokamak discharges, 11:39315 (R;US)

ASHES
See also FLY ASH
Catalytic Effects
Characterization and catalytic activity of coal mineral matter. 2. Hydrodesulfurization of thiophene, 11:37315 (J;NL)
Chemical Analysis
Coal-gasification environmental data summary: trace elements. Final report, September 1984-December 1985, 11:37275 (R;US)
Chemical Composition
Analysis of peat and its waste products, 11:37288 (RA;SE)
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Emission Spectroscopy
Analysis of peat and its waste products, 11:37288 (RA;SE)
Multi-Element Analysis
Analysis of peat and its waste products, 11:37288 (RA;SE)
Removal
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)
Uses
Evaluation of 'bioashes' as forest fertilizers (Ashes from peat, straw, wood, chips etc.), 11:37744 (R;SE;In Swedish)
Waste Disposal
Residues from peat burning - disposal and utilization, 11:37303 (RA;SE)
Waste Product Utilization
Residues from peat burning - disposal and utilization, 11:37303 (RA;SE)

Coupled mechanical-hydrological methodology for modeling flow in jointed rock masses using laboratory data for the joint flow model, 11:39005 (R;US)
Experimental assessment of borehole wall drilling damage in basaltic rocks, 11:39004 (R;US)
Tensile Properties
Experimental assessment of borehole wall drilling damage in basaltic rocks, 11:39004 (R;US)

BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BAYARD-ALPERT GAGES
Calibration
Calibration and characterization of Bayard—Alpert gauges operating in high magnetic fields, 11:39401 (J;US)
Operation
Calibration and characterization of Bayard—Alpert gauges operating in high magnetic fields, 11:39401 (J;US)
BEAM BENDING MAGNETS
Performing (p,n), (d,n) and (n,n) measurements with a rotating magnet beam swinger, 11:38707 (J;US)
Synchronization
On the problem of magnet ramping, 11:38712 (BA;US)
BEAM DYNAMICS
Computer Calculations
Some applications of particle-in-cell codes to problems of high intensity beams, 11:38692 (R;US)
Computer Codes
PATH - A lumped-element beam-transport simulation program with space charge, 11:38696 (BA;US)
Computerized Simulation
ARCHSIM: A proton synchrotron tracking program including longitudinal space charge, 11:38697 (BA;US)
BEAM EMITTANCE
Equations
Influence of equipartitioning on the emittance of intense charged-particle beams, 11:38690 (R;US)
Measuring Methods
Longitudinal emittance measurement at the ATS, 11:38689 (R;US)
BEAM OPTICS
Electrodes
Transverse field focused system, 11:38694 (P;US)
BEAM PERVEANCE
See BEAM EMITTANCE
BEAM PROFILES
Distribution Functions
Elliptic distribution in longitudinal phase space (supplement to TM-1381, "The beam and the bucket"), 11:38688 (R;US)
BEAM WIDTHS
See BEAM PROFILES
BEAM-PLASMA SYSTEMS
Alignment
Illumination uniformity of laser-fusion pellets using induced spatial incoherence, 11:39372 (J;US)
Design
Illumination uniformity of laser-fusion pellets using induced spatial incoherence, 11:39372 (J;US)
Optical Systems
Illumination uniformity of laser-fusion pellets using induced spatial incoherence, 11:39372 (J;US)
BEDT-TTF
Superconductivity
Neutron-diffraction evidence for ordering in the high-T/sub c/ phase of β-di[bis(ethylenedithio) tetrathiafulvalene]triiodide [β-(ET)$_2$I$_3$], 11:38433 (J;US)
BENZENE
Air Pollution Control
Air pollution. EPA's strategy to control emissions of benzene and gasoline vapor, 11:37470 (R;US)
Air Pollution Monitoring
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline, 11:38214 (B;US)
Molecular Structure
Analysis of the stimulated Raman spectrum of the nu_{16}/nu_8+nu_{18} Fermi diad of benzene, 11:38519 (BA;US)
Raman Spectra
Ionization detection of stimulated Raman spectra, 11:38483 (BA;US)
Raman Spectroscopy
Analysis of the stimulated Raman spectrum of the nu_{16}/nu_8+nu_{18} Fermi diad of benzene, 11:38519 (BA;US)
Vibrational States
Analysis of the stimulated Raman spectrum of the nu_{16}/nu_8+nu_{18} Fermi diad of benzene, 11:38519 (BA;US)
BENZOPYRENE
Sorption
Effect of dissolved organic macromolecules on exposure of aquatic organisms to organic contaminants, 11:38894 (R;US)
BERKELEY BEVALAC
See BEVALAC
BERYLLIUM
Deposition
Weight change measurements of erosion/deposition at beryllium limiter tiles in the Impurity Study Experiment-B, 11:39400 (J;US)
Diffusion Welding
Use of electrodeposited silver as an aid in diffusion welding, 11:38342 (J;US)
Erosion
Weight change measurements of erosion/deposition at beryllium limiter tiles in the Impurity Study Experiment-B, 11:39400 (J;US)
Gettering
Cleanup and gettering during the Beryllium Limiter Experiment in Impurity Study Experiment-B, 11:39376 (J;US)
Materials Testing
Thermomechanical testing of beryllium for the JET/ISX-B beryllium limiter experiment, 11:39418 (BA;US)
Migration
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Solid Clusters
Ab initio calculations on large Be clusters, 11:38338 (BA;US)
Surface Coating
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
BERYLLIUM 7
Spatial Distribution
Distribution of cosmogenic ^{7}Be in salt marsh sediments, 11:38855 (J;US)
BERYLLIUM 9 TARGET
Neutron Reactions
Neutron scattering on deformed nuclei, 11:39216 (J;US)
BERYLLIUM ALLOYS
Physical Properties
Heavy fermion materials (UBe_{13}), 11:38247 (R;US)
BERYLLIUM MODERATORS
See BERYLLIUM
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA DECAY
For neutron and nuclear decay.
Coupling Constants
Correlation coefficients in polarized neutron decay: experiments with PERKEO, 11:39143 (RA;US)
Polarized Products
Comparison of beta-ray polarizations in Fermi and Gamow-Teller transitions and SU(2)/sub L/ x SU(2)/sub R/ x U(1) models, 11:39132 (R;US)
T Invariance
Time reversal invariance in polarized neutron beta decay, 11:39144 (RA;US)
BETA DETECTION
Survey Monitors
Field tests of a portable tissue equivalent survey meter for monitoring mixed beta/gamma radiation fields, 11:38722 (R;US)
Tissue-Equivalent Detectors
Field tests of a portable tissue equivalent survey meter for monitoring mixed beta/gamma radiation fields, 11:38722 (R;US)
BETA SPECTROSCOPY
Factors involved in the interpretation of beta spectra, 11:38724 (R;US)

BEVALAC
Operation
Present status of the Bevalac and design outline of proposed medical accelerator, 11:38684 (R;US)
BINARY MIXTURES
Heat Transfer
Free convection heat transfer in the critical region of binary fluid mixtures, 11:38622 (R;US)
BIOCENOSES
See ECOSYSTEMS
BIOFOULING
See BIOLOGICAL FOULING
BIOGAS
See METHANE
BIOGEOCENOSES
See ECOSYSTEMS
BIOLOGICAL FOULING
Control
Study of microbiologically influenced corrosion in nuclear power plants and a practical guide for countermeasures. Final report, 11:37994 (R;US)
BIOLOGICAL RADIATION EFFECTS
See also RADIATION INJURIES
Hyperthermia
Pathological changes in the rabbit lungs after irradiation and after combined irradiation and hyperthermia, 11:38948 (R;DE;In German)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOLOGICAL WARFARE
Factors limiting endurance of armor, artillery, and infantry units under simulated NBC conditions, 11:39432 (R;US)
BIOMASS
Sampling for analysis of biofuels, 11:37715 (R;SE;In Swedish)
Drying
Dryers for wood fuels: design and evaluation. Special report, 11:37711 (R;US)
Energy Source Development
Analysis of agronomical constraints in connection with the utilisation of straw as an energy source. Final report, 11:37709 (R;DE;In French)
Gasification
Catalysts for biomass gasification, 11:37755 (BA;US)
Understanding, operating, and testing fixed bed gasifiers, 11:37762 (BA;GB)
Liquefaction
Direct conversion of biomass to liquids by thermal processes, 11:37753 (BA;US)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Design
Pilot plant for extraction of biogas. Technical description, 11:37698 (R;NO;In Norwegian)
Feasibility Studies
Charcoal and heat produced by straw and wood combustion. Possibilities, methods and economy, 11:37710 (R;DK;In Danish)
BIOMASS PLANTATIONS
Cultivation
Weed control in energy forest production, 11:37742 (R;SE;In Swedish)
Economic Analysis
An economic evaluation of the competitiveness of Short-Rotation Intensive Culture for energy, 11:37756 (BA;US)
Economic analysis of energy forestry, 11:37743 (R;SE;In Swedish)
Fertilizers
Evaluation of 'bioashes' as forest fertilizers (Ashes from peat, straw, wood, chips etc.), 11:37744 (R;SE;In Swedish)
Short Rotation Cultivation
An economic evaluation of the competitiveness of Short-Rotation Intensive Culture for energy, 11:37756 (BA;US)
BIOPHYSICS
Research Programs
Report of activities 1947-1985, 11:38946 (R;US)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Design
Production of chemicals from food processing wastes using a novel fermenter separator. Technical progress report, January 1-March 31, 1986, 11:37705 (R;US)
Performance Testing
Production of chemicals from food processing wastes using a novel fermenter separator. Technical progress report, January 1-March 31, 1986, 11:37705 (R;US)
BIRDS
Mortality
Computational model for the assessment of oil spill damages, 11:37475 (R;NO)
Oil Spills
Computational model for the assessment of oil spill damages, 11:37475 (R;NO)
BIS(ETHYLENEDITHIOLO)TETRATHIAFULVALENE
See BEDT-TTF
BISMUTH
Nuclear Quadrupole Resonance
Spectroscopy and measurement of electromagnetic moments in sup(198,200,210)Po, 11:39247 (R;DE)
BISMUTH 209 TARGET
Neutron Reactions
(n,p) reaction at zero degrees from ^{12}C, ^{13}C, ^{90}Zr, and ^{209}Bi at 65 MeV, 11:39215 (J;US)
Phenomenological mapping of the Fermi-surface anomaly with neutron-nucleus collisions, 11:39251 (J;US)
Nitrogen 15 Reactions
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
Oxygen 16 Reactions
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
BITUMINOUS COAL
Biodegradation
Biodegradation and bioconversion of coals by fungi. Quarterly progress report No. 3, April 1-June 30, 1986, 11:37271 (R;US)
BLACK SHALES
Gas Yields
Technically recoverable Devonian Shale gas in Ohio, West Virginia, and Kentucky, 11:37469 (BA;US)
Resource Assessment
Technically recoverable Devonian Shale gas in Ohio, West Virginia, and Kentucky, 11:37469 (BA;US)
BLACKBODY RADIATION
Temperature Measurement
Surface thermography, 11:39404 (J;US)
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLASTING
See EXPLOSIVE FRACTURING
BLASTS
See EXPLOSIONS
BLOWERS
Performance
Main fans for wood-gas systems: evaluation and design. Special report, 11:37701 (R;US)
BOGS
See SWAMPS
BOILER FUEL
See BOILER FUELS
BOILER FUELS
Combustion Products
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 1. Technical results. Final report, July 1983-July 1984, 11:38806 (R;US)

Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 2. Data supplement. Final report, July 1983-July 1984, 11:38807 (R;US)
Comparative Evaluations
Economic comparison of coal and wood for industrial steam generation, 11:37379 (BA;US)
BOILERS
See also REFUSE-FUELED BOILERS
Boiler Fuels
Optimization of load and fuel allocation at a multi-fuel boiler plant, 11:38202 (R;FI;In Finnish)
Cocombustion
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 1. Technical results. Final report, July 1983-July 1984, 11:38806 (R;US)
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 2. Data supplement. Final report, July 1983-July 1984, 11:38807 (R;US)
Corrosion Protection
Operation experiences with polyamine dosing to condition feed water, boiler water and condensate, 11:38904 (R;SE;In Swedish)
Emission
Economic comparison of coal and wood for industrial steam generation, 11:37379 (BA;US)
Fouling
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)
Low-rank coal program. Technology status report, 11:37260 (R;US)
Load Management
Optimization of load and fuel allocation at a multi-fuel boiler plant, 11:38202 (R;FI;In Finnish)
Optimization
Optimization of load and fuel allocation at a multi-fuel boiler plant, 11:38202 (R;FI;In Finnish)
Pollution Regulations
Economic comparison of coal and wood for industrial steam generation, 11:37379 (BA;US)
Testing
Corrosion of grate tubes in wood-fired hot-water boilers. Field tests at Vilhelmina Vaermeverk 1983-1984, 11:37716 (R;SE;In Swedish)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLOMETERS
Design
Physics and design of advanced IR bolometers and photoconductors, 11:38748 (J;GB)
BONNEVILLE POWER ADMINISTRATION
Environmental Impact Statements
Direct service industry options. Final enrivonmental impact statement, 11:38922 (R;US)
Load Analysis
Overview of ELCAP, 11:38115 (RA;US)
Research Programs
Development of the BPA substation soil PCB testing program, 11:38863 (RA;US)
BOREHOLES
Closures
Full-scale borehole sealing test in anhydrite under simulated downhole conditions. Volume 1, 11:39000 (R;US)
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 1, 11:38998 (R;US)
Two-dimensional axisymmetric and plane strain scoping calculations for the Small-Scale Seal Performance Test, Test Series A, 11:37628 (R;US)
Electric Logging
Electrode configuration influence on resistivity measurements about a spherical anomaly, 11:38997 (J;US)
Grouting
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 1, 11:38998 (R;US)
Temperature Logging
Temperature log as an indicator of permeable zones and fractures in wells, 11:37811 (R;SE)
BORIC ACID
Biological Effects
Effect of ionic interaction of chlorode-borate and iodide-borate on their absorption by Lemna minor L., 11:38970 (J;FR;FR)
BORON
Crystal Structure
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Lattice Parameters
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Microanalysis
Microanalytical techniques for boron analysis using the 10B(n,alpha)7Li reaction, 11:38479 (J;US)
Oscillation Modes
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
Raman Spectra
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
BORON 8
Beta-Plus Decay
Solar neutrinos from the decay of ^{8}B, 11:39047 (J;US)
BORON ARSENIDES
Crystal Structure
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Lattice Parameters
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Oscillation Modes
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
Raman Spectra
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
BORON CARBIDES
Auger Electron Spectroscopy
Auger electron spectroscopy studies of boron carbide, 11:38365 (J;US)
Chemical Vapor Deposition
Chemical vapor deposition of boron-based refractory solids, 11:38362 (J;US)
Crystal Growth
Chemical vapor deposition of boron-based refractory solids, 11:38362 (J;US)
Crystal Structure
Auger electron spectroscopy studies of boron carbide, 11:38365 (J;US)
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Electron Spin Resonance
Electron spin resonance study of hot-pressed boron carbide, 11:38370 (J;US)
Electronic Structure
Auger electron spectroscopy studies of boron carbide, 11:38365 (J;US)
Electronic transport in boron carbides, 11:38366 (J;US)
Lattice Parameters
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Magnetic Susceptibility
Magnetic susceptibility of boron carbides, 11:38369 (J;US)
Microstructure
High resolution imaging of boron carbide microstructures, 11:38364 (J;US)
Morphology
Chemical vapor deposition of boron-based refractory solids, 11:38362 (J;US)
Oscillation Modes
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
Polarons
Electron spin resonance study of hot-pressed boron carbide, 11:38370 (J;US)
Magnetic susceptibility of boron carbides, 11:38369 (J;US)

Polaron formation in systems of boron icosahedra, 11:38367 (J;US)
Raman Spectra
Raman spectroscopy of carboranes and polycarboranesiloxanes, 11:38492 (R;US)
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
Structural Models
Electronic transport in boron carbides, 11:38366 (J;US)
Transmission Electron Microscopy
High resolution imaging of boron carbide microstructures, 11:38364 (J;US)
Transport Theory
Electronic transport in boron carbides, 11:38366 (J;US)
Polaron formation in systems of boron icosahedra, 11:38367 (J;US)
BORON NITRIDES
Energy-Loss Spectroscopy
Microanalysis by electron energy loss spectroscopy at 300kV, 11:38352 (R;US)
BORON PHOSPHIDES
Crystal Structure
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Electronic Structure
Electronic structure of boron-rich borides, 11:38368 (J;US)
Lattice Parameters
Rhombohedral crystal structure of compounds containing boron-rich icosahedra, 11:38363 (J;US)
Oscillation Modes
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
Raman Spectra
Raman spectroscopy of boron carbides and related boron-containing materials, 11:38447 (J;US)
BOROSILICATE GLASS
Fracture Properties
Fracture toughness in nuclear waste glasses and ceramics: environmental and radiation effects, 11:38356 (R;US)
Radiation Effects
Fracture toughness in nuclear waste glasses and ceramics: environmental and radiation effects, 11:38356 (R;US)
BOROSILICATES
See BOROSILICATE GLASS
BOSON EXPANSION
SP Groups
Closed, analytic, boson realizations for Sp(4), 11:39290 (J;US)
BOSONIZATION
See BOSON EXPANSION

Containment Systems
Estimated safety significance of Generic Safety Issue 61, 11:38025 (R;US)

Deaerators
Deaeration of makeup water for LWRs, 11:37857 (R;US)

Design
Application of design margins for BWR power update, 11:37867 (J;US)

ECCS
Process inherent, ultimately safe BWR, 11:38043 (J;US)
Small inherently safe reactor with a passive ECCS, 11:38042 (J;US)

Fuel Assemblies
MICBURN-CASMO analysis of fuel with advanced gadolinia design, 11:37886 (J;US)

Fuel Elements
Gadolinia fuel performance in BWRs, 11:37885 (J;US)

Fuel Rods
BWR fuel rod performance evaluation program. Final report, 11:37858 (R;US)

In Core Instruments
Heterogeneity effects on the detector field of view in the radial direction in BWRs, 11:37883 (J;US)

Loose Parts Monitoring
Development of a loose parts detection and diagnostic system, 11:37876 (J;US)

Modifications
Implementing a QA program for plant modifications, 11:37862 (J;US)

Nondestructive Testing
EPRI nondestructive evaluation center: technology transfer to improve reliability, 11:37863 (J;US)

Nuclear Engineering
Relocation of resources from the general office to the Palisades site, 11:37865 (J;US)

Performance
Achievements in nuclear energy in the Federal Republic of Germany, 11:37872 (J;US)

Pipes
SAFT-UT field experience, 11:37893 (BA;US)

Power Generation
Application of design margins for BWR power update, 11:37867 (J;US)

Quality Assurance
Implementing a QA program for plant modifications, 11:37862 (J;US)

Radiation Protection
ALARA and maintenance productivity improvements through effective BWR undervessel shielding, 11:38049 (J;US)

Reactor Cooling Systems
Estimated safety significance of Generic Safety Issue 61, 11:38025 (R;US)

Reactor Core Disruption
Changes in iodine volatility resulting from gamma irradiation of aqueous iodine solutions, 11:38050 (J;US)
Time dependence of the iodine partition coefficient in an unirradiated system, 11:38051 (J;US)

Reactor Cores
Heterogeneity effects on the detector field of view in the radial direction in BWRs, 11:37883 (J;US)

Reactor Instrumentation
Use of PRA in assessing BWR vessel level instrumentation, 11:38027 (J;US)

Reactor Kinetics
Improved point-kinetics model for the BWR control rod drop accident, 11:38060 (J;US)
Multidimensional nodal analysis of boiling water reactor stability, 11:37881 (J;US)
Nonlinear dynamics and stability of boiling water reactors: qualitative and quantitative analyses, 11:37882 (J;US)
QPANDA: an advanced nodal method for LWR analyses, 11:37880 (J;US)

Reactor Licensing
Application of design margins for BWR power update, 11:37867 (J;US)
Identification of regulatory requirements that have marginal importance to risk, 11:38039 (J;US)

Reactor Maintenance
ALARA and maintenance productivity improvements through effective BWR undervessel shielding, 11:38049 (J;US)

Reactor Materials
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)

Reactor Operation
Reactor Analysis Support Package (RASP). Volume 2. BWR event analysis guidelines. Final report, 11:38021 (R;US)
Search for excellence: a progress report from the Tokyo Electric Power Company, 11:37976 (J;US)

Reactor Safety
Identification of regulatory requirements that have marginal importance to risk, 11:38039 (J;US)
Process inherent, ultimately safe BWR, 11:38043 (J;US)
Reactor Analysis Support Package (RASP). Volume 2. BWR event analysis guidelines. Final report, 11:38021 (R;US)
Small inherently safe reactor with a passive ECCS, 11:38042 (J;US)

Reactor Shutdown
BWR plant outage experience, 11:37868 (J;US)

Reactor Stability
Multidimensional nodal analysis of boiling water reactor stability, 11:37881 (J;US)
Nonlinear dynamics and stability of boiling water reactors: qualitative and quantitative analyses, 11:37882 (J;US)

Reliability
EPRI nondestructive evaluation center: technology transfer to improve reliability, 11:37863 (J;US)

Risk Assessment
PRA-based plant system reviews, 11:38029 (J;US)
Use of PRA in assessing BWR vessel level instrumentation, 11:38027 (J;US)

Rod Drop Accidents
Improved point-kinetics model for the BWR control rod drop accident, 11:38060 (J;US)

Safety Engineering
Small inherently safe reactor without an ECCS, 11:38041 (J;US)

Scram
Reducing the frequency of scrams in US nuclear power plants, 11:37875 (J;US)

Service Life
Managing BWR plant life extension, 11:37869 (J;US)

BY-PRODUCTS

Carcinogen Screening
Biomedical implications of altered product composition in advanced coal liquefaction processes, 11:37278 (J;NL)

Processing
Utilization of by-product from the wet-dry flue gas desulfurization method, 11:38828 (R;SE;In Swedish)

C

C CODES
Analysis of the environmental need for NO/sub x/ controls on light duty trucks and heavy duty vehicles, 11:38851 (J;US)
Preliminary examination of the impacts of repository site characterization activities and facility construction and operation activities on Hanford air quality, 11:37613 (R;US)

Manuals
Technical documentation and user's guide for City-County Allocation Model (CCAM). Version 1.0, 11:37618 (R;US)

CACTACEAE
See CACTI
CACTI
Biological Adaptation
Concomitant changes in high temperature tolerance and heat-shock proteins in desert succulents (Agave deserti, Carnegiea gigantea, Ferocactus acanthodes), 11:38955 (J;US)
CADMIUM
Photoemission
Resonance and threshold effects in photoemission up to 3500 eV, 11:39110 (J;US)
Quantitative Chemical Analysis
Trace element analysis of the heavy metals lead, cadmium and thallium in water and samples of organic matter using mass spectroscopy and isotope dilution analysis, 11:38897 (R;DE;In German)
CADMIUM SULFIDE SOLAR CELLS
Cost
Characterization of CdZnS/$CuInSe_2$ thin-film solar cells, 11:37761 (BA;US)
Efficiency
Characterization of CdZnS/$CuInSe_2$ thin-film solar cells, 11:37761 (BA;US)
Fabrication
Optimization of p-$CuInSe_2$n-CdZnS solar cells. Final subcontract report, 15 April 1984-30 September 1985, 11:37739 (R;US)
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)
Heterojunctions
Optimization of p-$CuInSe_2$n-CdZnS solar cells. Final subcontract report, 15 April 1984-30 September 1985, 11:37739 (R;US)
CADMIUM SULFIDES
Chemical Composition
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)
Electron Microprobe Analysis
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)
Electron Microscopy
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)
CADMIUM TELLURIDE SOLAR CELLS
Fabrication
Cadmium telluride (CdTe) solar cells, 11:37758 (BA;US)
Performance
Cadmium telluride (CdTe) solar cells, 11:37758 (BA;US)
CADMIUM TELLURIDES
Crystal Defects
Study of the defect structures in CdTe crystals using synchrotron x-ray topography, 11:38422 (J;US)
Electrical Properties
Cadmium telluride (CdTe) solar cells, 11:37758 (BA;US)
Microstructure
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Molecular Beam Epitaxy
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Superlattices
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Topography
Study of the defect structures in CdTe crystals using synchrotron x-ray topography, 11:38422 (J;US)
CAFETERIAS
See RESTAURANTS
CALCIUM
Atoms
Steady-state approach to excitation mechanisms in the ICP (inductively-coupled plasma). Technical report, 11:39112 (R;US)
Membrane Transport
Calcium transport in tonoplast and endoplasmic reticulum vesicles isolated from cultured carrot cells (Daucus carota Danvers), 11:38932 (J;US)
CALCIUM 40 TARGET
Electron Reactions
Deep inelastic separated response functions from ^{40}Ca and ^{48}Ca, 11:39227 (J;US)
Neutron Reactions
Energy dependence of the local optical potential for neutron-nucleus scattering, 11:39221 (J;US)
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
Optical models from low-energy s-, p- and d-wave cross sections, 11:39224 (J;US)
Proton Reactions
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
Polarization transfer and the spin-parity composition of the charge-exchange continuum, 11:39228 (J;US)
CALCIUM 48
Beta-Minus Decay
Half-life limit for $^{48}Ca(2\beta^-)^{48}Ti(0_2^+,2997)$, 11:39226 (J;US)
CALCIUM 48 REACTIONS
Fragmentation
Production of cold target-like fragments in the reaction of $^{48}Ca+^{248}Cm$, 11:39254 (J;US)
CALCIUM 48 TARGET
Electron Reactions
Deep inelastic separated response functions from ^{40}Ca and ^{48}Ca, 11:39227 (J;US)
Neutron Reactions
d/sub 5/2/-single particle strength in $^{48}Ca+n$, 11:39233 (J;US)
Optical models from low-energy s-, p- and d-wave cross sections, 11:39224 (J;US)
Proton Reactions
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
Polarization transfer and the spin-parity composition of the charge-exchange continuum, 11:39228 (J;US)
CALCIUM 51
Energy Levels
Nuclear data sheets for A = 51, 11:39230 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 51, 11:39230 (J;US)
CALCIUM CHLORIDES
Crystal Structure
Calcium and strontium dichloride hexahydrates by neutron diffraction, 11:38499 (J;DK)
CALCIUM FLUORIDES
Optical Properties
Study of possible solarization - related impurities in CaF_2 and other fluorides, 11:38450 (BA;US)
Quantitative Chemical Analysis
Study of possible solarization - related impurities in CaF_2 and other fluorides, 11:38450 (BA;US)
Spectrophotometry
Study of possible solarization - related impurities in CaF_2 and other fluorides, 11:38450 (BA;US)
CALCULATION METHODS
Comparative Evaluations
Quasi-analytic point reactor kinetics calculations using individual precursor data, 11:37991 (J;US)
CALCULATIONS (COMPUTER)
See COMPUTER CALCULATIONS
CALORIMETERS
Design
Characterization of the Tokamak Fusion Test Reactor plasma edge by Langmuir—calorimeter probes, 11:39327 (J;US)
CALVERT CLIFFS-1 REACTOR
Lusby, Maryland, USA
Primary Coolant Circuits
Safety impact of mechanical- and maintenance-induced seal failures of reactor coolant pumps, 11:38026 (J;US)
Reactor Safety
Safety impact of mechanical- and maintenance-induced seal failures of reactor coolant pumps, 11:38026 (J;US)

CARBORANES
Raman Spectra
Raman spectroscopy of carboranes and polycarboranesiloxanes, 11:38492 (R;US)

CARBOXYLASE
Tissue Distribution
Appearance and accumulation of C_4 carbon pathway enzymes in developing wheat leaves, 11:38924 (J;US)

CARBOXYLIC ACIDS
Derivatization
Determination of alcohols, phenols, and carboxylic acids using phosphorus-31 NMR spectroscopy, 11:37297 (J;US)
Nuclear Magnetic Resonance
Determination of alcohols, phenols, and carboxylic acids using phosphorus-31 NMR spectroscopy, 11:37297 (J;US)

CARCINOGENS
Health Hazards
Carcinogenic and mutagenic compounds from energy generation - health effects, 11:38960 (R;NO)

CARCINOMAS
Diagnostic Techniques
Uranium miner lung cancer study. Final report, 11:37647 (R;US)
Radioinduction
Uranium miner lung cancer study. Final report, 11:37647 (R;US)

CARIBOU
See DEER

CARROTS
Endoplasmic Reticulum
Calcium transport in tonoplast and endoplasmic reticulum vesicles isolated from cultured carrot cells (Daucus carota Danvers), 11:38932 (J;US)

CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY

CASCADE SOLAR CELLS
Research Programs
AlGaAs-GaAs patterned Ge tunnel junction cascade concentrator solar cell. Annual subcontract report, 15 October 1984-14 October 1985, 11:37740 (R;US)

CASKS
See also SPENT FUEL CASKS
Impact Tests
DOE/PNC joint program on transportation technology, 11:37523 (R;US)

CASTLE PROJECT
Fallout
Worldwide fallout from Operation Castle, 11:38765 (R;US)
Nuclear Explosions
Operation Castle. Project 7.1. Electromagnetic radiation calibration, Pacific {roving ground. Report for March-May 1954, 11:38775 (R;US)
Operation Castle. Operation Plan Number 1-53. Task Group 7.1, 11:38776 (R;US)

CATALYSIS
Electron Spectroscopy
Electron spectroscopy in fundamental catalytic studies, 11:38295 (R;US)

CATALYSTS
See also ELECTROCATALYSTS
Chemical Preparation
Study of some transition metal complexes as process catalysts. Quarterly report, March 1-May 31, 1986, 11:37267 (R;US)

Computerized Simulation
Computer simulated images of platinum clusters in Y zeolite, 11:38408 (R;US)
Deactivation
Catalysts for biomass gasification, 11:37755 (BA;US)
Direct coal liquefaction using iron-titanium hydride as a hydrogen distribution and catalytic material. Final report, 11:37269 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 7, March 1-May 31, 1986, 11:37268 (R;US)
Images
Computer simulated images of platinum clusters in Y zeolite, 11:38408 (R;US)
Impregnation
Coal liquefaction by molybdenum catalyzed hydrogenation in the absence of solvent, 11:37296 (J;NL)
Performance
Hydroprocessing of nondeashed coal-derived residuum: evaluation of catalyst performance, 11:37279 (J;NL)
Performance Testing
Improved catalysts for coal liquefaction. Quarterly report No. 7, March 1-May 31, 1986, 11:37268 (R;US)
Study of some transition metal complexes as process catalysts. Quarterly report, March 1-May 31, 1986, 11:37267 (R;US)

CATALYTIC CONVERTERS
Efficiency
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline, 11:38214 (B;US)
Performance
Environmental assessment of a reciprocating engine retrofitted with selective catalytic reduction. Volume 1. Technical results. Final report, March-December 1984, 11:38224 (R;US)
Environmental assessment of a reciprocating engine retrofitted with selective catalytic reduction. Volume 2. Data supplement. Final report, March-December 1984, 11:38225 (R;US)
Performance Testing
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline, 11:38214 (B;US)

CATECHOLAMINES
Anaerobic Digestion
Anaerobic SBR treatment of coal conversion wastewaters. Third quarterly report, 11:37306 (R;US)

CATHODES
See also HOLLOW CATHODES
PHOTOCATHODES
Materials Testing
Reduced variation in the neutron output of the dense plasma focus, 11:39411 (BA;US)

CATION EXCHANGE CAPACITY
See CATIONS

CATIONS
See also HYDROGEN IONS 1 PLUS
Magnetic Resonance
Measurement of the rotational spectrum of H_3O^+ by laser magnetic resonance (LMR) spectroscopy, 11:38503 (BA;US)
Raman Spectroscopy
Resonance Raman studies of radiation- and photo-chemical transients, 11:38505 (BA;US)

CAUSTIC FLOODING
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Chemistry
Effect of silicate and aluminate ion adsorption on the reaction of quartz and alumina with caustic solution, 11:37431 (R;US)
Field Tests
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)

CAVITIES
See also BOREHOLES
SALT CAVERNS
Compressible Flow
Prediction of flow rates through an orifice at pressures corresponding to the transition between molecular and isentropic flow, 11:39121 (J;US)

CAVITY RECEIVERS
Flow Models
Gas-particle flow within a high temperature solar cavity receiver including radiation heat transfer, 11:37775 (BA;US)
Radiant Heat Transfer
Gas-particle flow within a high temperature solar cavity receiver including radiation heat transfer, 11:37775 (BA;US)
Thermal Efficiency
Gas-particle flow within a high temperature solar cavity receiver including radiation heat transfer, 11:37775 (BA;US)

CAVITY RESONATORS
Light-weight hydrogen maser. Final report, March 1979-July 1984, 11:38577 (R;US)
Apertures
New electromagnetic effects associated with cavity-backed apertures, 11:38560 (R;US)

CE STANDARD REACTOR
Prior to 1975, PWR/80 Type Reactors was used.
Reactor Protection Systems
Setpoint relaxation for scram reduction on C-E PWRs, 11:38055 (J;US)
Reactor Safety
Setpoint relaxation for scram reduction on C-E PWRs, 11:38055 (J;US)
Scram
Setpoint relaxation for scram reduction on C-E PWRs, 11:38055 (J;US)

CELL GROWTH (PLANT)
See PLANT CELLS

CELL WALL
Hydraulic Conductivity
Cell wall yield properties of growing tissue: evaluation by in vivo stress relaxation (Pisum sativus L.), 11:38934 (J;US)

CELLS (BACTERIAL)
See BACTERIA

CELLS (ELECTROLYTIC)
See ELECTROLYTIC CELLS

CELLS (PLANT)
See PLANT CELLS

CELLS (REACTOR)
See REACTOR CELLS

CELLULOSE
Acid Hydrolysis
Comparative technical evaluation of acid hydrolysis processes for conversion of cellulose to alcohol, 11:37703 (R;US)

CEMENT INDUSTRY
Industrial Plants
Investigation of the formation of a Portland Cement plant detached plume, 11:38824 (R;US)

CEMENTS
Evaluation
Testing and evaluation of polyethylene and sulfur cement waste forms, 11:37546 (RA;US)
Fracture Properties
Very high strength cement-based materials, 11:38453 (B;US)
Leaching
Determining leach rates of monolithic waste forms, 11:38402 (R;US)
Meetings
Very high strength cement-based materials, 11:38453 (B;US)
Microstructure
Very high strength cement-based materials, 11:38453 (B;US)
Performance Testing
Testing and evaluation of polyethylene and sulfur cement waste forms, 11:37546 (RA;US)
Porosity
Very high strength cement-based materials, 11:38453 (B;US)
Radiolysis
Radiolytic gas generation from cement-based waste hosts for DOE low-level radioactive wastes, 11:38401 (R;US)
Uses
Very high strength cement-based materials, 11:38453 (B;US)

CENTRAL RECEIVERS
Air Curtains
Aerowindows for central solar receivers, 11:37777 (BA;US)
Chemical Reactors
High-pressure catalytic metal reactor in a simulated solar central receiver. Addendum, 11:37738 (R;US)
Heat Losses
Aerowindows for central solar receivers, 11:37777 (BA;US)
Heat Transfer
Momentum and energy exchange in a solid particle solar central receiver, 11:37774 (BA;US)
CENTRIFUGE ENRICHMENT PLANTS
Seals
Long-term evaluation of fluoroelastomer O-rings in UF_6, 11:37510 (J;US)
CERAMIC MELTERS
Nuclear waste treatment program. Annual report for FY 1985, 11:37614 (R;US)
CERAMICS
Brittleness
Brittleness dependence of crack branching in ceramics, 11:38371 (J;US)
Chemical Preparation
Glass ceramic toughened with tetragonal zirconia, 11:38358 (P;US)
Method for preparing PB-β''-alumina ceramic, 11:38361 (P;US)
Crack Propagation
Brittleness dependence of crack branching in ceramics, 11:38371 (J;US)
Electro-Optical Effects
Applications of photoferroelectric properties of electrooptic ceramics, 11:38449 (BA;US)
Fabrication
Mechanical prethinning and thinning of unique materials for TEM, 11:38377 (J;US)
Fracture Properties
Fracture toughness in nuclear waste glasses and ceramics: environmental and radiation effects ($Ca_2Nd_8(SiO_4)_6O_2$, $Gd_2Ti_2O_7$, and $CaZrTi_2O_7$), 11:38356 (R;US)
Transformation toughened ceramics for the heavy duty diesel engine technology program, phase 2. Final Report, August 1984-July 1985, 11:38355 (R;US)
Radiation Effects
Fracture toughness in nuclear waste glasses and ceramics: environmental and radiation effects ($Ca_2Nd_8(SiO_4)_6O_2$, $Gd_2Ti_2O_7$, and $CaZrTi_2O_7$), 11:38356 (R;US)
Thermodynamic Properties
Selective radiative cooling with MGO and/or LIF layers, 11:38359 (P;US)
CESIUM
Absorption
Method for removing cesium from a nuclear reactor coolant, 11:37938 (P;US)
CESIUM 134
Radioecological Concentration
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station - 1985. Appendices. Part II, 11:38911 (R;US)
Environmental radiological studies downstream from Rancho Seco Nuclear Power Generating Station, 11:38909 (R;US)
CESIUM 137
Leaching
Leaching studies of low-level radioactive waste forms, 11:37551 (RA;US)
Radioecological Concentration
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station - 1985. Appendices. Part II, 11:38911 (R;US)
Environmental radiological studies downstream from Rancho Seco Nuclear Power Generating Station, 11:38909 (R;US)
Evaluation and performance of the special wasteform lysimeters at a humid site, 11:37549 (RA;US)
CESIUM IODIDES
Chemical Reactions
Chemical aspects of cesium iodide interaction in steam with 304 stainless steel and Inconel-600, 11:38253 (R;US)
CESIUM IONS
Collisions
Sputtering of negative hydrogen ions by cesium bombardment, 11:39079 (J;US)
CESIUM ISOTOPES
See also CESIUM 134
CESIUM 137
Leaching
Field studies and modeling of chemical processes in the unsaturated zone, 11:37559 (RA;US)
Screening
Engineered sorbent barrier screening studies, 11:37537 (RA;US)
CHALKS
See LIMESTONE
CHARCOAL
Evaluation
Charcoal and heat produced by straw and wood combustion. Possibilities, methods and economy, 11:37710 (R;DK;In Danish)
Production
Charcoal and heat produced by straw and wood combustion. Possibilities, methods and economy, 11:37710 (R;DK;In Danish)
CHARGE DISTRIBUTION
Elliptical Configuration
Scalar potential for charge distributions with ellipsoidal symmetry, 11:39289 (R;US)
CHARGING (REACTOR)
See REACTOR FUELING
CHARMED MESON RESONANCES
Hadronic Particle Decay
Observation of a new charmed meson, 11:39127 (R;DE)
Rest Mass
Observation of a new charmed meson, 11:39127 (R;DE)
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHARS
Combustion
Single-particle combustion of Beulah lignite char, 11:37367 (R;US)
Combustion Kinetics
Single-particle combustion of Beulah lignite char, 11:37367 (R;US)
Consumption Rates
Char consumption in the underground gasification of Eastern bituminous coal, 11:37277 (R;US)
CHEMICAL EFFLUENTS
Data Acquisition
Chemical data. EPA's data collection practices and procedures on chemicals, 11:38076 (R;US)
CHEMICAL EXPLOSIVES
See also NITROCELLULOSE
NITROMETHANE
PETN
TATB
Detonations
Study of numerical solution methods for two-phase flows (Numerical solution of deflagration-to-detonation transition in granular explosives using time-splitting technique), 11:38754 (R;US)
Photoacoustic Spectroscopy
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Photolysis
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Raman Spectra
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Raman Spectroscopy
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)

Remote Handling Equipment
Robotic arm for spray painting on explosive slurry, 11:38557 (R;US)

CHEMICAL HEAT PUMPS
Working Fluids
New industrial chemical heat pump working fluids. Final report, 11:38198 (R;US)

CHEMICAL INDUSTRY
Cogeneration
Potentials for fuel cells in refineries and chlor-alkali plants, 11:38138 (R;US)
Fuel Cells
Potentials for fuel cells in refineries and chlor-alkali plants, 11:38138 (R;US)
Risk Assessment
Bhopal: lessons learned, 11:38858 (R;US)

CHEMICAL LASERS
Chemical Reaction Kinetics
Ultrasensitive gain measurements in I2 and IF, 11:38610 (BA;US)
Gain
Ultrasensitive gain measurements in I2 and IF, 11:38610 (BA;US)
Impurities
Deactivation of HF(v = 3) by water. Technical report, 11:38574 (R;US)

CHEMICAL MUTAGENS
See MUTAGENS

CHEMICAL REACTORS
Operation
Understanding, operating, and testing fixed bed gasifiers, 11:37762 (BA;GB)
Performance
CO oxidation on Pd/Al_2O_3. Transient response and rate enhancement through forced concentration cycling, 11:38500 (J;GB)
Versatile zone refiner for liquids and low-melting solids, 11:38567 (J;US)
Performance Testing
Simplified IGCC with hot fuel gas combustion, 11:37837 (B;US)
Understanding, operating, and testing fixed bed gasifiers, 11:37762 (BA;GB)
Temperature Measurement
Acoustic velocity and attenuation measurements in thin rods with application to temperature profiling in coal gasification systems, 11:37283 (J;US)

CHEMICAL WARFARE
Factors limiting endurance of armor, artillery, and infantry units under simulated NBC conditions, 11:39432 (R;US)

CHEMICALS
See CARCINOGENS
MUTAGENS
SOLVENTS
SURFACTANTS

CHERENKOV COUNTERS
Performance
100 MH/sub z/ fiber optic single transient gamma ray detection system, 11:38732 (J;US)

CHERENKOV DETECTORS
See CHERENKOV COUNTERS

CHINA
International Relations
West European and East Asian perspectives on defense, deterrence, and strategy. Volume 1. Main report. Technical report, 1 December 1982-15 May 1984, 11:39434 (R;US)
Nuclear Power Plants
Major factors impacting costs of nuclear power plants, 11:37970 (J;US)

CHLAMYDOMONAS
Chloroplasts
Association of the chloroplastic respiratory and photosynthetic electron transport chains of Chlamydomonas reinhardii with photoreduction and the oxyhydrogen reaction, 11:38930 (J;US)

CHLOR-ALKALI INDUSTRY
See CHEMICAL INDUSTRY
CHLORINE
SODIUM HYDROXIDES

CHLORINATED AROMATIC HYDROCARBONS
Biodegradation
Human and environmental biodegradation of PCBs, 11:37462 (RA;US)
Combustion
PCB incinerator using molten glass both as heat source, 11:37843 (RA;US)
Pyroplasma detoxification of askarel fluids, 11:37841 (RA;US)
State-of-the-art review of combustion/pyrolysis by-products of PCB substitutes, 11:38515 (RA;US)
Cost
Insurance industry and the PCB exposure situation, 11:38091 (RA;US)
Decomposition
Chemical destruction of polychlorinated biphenyl, 11:37846 (RA;US)
Thermal treatment of PCBs and PCB-contaminated soils, 11:37842 (RA;US)
Decontamination
Managing cleanup of major PCB-contaminated sites, 11:37452 (RA;US)
Desorption
Desorption of PCBs in a soil-aqueous solution system, 11:38871 (RA;US)
Sorption/desorption of polychlorinated biphenyls in soils, 11:38870 (RA;US)
Ecological Concentration
Distribution of polychlorinated biphenyls within Bonneville Power Administration substation, 11:38866 (RA;US)
Measurement of fugitive atmospheric emissions of polychlorinated biphenyls from hazardous waste landfills, 11:38836 (J;US)
Polychlorinated dibenzofuran contamination of the State Highway Department Office Building in Santa Fe, New Mexico as a result of a PCB transformer malfunction, 11:38868 (RA;US)
Electrochemistry
Formation of PCDFs and PCDDs in electrical discharges, 11:38521 (RA;US)
Environmental Transport
Environmental fate of PCBs in mineral oil spills, 11:37441 (RA;US)
PCB environmental transport and fate modeling, 11:38798 (RA;US)
Hazards
Insurance industry and the PCB exposure situation, 11:38091 (RA;US)
Managing economic risks due to electrical equipment containing PCBs: analytical tools to support utility decisions, 11:38092 (RA;US)
Preventive measures for reduction of airborne PCB contamination risk, 11:38873 (RA;US)
Health Hazards
Human health risks from PCB-contaminated mineral oil transformers, 11:38956 (RA;US)
Occupational exposure of electric utility personnel to PCBs: a case study, 11:38874 (RA;US)
Indoor Air Pollution
Polychlorinated dibenzofuran contamination of the State Highway Department Office Building in Santa Fe, New Mexico as a result of a PCB transformer malfunction, 11:38868 (RA;US)
Insulating Oils
Measurement of PCDF and PCDD in utility equipment, 11:38875 (RA;US)
Leaching
Diffusional modeling during transformer retrofill, 11:37442 (RA;US)
Legal Aspects
Insurance industry and the PCB exposure situation, 11:38091 (RA;US)
Management
Managing economic risks due to electrical equipment containing PCBs: analytical tools to support utility decisions, 11:38092 (RA;US)

Measuring Methods
Analytical method for the analysis of chlorinated biphenyls in liquids and solids, 11:38864 (RA;US)
Clor-N-Oil test kit as a PCB screening tool, 11:37848 (RA;US)
Comparison of PCB analytical methods, 11:38862 (RA;US)
Evaluation of a portable test kit for testing PCB contaminated soils and oils in the field, 11:37847 (RA;US)
Field measurement of PCB's in soil and sediment using a portable gas chromatograph, 11:38865 (RA;US)
Monitoring
Development of the BPA substation soil PCB testing program, 11:38863 (RA;US)
Occupational Exposure
Occupational exposure of electric utility personnel to PCBs: a case study, 11:38874 (RA;US)
Pollution Control
Commonwealth Edison Company's PCB spill cleanup procedures, 11:37458 (RA;US)
Commonwealth Edison Company's transformer spill response preparedness, 11:37459 (RA;US)
In situ vitrification of PCB-contaminated soils, 11:37461 (RA;US)
Pollution Sources
PCB accident in France, 11:38877 (RA;US)
Safety of non-PCB reclassified transformers in fire incidents a building scale engineering study, 11:38876 (RA;US)
Pyrolysis
Pyrolysis and combustion of PCB contaminated transformer fluids, 11:38513 (RA;US)
State-of-the-art review of combustion/pyrolysis by-products of PCB substitutes, 11:38515 (RA;US)
Quantitative Chemical Analysis
Measurement of PCDF and PCDD in utility equipment, 11:38875 (RA;US)
Regulations
Computer aid for compliance with the recordkeeping and reporting requirements of the PCB regulations, 11:37463 (RA;US)
Fire involving PCB transformers further regulations managing the risk, 11:38089 (RA;US)
Removal
After a PCB fire - cleanup inside buildings contaminated with dioxins and furans, 11:37449 (RA;US)
Analysis of PCB capacitor spill cleanup effectiveness, 11:37460 (RA;US)
Development of a spray - vacuum head and support system for the removal of PCB contamination from walls, floors, and other surfaces, 11:38869 (RA;US)
Electrochemical process for decontaminating PCB-containing transformer coolants, 11:37845 (RA;US)
Managing a PCB fire decontamination, 11:37451 (RA;US)
Non-sodium process for removal of PCBs from contaminated transformer oil, 11:37844 (RA;US)
PCB removals - options and implementation, 11:37448 (RA;US)
PCB spill response and cleanup results, 11:37450 (RA;US)
Pilot plant studies for solvent extraction of polychlorinated biphenyl (PCB) from soil, 11:38867 (RA;US)
Solvent cleaning of PCB - contaminated soils, 11:38872 (RA;US)
Verification of PCB spill cleanup by sampling and analysis, 11:37455 (RA;US)
Risk Assessment
Insurance industry and the PCB exposure situation, 11:38091 (RA;US)
Managing economic risks due to electrical equipment containing PCBs: analytical tools to support utility decisions, 11:38092 (RA;US)
Preventive measures for reduction of airborne PCB contamination risk, 11:38873 (RA;US)
Risk assessment developments for PCB/PCDF decontamination projects, 11:37456 (RA;US)
Transformer/Capacitor Risk Management Model: TRIM, 11:38093 (RA;US)
Samplers
Clor-N-Oil test kit as a PCB screening tool, 11:37848 (RA;US)
Sampling
Analytical method for the analysis of chlorinated biphenyls in liquids and solids, 11:38864 (RA;US)
Development of the BPA substation soil PCB testing program, 11:38863 (RA;US)
Evaluation of a portable test kit for testing PCB contaminated soils and oils in the field, 11:37847 (RA;US)
Field measurement of PCB's in soil and sediment using a portable gas chromatograph, 11:38865 (RA;US)
Field testing of the S-Cubed gas chromatograph, PCBA-102, 11:37849 (RA;US)
Guidelines and alternatives for PCB soil-sampling programs, 11:37454 (RA;US)
Systematic approach to PCB capacitor spill cleanup compliance sampling, 11:37457 (RA;US)
Soil Chemistry
Desorption of PCBs in a soil-aqueous solution system, 11:38871 (RA;US)
Solvent Extraction
Pilot plant studies for solvent extraction of polychlorinated biphenyl (PCB) from soil, 11:38867 (RA;US)
Sorption
Sorption/desorption of polychlorinated biphenyls in soils, 11:38870 (RA;US)
Synthesis
Formation of PCDFs and PCDDs in electrical discharges, 11:38521 (RA;US)
PCBs fires: preliminary correlation of chlorobenzene and PCB contents of the fluid with PCDF and PCDD contents of soot, 11:38799 (RA;US)
Products of partial combustion of PCB alternative dielectric fluids, 11:37444 (RA;US)
Pyrolysis and combustion of PCB contaminated transformer fluids, 11:38513 (RA;US)
Safety of non-PCB reclassified transformers in fire incidents a building scale engineering study, 11:38876 (RA;US)
Uptake
Occupational exposure of electric utility personnel to PCBs: a case study, 11:38874 (RA;US)
Waste Management
Radioactive and non-radioactive polychlorinated biphenyl (PCB) management at Hanford, 11:37464 (RA;US)
Water Chemistry
Desorption of PCBs in a soil-aqueous solution system, 11:38871 (RA;US)

CHLORINE
Photolysis
Resonance Raman studies of radiation- and photo-chemical transients, 11:38505 (BA;US)
Raman Spectroscopy
Resonance Raman studies of radiation- and photo-chemical transients, 11:38505 (BA;US)

CHLORINE 37 TARGET
Neutrino Reactions
Solar neutrinos from the decay of ^{8}B, 11:39047 (J;US)

CHLORINE CHLORIDES
See CHLORINE

CHLORINE IONS
Electron-Ion Collisions
Contributions of excitation autoionization to electron-impact ionization of Mg-like Al^{+}, S^{4+}, Cl^{5+}, and Ar^{6+} ions, 11:39089 (J;US)
Electron-impact ionization of Mg-like ions: S^{4+}, Cl^{5+}, and Ar^{6+}, 11:39086 (J;US)
Electron-impact ionization in the magnesium-isoelectronic sequence, 11:39087 (J;US)

CHLOROPLASTS
Electron Transfer
Association of the chloroplastic respiratory and photosynthetic electron transport chains of Chlamydomonas reinhardii with photoreduction and the oxyhydrogen reaction, 11:38930 (J;US)
Phosphorylation
Cyclic and noncyclic photophosphorylation in isolated guard cell chloroplasts from Vicia faba L., 11:38933 (J;US)

CHONDRITES
Volatility
Shock-induced volatile loss from a carbonaceous chondrite: implications for planetary accretion, 11:39025 (R;US)
CHROMIUM
Geochemistry
Geochemical behavior of chromium species, 11:38878 (R;US)
Gettering
Chromium getter studies in the Tokamak Fusion Test Reactor, 11:39403 (J;US)
Liquid Column Chromatography
Evaluation of a direct injection nebulizer interface for flow injection analysis and high performance liquid chromatography with inductively coupled plasma-atomic emission spectroscopic detection, 11:38470 (R;US)
Magnetic Properties
Magnetic property changes in epitaxial metal film sandwiches, 11:38347 (J;NL)
Wear Resistance
Wear behavior of nitrogen-implanted metals, 11:38340 (J;US)
CHROMIUM 51
Energy Levels
Nuclear data sheets for A = 51, 11:39230 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 51, 11:39230 (J;US)

Crack Propagation
Stress corrosion characterization of turbine rotor materials. Phase 2. Final report, 11:37995 (R;US)
Gas Metal-Arc Welding
Welding procedure specification: manual gas tungsten arc and semiautomatic gas metal arc welding of chromium-nickel steel. Supplement 1. Records of procedure qualification tests, 11:38263 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Machine gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38265 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38264 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Semiautomatic gas metal arc welding of chromium-nickel steel, 11:38267 (R;US)
Gas Tungsten-Arc Welding
Gas tungsten arc welding of chromium-nickel steel to nickel-molybdenum-chromium-iron. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38288 (R;US)
Welding procedure specification: gas tungsten arc welding of chromium-nickel steel to chromium-molybdenum steel. Supplement 1. Records of procedure qualification tests, 11:38280 (R;US)
Welding procedure specification: manual gas tungsten arc and semiautomatic gas metal arc welding of chromium-nickel steel. Supplement 1. Records of procedure qualification tests, 11:38263 (R;US)
Welding procedure specification: gas tungsten arc and shielded metal arc welding of carbon steel. Supplement 1. Records of procedure qualification tests, 11:38279 (R;US)
Welding procedure specification: gas tungsten arc welding of carbon steel to chromium-nickel steel. Supplement 1. Records of procedure qualification tests, 11:38278 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Machine gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38265 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38264 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel, 11:38285 (R;US)

Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-copper, 11:38286 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-chromium-iron, 11:38287 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of austenitic chromium-nickel steel, 11:38266 (R;US)
Reactor Materials
Stress corrosion characterization of turbine rotor materials. Phase 2. Final report, 11:37995 (R;US)
Shielded Metal-Arc Welding
Welding procedure specification: gas tungsten arc and shielded metal arc welding of carbon steel. Supplement 1. Records of procedure qualification tests, 11:38279 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Shielded metal arc welding of chromium-nickel steel, 11:38262 (R;US)
Stress Corrosion
Stress corrosion characterization of turbine rotor materials. Phase 2. Final report, 11:37995 (R;US)

CHROMODYNAMICS

Activation Energy
Reactivity of coal in direct hydrogenation process. Technical progress report, March-May 1986, 11:37270 (R;US)
Appropriate Technology
Coal Technology Reference Guide, 11:37372 (R;US)
Ash Content
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Chemical Analysis
Determination of alcohols, phenols, and carboxylic acids using phosphorus-31 NMR spectroscopy, 11:37297 (J;US)
Distribution patterns relating to the proximate analysis of South African coals and their use as a basis for the interpretation of thermo-gravimetric data, 11:37294 (R;US)
Survey of the abrasion indices of coals from colliery-product samples, 11:37293 (R;US)
Chemical Composition
Coal liquefaction by molybdenum catalyzed hydrogenation in the absence of solvent, 11:37296 (J;NL)
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Cleaning
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)
Cocombustion
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 1. Technical results. Final report, July 1983-July 1984, 11:38806 (R;US)
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 2. Data supplement. Final report, July 1983-July 1984, 11:38807 (R;US)
Combustion
A systems study for the removal, recovery and disposal of carbon dioxide from fossil fuel power plants in the US, 11:37316 (J;US)
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)
Combustion of pulverized coal in various atmospheres, 11:37363 (R;US)
Differential optical absorption techniques for diagnostics of fossil fuel combustion. Technical progress report, July-September 1985, 11:37369 (R;US)
Differential optical absorption techniques for diagnostics of fossil fuel combustion. Technical progress report, April-June 1985, 11:37368 (R;US)
Economic comparison of coal and wood for industrial steam generation, 11:37379 (BA;US)
Elemental composition of suspended particulate matter from the combustion of coal and coal/refuse mixtures, 11:37329 (J;US)
Evaluation of non-US coals emission performance with the distributed mixing burner. IEA-low NOsub(x)/Sosub(x) burner project stage II, 11:37851 (R;SE)
Investigation of diesel fuel injection equipment response to coal slurry fuels, 11:37377 (J;US)
Optical particle counting, sizing, and velocimetry using intensity deconvolution, 11:37380 (J;US)
The combustion characteristics of coal slurry fuels in diesel engines: Detailed measurements and analysis, 11:37378 (J;US)
Corrosive Effects
Survey of the abrasion indices of coals from colliery-product samples, 11:37293 (R;US)
Crushing
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)
Desulfurization
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)

Synthesis and characterization of hexanuclear metal-metal bonded molydenum chloride sulfide cluster species, 11:38491 (R;US)
Electron Microprobe Analysis
Report on DOE coal contract, 11:37291 (R;US)
Report on DOE coal contract, 11:37352 (R;US)
Electron Microscopy
Report on DOE coal contract, 11:37352 (R;US)
Exports
Recent developments in US coal exporting capability. A technical report pertinent to exporting US coal to Pacific Rim markets, 11:37383 (R;US)
Report on potential for cost reductions in inland transportation of US coal exports. Final report, 11:37358 (R;US)
Extraction
Coal conversion and hydrogen utilization in catalytic liquefaction at low temperatures, 11:37282 (J;NL)
Flash Hydropyrolysis Process
Natural gas in novel processes for fuels and chemical feedstocks, 11:37491 (BA;US)
Flotation
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Fluidized-Bed Combustion
Atmospheric fluidized-bed combustion. Technology status report, 11:37370 (R;US)
Computed and experimental bubbles in a cold bed model of a fluidized-bed combustor, 11:37376 (BA;US)
Fuel Feeding Systems
Control of fuel-air ratio in pulverized fuel burners, 11:37373 (R;SE;In Swedish)
Gasification
Technical development in order to obtain satisfactory combustion, 11:37262 (RA;SE)
Hydrogenation
Coal liquefaction by molybdenum catalyzed hydrogenation in the absence of solvent, 11:37296 (J;NL)
Reactivity of coal in direct hydrogenation process. Technical progress report, March-May 1986, 11:37270 (R;US)
Marketing
Recent developments in US coal exporting capability. A technical report pertinent to exporting US coal to Pacific Rim markets, 11:37383 (R;US)
Minerals
Application of automated image analysis to the study of mineral matter in raw and processed coals, 11:37292 (R;US)
Moessbauer Effect
Report on DOE coal contract, 11:37291 (R;US)
Optical Microscopy
Report on DOE coal contract, 11:37291 (R;US)
Production
Final report on US - Italian coal logistics, 11:37353 (R;US)
Pyrolysis
Pyrolysis and devolitalization, 11:37265 (R;US)
Quality Control
Coal Technology Reference Guide, 11:37372 (R;US)
Quantitative Chemical Analysis
Application of automated image analysis to the study of mineral matter in raw and processed coals, 11:37292 (R;US)
Scanning Electron Microscopy
Application of automated image analysis to the study of mineral matter in raw and processed coals, 11:37292 (R;US)
Report on DOE coal contract, 11:37291 (R;US)
Report on DOE coal contract, 11:37352 (R;US)
Structural Chemical Analysis
Methanol chemical ionization of ketones and aldehydes, 11:37298 (BA;US)
Sulfur Content
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Supply and Demand
Final report on US - Italian coal logistics, 11:37353 (R;US)
Modifications to the International Coal Trade Model. Final report, 11:37382 (R;US)
Testing
Evaluation of non-US coals emission performance with the distributed mixing burner. IEA-low NOsub(x)/Sosub(x) burner project stage II, 11:37851 (R;SE)
Trade
Final report on US - Italian coal logistics, 11:37353 (R;US)
Modifications to the International Coal Trade Model. Final report, 11:37382 (R;US)
Transportation Systems
Report on potential for cost reductions in inland transportation of US coal exports. Final report, 11:37358 (R;US)
Washing
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)

COAL DEPOSITS

Leasing
Potential effects of Section 3 of the Federal Coal Leasing Amendments Act of 1976. Special report, 11:37393 (R;US)
Maps
Low-rank coal program. Technology status report, 11:37260 (R;US)
Methane
Field evaluation of gas-lift and progressive-cavity pumps as effective dewatering methods for coalbed methane wells. Final report, April 1984-December 1985, 11:37496 (R;US)
Hydrologic characterization of coal seams for methane recovery--Activities 3 and 6 progress report: computer program for optimal dewatering for methane production. Topical report, January 1983-December 1984, 11:37497 (R;US)
Mine Draining
Peat deposits drainage and environment, 11:37321 (RA;SE)
Water Removal
Field evaluation of gas-lift and progressive-cavity pumps as effective dewatering methods for coalbed methane wells. Final report, April 1984-December 1985, 11:37496 (R;US)
Hydrologic characterization of coal seams for methane recovery--Activities 3 and 6 progress report: computer program for optimal dewatering for methane production. Topical report, January 1983-December 1984, 11:37497 (R;US)

COAL FINES
Combustion
Acoustic enhancement of pulverized coal combustion, 11:37381 (BA;US)
Particle Size
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)

COAL GAS
Purification
Trace contaminant removal from hot coal gas for molten carbonate fuel cell application. Final report, 11:38137 (R;US)

COAL GASIFICATION
See also MOLTEN SALT COAL GASIFICATION PROCESS
Natural gas in novel processes for fuels and chemical feedstocks, 11:37491 (BA;US)
E Codes
Utilization of the S-cubed, entrained-flow coal gasification model (EFCG), 11:37272 (R;US)
Environmental Impacts
Coal-gasification environmental data summary: trace elements. Final report, September 1984-December 1985, 11:37275 (R;US)
Fluidized-Bed Combustors
Fluidised-bed gasification rig - final report, 11:37274 (R;US)
Waste Water
Anaerobic SBR treatment of coal conversion wastewaters. Third quarterly report, 11:37306 (R;US)

COAL GASIFICATION PLANTS
Air Pollution Abatement
Simplified IGCC with hot fuel gas combustion, 11:37837 (B;US)
Air Pollution Control
Power generation through coal gasification an overview of DOE-funded projects, 11:37838 (B;US)
Chemical Reactors
Acoustic velocity and attenuation measurements in thin rods with application to temperature profiling in coal gasification systems, 11:37283 (J;US)
Simplified IGCC with hot fuel gas combustion, 11:37837 (B;US)
Coal-Fired Gas Turbines
Simplified IGCC with hot fuel gas combustion, 11:37837 (B;US)
Research Programs
Power generation through coal gasification an overview of DOE-funded projects, 11:37838 (B;US)
COAL INDUSTRY
Energy Models
Modifications to the International Coal Trade Model. Final report, 11:37382 (R;US)
COAL LIQUEFACTION
Natural gas in novel processes for fuels and chemical feedstocks, 11:37491 (BA;US)
By-Products
Biomedical implications of altered product composition in advanced coal liquefaction processes, 11:37278 (J;NL)
Catalysis
Catalysis of coal conversion at mild temperatures, 11:37281 (J;NL)
Catalysts
Coal conversion and hydrogen utilization in catalytic liquefaction at low temperatures, 11:37282 (J;NL)
Coal liquefaction by molybdenum catalyzed hydrogenation in the absence of solvent, 11:37296 (J;NL)
Direct coal liquefaction using iron-titanium hydride as a hydrogen distribution and catalytic material. Final report, 11:37269 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 7, March 1-May 31, 1986, 11:37268 (R;US)
Study of some transition metal complexes as process catalysts. Quarterly report, March 1-May 31, 1986, 11:37267 (R;US)
Chemical Reactions
Coal liquefaction by molybdenum catalyzed hydrogenation in the absence of solvent, 11:37296 (J;NL)
Hydrogen Transfer
Coal conversion and hydrogen utilization in catalytic liquefaction at low temperatures, 11:37282 (J;NL)
Reaction Intermediates
Biomedical implications of altered product composition in advanced coal liquefaction processes, 11:37278 (J;NL)
Reaction Kinetics
Reactivity of coal in direct hydrogenation process. Technical progress report, March-May 1986, 11:37270 (R;US)
Waste Water
Anaerobic SBR treatment of coal conversion wastewaters. Third quarterly report, 11:37306 (R;US)
Yields
Direct coal liquefaction using iron-titanium hydride as a hydrogen distribution and catalytic material. Final report, 11:37269 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 7, March 1-May 31, 1986, 11:37268 (R;US)
Reactivity of coal in direct hydrogenation process. Technical progress report, March-May 1986, 11:37270 (R;US)
COAL LIQUEFACTION PLANTS
Design
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Personnel
Epidemiological study of Solvent Refined Coal (SRC) workers. Final report, August 1982-December 1985, 11:37386 (R;US)
COAL LIQUIDS
Carcinogen Screening
Biomedical implications of altered product composition in advanced coal liquefaction processes, 11:37278 (J;NL)
Chemical Properties
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)
Coordinated Research Programs
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Denitrification
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986, 11:37273 (R;US)
Hydrogenation
Biomedical implications of altered product composition in advanced coal liquefaction processes, 11:37278 (J;NL)
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986, 11:37273 (R;US)
Hydroprocessing of nondeashed coal-derived residuum: evaluation of catalyst performance, 11:37279 (J;NL)
Integrated report on the toxicological mitigation of coal liquids by hydrotreatment and other processes, 11:37388 (R;US)
Information
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Mutagenesis
Chemical basis for photomutagenicity in synthetic fuels, 11:38958 (R;US)
Physical Properties
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)
Thermodynamic Properties
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Thermodynamic characterization of conversion-process oils as materials of continuous distribution. Final report, January 1983-December 1985, 11:37505 (R;US)
Toxicity
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)
Integrated report on the toxicological mitigation of coal liquids by hydrotreatment and other processes, 11:37388 (R;US)
COAL MINES
Compliance
Quality assurance program for field health laboratories, 11:37387 (R;US)
Dusts
Quality assurance program for field health laboratories, 11:37387 (R;US)
Suppression of coal-dust explosions with inert dusts and moisture. Research report, 11:37389 (R;US)
Economic Analysis
Cost comparison of selected US and Colombian coal mines - analyses of cost-structure differences between steam coal mines in US and Colombia, 11:37384 (R;US)
Explosions
Suppression of coal-dust explosions with inert dusts and moisture. Research report, 11:37389 (R;US)
Inspection
Quality assurance program for field health laboratories, 11:37387 (R;US)
COAL MINING
Accidents
Injury experience in coal mining, 1982, 11:37337 (R;US)

Continuous Miners
Investigation and control of noise generated during coal cutting. Open File report, September 1978-August 1985, 11:37343 (R;US)
Explosive Fracturing
Delayed-blasting tests to improve highwall stability - a final report. Report of Investigations/1986, 11:37344 (R;US)
Short-delay blasting in underground coal mines. Information Circular/1986, 11:37345 (R;US)
Surface Mining
Highwall elimination and return to approximate original contour as required in the Surface Mining Control and Reclamation Act of 1977. Final report, 11:37342 (R;US)
Surface-mine reclamation at the Elkins Mine Drainage Demonstration Project after 17 years, 11:38885 (R;US)
Walls
Delayed-blasting tests to improve highwall stability - a final report. Report of Investigations/1986, 11:37344 (R;US)

COAL PREPARATION

COLD NEUTRONS
Beam Production
Cold and ultra cold neutron beams for fundamental physics research at the Institute Laue-Langevin, 11:38007 (RA;US)
Meetings
Investigation of fundamental interactions with cold neutrons. Proceedings of a workshop. NBS Special Publication 711, 11:39206 (R;US)
Neutron Reactions
Investigation of fundamental interactions with cold neutrons. Proceedings of a workshop. NBS Special Publication 711, 11:39206 (R;US)
Neutron Sources
Superthermal sources of ultra-cold neutrons (UCN), 11:39274 (RA;US)
Research Programs
NBS cold neutron research facility, 11:38006 (RA;US)
COLD PLASMA
Drift Instability
Nonlinear diocotron mode, 11:39318 (J;US)
Excitation
Steady-state approach to excitation mechanisms in the ICP (inductively-coupled plasma). Technical report, 11:39112 (R;US)
ICR Heating
Effects of minority ions on the propagation of the Fast Alfven wave, 11:39336 (BA;US)
Ionization
Steady-state approach to excitation mechanisms in the ICP (inductively-coupled plasma). Technical report, 11:39112 (R;US)
Lower Hybrid Heating
Coupling of fast waves in the LHRF to non-uniform plasma, 11:39340 (BA;US)
Nonlinear Problems
Nonlinear diocotron mode, 11:39318 (J;US)
COLLECTIVE EXCITATIONS
Interacting Boson Model
Interacting Boson Model: selected recent developments, 11:39256 (R;US)
COLLIERIES

COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Air Pollution Abatement
Simplified IGCC with hot fuel gas combustion, 11:37837 (B;US)
Air Pollution Control
Power generation through coal gasification an overview of DOE-funded projects, 11:37838 (B;US)
Chemical Reactors
Simplified IGCC with hot fuel gas combustion, 11:37837 (B;US)
Coal-Fired Gas Turbines
Simplified IGCC with hot fuel gas combustion, 11:37837 (B;US)
Economic Analysis
Natural gas fired combined cycle generators: Dominant solutions in capacity planning[1], 11:38132 (J;US)
Feasibility Studies
Natural gas fired combined cycle generators: Dominant solutions in capacity planning[1], 11:38132 (J;US)
Research Programs
Power generation through coal gasification an overview of DOE-funded projects, 11:37838 (B;US)
COMBUSTION
See also FLUIDIZED-BED COMBUSTION
Additives
Evaluation of non-US coals emission performance with the distributed mixing burner. IEA-low NOsub(x)/Sosub(x) burner project stage II, 11:37851 (R;SE)
Air Pollution
Environmental regulations to the development and utilization of Minnesota's peat resources - energy production, 11:37392 (RA;SE)
Air Pollution Abatement
Evaluation of non-US coals emission performance with the distributed mixing burner. IEA-low NOsub(x)/Sosub(x) burner project stage II, 11:37851 (R;SE)
Air Pollution Control
Peat - coal - a comparison, 11:37287 (RA;SE)
Bench-Scale Experiments
Acoustic enhancement of pulverized coal combustion (Effect of soundwaves; 1100 to 3000 Hz; up to lb), 11:37381 (BA;US)
Controlled Atmospheres
Combustion of pulverized coal in various atmospheres, 11:37363 (R;US)
Diagnostic Techniques
Differential optical absorption techniques for diagnostics of fossil fuel combustion. Technical progress report, July-September 1985, 11:37369 (R;US)
Differential optical absorption techniques for diagnostics of fossil fuel combustion. Technical progress report, April-June 1985, 11:37368 (R;US)
Efficiency
Combustion tests of peat pellets by 20 kW test furnace, 11:37375 (R;FI;In Finnish)
Measurements and analyses of flue gas performed at the waste incinerator plant of Aalidhem at Umeaa, 11:38829 (R;SE;In Swedish)
Gaseous Wastes
Elemental composition of suspended particulate matter from the combustion of coal and coal/refuse mixtures, 11:37329 (J;US)
Mathematical Models
Mathematics of combustion, 11:38538 (B;US)
Research Programs
Survey of combustion research in the European Community, 11:38662 (R;DE)
Temperature Distribution
Combustion of pulverized coal in various atmospheres, 11:37363 (R;US)
COMBUSTION CHAMBERS
Combustion Kinetics
Conical grid plate flame stabilizers for combustor primary zones, 11:38671 (J;IT)
Exhaust Gases
Conical grid plate flame stabilizers for combustor primary zones, 11:38671 (J;IT)
Film Cooling
Full coverage discrete hole film cooling - the influence of hole size, 11:38669 (J;IT)

Flow Rate
Method to measure the fuel distribution and the fuel captured by V-gutter flameholder in high speed airstream, 11:38667 (J;IT)
Fuel Injection Systems
Conical grid plate flame stabilizers for combustor primary zones, 11:38671 (J;IT)
Heat Resisting Alloys
Oxidation resistance of gas turbine combustion materials, 11:38330 (J;IT)
Protective Coatings
Rocket thrust chamber thermal barrier coatings. Final Report, December 1981-October 1984, 11:38354 (R;US)
Sprayed Coatings
Strain isolated ceramic coatings for gas turbine engines, 11:38375 (J;IT)
Strain Gages
Demonstration test of burner liner strain measuring system. Final Report, 11:38664 (R;US)

COMBUSTION ENGINEERING STANDARD REACTOR
See CE STANDARD REACTOR

COMBUSTION HEAT
Measuring Methods
New method for determining heats of combustion of gaseous hydrocarbons, 11:38534 (R;US)

COMBUSTION PRODUCTS
Air Pollution
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 1. Technical results. Final report, July 1983-July 1984, 11:38806 (R;US)
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 2. Data supplement. Final report, July 1983-July 1984, 11:38807 (R;US)
Chemical Composition
Emissions from peat burning, 11:37366 (RA;SE)
Environmental Impacts
Environmental concerns related to natural gas vehicles, 11:37503 (BA;US)
Materials Recovery
Resource recovery from municipal solid waste. Bulletin, 11:38208 (R;US)
Quantitative Chemical Analysis
Emissions from peat burning, 11:37366 (RA;SE)

COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS
Design
Technical development in order to obtain satisfactory combustion, 11:37262 (RA;SE)

COMETS
Computerized Simulation
Model of Comet P/Giacobini-Zinner, 11:39051 (J;US)
Electron Density
Three component plasma electron distribution in the intermediate ionized coma of comet Giacobini-Zinner, 11:39052 (J;US)
Heavy Ions
Interaction of heavy ions from comet P/Giacobini-Zinner with the solar wind, 11:39050 (J;US)
Interactions
Comet/solar wind transition region at Giacobini-Zinner, 11:39053 (J;US)
Interaction of heavy ions from comet P/Giacobini-Zinner with the solar wind, 11:39050 (J;US)
Simulation of the solar wind interaction with the outer regions of the coma, 11:39049 (J;US)
Mathematical Models
Model of Comet P/Giacobini-Zinner, 11:39051 (J;US)

COMMERCIAL BUILDINGS

Review of the current status of commercial end-use load shape data, 11:38117 (RA;US)
Energy Consumption
Early results from commercial ELCAP buildings: schedules as a primary determinant of load shapes in the commercial sector, 11:38174 (R;US)
United states commercial building population and energy consumption: an overview. Topical report, November 1985-March 1986, 11:38170 (R;US)
Marketing Research
United states commercial building population and energy consumption: an overview. Topical report, November 1985-March 1986, 11:38170 (R;US)
Power Demand
Application of model based sample design for the Pacific end-use metering project, 11:38118 (RA;US)
Commercial hourly end-use study at Seattle City Light, 11:38116 (RA;US)
Commercial building recruitment for the end-use load and conservation assessment program, 11:38123 (RA;US)
Data acquisition and management, 11:38124 (RA;US)
Data needs for end-use planning in the commercial sector, 11:38113 (RA;US)
Data verification in end-use metering, 11:38125 (RA;US)
ELCAP: measurement plans and equipment installation, 11:38121 (RA;US)
ELCAP instrumentation, 11:38120 (RA;US)
Instrumentation and data collection, 11:38122 (RA;US)
Issues and approaches for designing commercial building samples, 11:38119 (RA;US)
Overview of ELCAP, 11:38115 (RA;US)
Review of the current status of commercial end-use load shape data, 11:38117 (RA;US)

COMMUNITIES
Energy Conservation
[Role of small business development in energy conservation]. Final report, 11:38149 (R;US)

COMMUNITIES (ECOLOGICAL)
See ECOSYSTEMS

COMPOSITE MATERIALS
Mechanical Properties
Mechanical properties of unidirectional and fabric graphite/epoxy composites, 11:38392 (R;US)
Meetings
Proceedings of the second annual review of the center for composite materials and structures, 11:38389 (R;US)

COMPOSITE MODELS
See also QUARK MODEL
Rest Mass
Mass generation in composite models, 11:39161 (R;DE)

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSIBLE FLOW
Flow Rate
Prediction of flow rates through an orifice at pressures corresponding to the transition between molecular and isentropic flow, 11:39121 (J;US)
Isentropic Processes
Prediction of flow rates through an orifice at pressures corresponding to the transition between molecular and isentropic flow, 11:39121 (J;US)
Mathematical Models
Prediction of flow rates through an orifice at pressures corresponding to the transition between molecular and isentropic flow, 11:39121 (J;US)
Transition Flow
Prediction of flow rates through an orifice at pressures corresponding to the transition between molecular and isentropic flow, 11:39121 (J;US)

COMPRESSORS
High-Voltage Pulse Generators
Flat-plate experiments on magnetically accelerated metal liners, 11:38561 (R;US)
Optimization
Compressor configuration and design optimization for the high reliability gas turbine, 11:37830 (R;US)

Service Life
Analysis of heat pump compressor life. Final report, 11:38155 (R;US)
COMPUTER CALCULATIONS
Methods, not results.
Quality Assurance
Computer calculations to develop quality assurance (QA) methodology for nuclear waste repository design calculations: isothermal parallel calculation. Topical report RSI-0283, 11:37626 (R;US)
Methodology for performing parallel design calculations (nuclear waste repository application), 11:37624 (R;US)
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.

COMPUTER-AIDED MANUFACTURING
Power Demand
Impact of computer-integrated manufacturing on electricity end use. Final report, 11:38126 (R;US)
COMPUTERIZED CONTROL SYSTEMS
Design
Central gas analysis laboratory with remote sampling, 11:38742 (J;US)
Development of an expert systems computer program for control panel design enhancement, 11:37490 (R;US)
Tokamak Fusion Test Reactor gas injection control system design and operation, 11:39386 (J;US)
Operation
Tokamak Fusion Test Reactor gas injection control system design and operation, 11:39386 (J;US)
Recommendations
Development of an expert systems computer program for control panel design enhancement, 11:37490 (R;US)
CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Research Programs
AlGaAs-GaAs patterned Ge tunnel junction cascade concentrator solar cell. Annual subcontract report, 15 October 1984-14 October 1985, 11:37740 (R;US)
CONCRETES
Heat Storage
Use of concrete hollow core slabs as a part of the heating and ventilation systems, 11:38184 (R;FI;In Finnish)
Mechanical Properties
Physical and chemical characterization of 50 pulverized coal ashes with respect to partial cement replacement in concrete, 11:37307 (R;NL)
Performance Testing
Development and implementation: Test Series A of the Small-Scale Seal Performance Tests (Salt-water-based), 11:38410 (R;US)
CONDENSATES
Recovery
Degassing of feedwater at thermal equilibrium, 11:38200 (R;SE;In Swedish)
CONDENSERS

Corrosion Inhibitors
Corrosion inhibitors for intermediate cooling systems, 11:38301 (R;SE;In Swedish)
COORDINATED RESEARCH PROGRAMS
Research based on a common plan but carried out in various locations. To be used in coordination with institutions or countries involved.
Recommendations
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
COPOLYMERS
Ion Scattering Analysis
Surface characterization of an energetic material, pentaerythritoltetranitrate (PETN), having a thin coating achieved through a starved addition microencapsulation technique, 11:38516 (R;US)
Physical Properties
Physical characteristics of diblock polyacetylene copolymers: processability-conductivity correlation, 11:38394 (R;US)
X-Ray Spectroscopy
Surface characterization of an energetic material, pentaerythritoltetranitrate (PETN), having a thin coating achieved through a starved addition microencapsulation technique, 11:38516 (R;US)
COPPER
Chemical Reactions
Characterization of copper-ceramic interfaces, 11:38376 (J;US)
Deformation
Effect of strain and strain rate on residual microstructures in copper, 11:38244 (R;US)
Diffusion
Ion scattering spectroscopy and Auger electron spectroscopy depth profiles of silver—copper thin film interdiffusion, 11:38322 (J;US)
Ecological Concentration
Temporal trends of contamination of Puget Sound, 11:38902 (R;US)
Electron Diffraction
Experimental/theoretical comparison of spin-polarized low energy electron diffraction from the Cu(100) surface, 11:38317 (J;US)
Gas Tungsten-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of copper, 11:38272 (R;US)
Impurities
Ion scattering spectroscopy and Auger electron spectroscopy depth profiles of silver—copper thin film interdiffusion, 11:38322 (J;US)
Microstructure
Effect of strain and strain rate on residual microstructures in copper, 11:38244 (R;US)
Neutron Reactions
Measurement of nonelastic cross section for the elements Cu, Si at 14.9 MeV, 11:39273 (R;XA)
Oxidation
Characterization of copper-ceramic interfaces, 11:38376 (J;US)
Pairing Interactions
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Raman Spectroscopy
In situ Raman spectroscopy of anodic films formed on copper and silver in sodium hydroxide solution, 11:38476 (J;US)
Shock Waves
Effect of residual strain on twinning in shock-loaded copper, 11:38243 (R;US)
Structural Models
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Surface Properties
Electron spectroscopy in fundamental catalytic studies, 11:38295 (R;US)

Topography
Experimental/theoretical comparison of spin-polarized low energy electron diffraction from the Cu(100) surface, 11:38317 (J;US)
Twinning
Effect of residual strain on twinning in shock-loaded copper, 11:38243 (R;US)
Uptake
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:38969 (J;NL)
X-Ray Spectra
Low energy x-ray spectra measured with a mercuric iodide energy dispersive spectrometer in a scanning electron microscope, 11:38716 (R;US)

COPPER 63
Giant Resonance
Electroexcitation of giant multipole resonances in ^{63}Cu, 11:39235 (J;US)

COPPER 63 TARGET
Electron Reactions
Electroexcitation of giant multipole resonances in ^{63}Cu, 11:39235 (J;US)

COPPER 67
Isotope Production
Production of no-carrier added ^{67}Cu, 11:38527 (J;GB)

COPPER ALLOYS
MONEL
See also MONEL 400
Energy
Density-functional theory for random alloys: Total energy within the coherent-potential approximation, 11:38312 (J;US)
Gas Tungsten-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-copper, 11:38274 (R;US)

COPPER SELENIDE SOLAR CELLS
Cost
Characterization of CdZnS/CuInSe$_2$ thin-film solar cells, 11:37761 (BA;US)
Efficiency
Characterization of CdZnS/CuInSe$_2$ thin-film solar cells, 11:37761 (BA;US)
Fabrication
Scanning Auger microprobe studies of ball cratered CdS/CuInSe$_2$ solar cells, 11:37750 (J;US)

COPPER SELENIDES
Chemical Composition
Scanning Auger microprobe studies of ball cratered CdS/CuInSe$_2$ solar cells, 11:37750 (J;US)
Electron Microprobe Analysis
Scanning Auger microprobe studies of ball cratered CdS/CuInSe$_2$ solar cells, 11:37750 (J;US)
Electron Microscopy
Scanning Auger microprobe studies of ball cratered CdS/CuInSe$_2$ solar cells, 11:37750 (J;US)

COPPER SILICIDES
Magnetic Properties
Magnetic behavior in the U/sub 1-x/Th/sub x/Cu$_2$Si$_2$ system, 11:38406 (R;US)

Topics in inflationary cosmologies, 11:39020 (R;US)
Symmetry Breaking
Topics in inflationary cosmologies, 11:39020 (R;US)

COSO HOT SPRINGS
Monitoring
Coso monitoring program, January 1984 through September 1985. Summary report, January 1984-September 1985, 11:37814 (R;US)

COUNTY BUILDINGS
See PUBLIC BUILDINGS

COURT BUILDINGS
See PUBLIC BUILDINGS

CP INVARIANCE
Symmetry Breaking
CP violation and generation mixing, 11:39199 (J;US)

CRACKS
Detection
Detection and sizing of defects in offshore steel structures by the diffraction of ultrasound, 11:37440 (RA;NO)

CREEKS
See STREAMS

CRESOLS
Anaerobic Digestion
Anaerobic SBR treatment of coal conversion wastewaters. Third quarterly report, 11:37306 (R;US)

CRESYLIC ACID
See CRESOLS

CRITICAL HEAT FLUX
Departure Nucleate Boiling
MDNBR 95/95 confidence interval determination for nonparametric CHF statistics, 11:37910 (J;US)
Experimental Data
Heat transfer and pressure drop of boiling R114 in a horizontal tube, 11:37835 (R;FI)

CRITICAL MASS
Numerical Solution
Existence of minimum critical mass solutions for diffusion equations of reactor theory, 11:37985 (R;US)
CRITICALITY
Computer Codes
Standard problem exercise to validate criticality codes for large arrays of packages of fissile materials, 11:37520 (R;US)
CRITICALITY ACCIDENTS
See CRITICALITY
CROPS
Productivity
Effects of acid rain, alone and in combination with gaseous pollutants, on growth and yield of crop plants, 11:38792 (R;US)
CROSSROADS PROJECT
Nuclear Explosions
Operation Crossroads. Report of the Technical Director. Volume 2. Enclosures L thru R, 11:38771 (R;US)
CRUDE OIL
See PETROLEUM
CRYOGENICS
Meetings
Special course on cryogenic technology for wind tunnel testing, 11:38544 (R;FR)
CRYSTALS
See also DENDRITES
Calibration
Crystal R/sub c/ calibrations with an uncollimated, point x-ray source, 11:38404 (R;US)
Reflectivity
Crystal R/sub c/ calibrations with an uncollimated, point x-ray source, 11:38404 (R;US)
CURIUM 248 TARGET
Calcium 48 Reactions
Production of cold target-like fragments in the reaction of $^{48}Ca + ^{248}Cm$, 11:39254 (J;US)
CURRENT-DRIVE HEATING
Computing of RF heating and current-drive in tokomaks, 11:39314 (R;CH)
CYCLIC ACCELERATORS
See also BEVALAC
SYNCHROTRONS
Beam Optics
Optics modules for circular accelerator design, 11:38693 (R;US)
CYSTEINE
Chemical Properties
Chemistry of a flue gas combined NO/sub x/ and SO_2 scrubber employing ferrous cysteine additives, 11:37312 (R;US)
CYTOCHROME OXIDASE
Oxidation
Time-resolved resonance Raman spectroscopy of transient species formed during the oxidation of cytochrome oxidase by dioxygen, 11:38520 (BA;US)

D

D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
Lifetime
Lifetime of D^0 charmed mesons produced in neutrino interactions, 11:39157 (J;US)
Weak Hadronic Decay
Direct measurements of charmed-D-meson hadronic branching fractions, 11:39156 (J;US)
Search for nonspectator decays of the D^0, 11:39155 (J;US)
D PLUS RESONANCES
See D MESONS
D ZERO RESONANCES
See D MESONS
D-1865 RESONANCES
See D MESONS
DATA ACQUISITION
Administrative Procedures
Chemical data. EPA's data collection practices and procedures on chemicals, 11:38076 (R;US)
DATA ACQUISITION SYSTEMS
Design
Versatile data acquisition system for low-energy electron diffraction, 11:38743 (J;US)
Performance
ELCAP instrumentation, 11:38120 (RA;US)
DATA STORAGE DEVICES

DECONTAMINATION
Cost
After a PCB fire - cleanup inside buildings contaminated with dioxins and furans, 11:37449 (RA;US)
Cost Benefit Analysis
Decontamination of an askarel-filled network transformer, 11:37447 (RA;US)
Efficiency
Analysis of PCB capacitor spill cleanup effectiveness, 11:37460 (RA;US)
Management
Managing cleanup of major PCB-contaminated sites, 11:37452 (RA;US)
Planning
Commonwealth Edison Company's PCB spill cleanup procedures, 11:37458 (RA;US)
Commonwealth Edison Company's transformer spill response preparedness, 11:37459 (RA;US)
Managing cleanup of major PCB-contaminated sites, 11:37452 (RA;US)
Tools
Use of a cutting and cleaning system at the West Valley Demonstration Project, March 1985-January 1986, 11:37600 (R;US)
Verification
Commonwealth Edison Company's transformer spill response preparedness, 11:37459 (RA;US)
Systematic approach to PCB capacitor spill cleanup compliance sampling, 11:37457 (RA;US)
Verification of PCB spill cleanup by sampling and analysis, 11:37455 (RA;US)
DECONTAMINATION FACTOR
See DECONTAMINATION
DEER
Radionuclide Kinetics
Environmental applications for an intrinsic germanium well detector, 11:38883 (BA;US)
DEFORMED NUCLEI
Neutron Reactions
Neutron scattering on deformed nuclei, 11:39216 (J;US)

DEGREE DAYS
Mathematical Models
Infiltration degree-days. A statistic for quantifying infiltration-related climate, 11:38157 (R;US)
DEHUMIDIFIERS
Bench-Scale Experiments
SERI Desiccant Cooling Test Facility. Status report. Preliminary data on the performance of a rotary parallel-passage silica-gel dehumidifier, 11:37794 (R;US)
DEHYDROGENASES
See OXIDOREDUCTASES
DELAYED RADIATION INJURIES
See RADIATION INJURIES
DENDRITES
Crystal Growth
Analytic theory of the selection mechanism in the Saffman-Taylor problem, 11:39118 (J;US)
DENITRIFICATION
Catalysts
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986, 11:37273 (R;US)
Economics
Alternative method for the removal of oxides of nitrogen and sulfur from combustion processes. Second quarterly technical status report, September 17-March 31, 1986, 11:38531 (R;US)
Evaluation
Evaluation of the NOXSO combined NO/sub x/SO_2 flue gas treatment process, 11:38797 (R;US)
Feasibility Studies
Alternative method for the removal of oxides of nitrogen and sulfur from combustion processes. Second quarterly technical status report, September 17-March 31, 1986, 11:38531 (R;US)
DENMARK
Slurry Pipelines
Pipeline transport - an energy saving form of transportation, 11:38189 (R;DK;In Danish)
DEPLETED URANIUM
Melting
Production prove-out of a process for remelting depleted-uranium machining chips by vacuum induction. Final report, October 1983-October 1984, 11:37511 (R;US)
DEPOSITION
For the laying down of a substance on a surface; for deposition of elements and nuclides in tissues of living organisms use RETENTION.
Monitoring
Inventory of current environmental monitoring projects in the US-Canadian transboundary region, 11:38101 (R;US)
DESERTRON
See SUPERCONDUCTING SUPER COLLIDER
DESERTS
Cacti
Concomitant changes in high temperature tolerance and heat-shock proteins in desert succulents (Agave deserti, Carnegiea gigantea, Ferocactus acanthodes), 11:38955 (J;US)
DESIGN
Planning
Factors influencing the design of the Remote Analytical Laboratory at the Idaho Chemical Processing Plant, 11:37514 (J;US)
DESULFURIZATION
Data Base Management
Utility FGD [flue gas desulfurization] survey, October-December 1984. Project summary, 11:37839 (R;US)
Economics
Alternative method for the removal of oxides of nitrogen and sulfur from combustion processes. Second quarterly technical status report, September 17-March 31, 1986, 11:38531 (R;US)
Evaluation
Evaluation of the NOXSO combined NO/sub x/SO_2 flue gas treatment proces:, 11:38797 (R;US)
Feasibility Studies
Alternative method for the removal of oxides of nitrogen and sulfur from combustion processes. Second quarterly technical status report, September 17-March 31, 1986, 11:38531 (R;US)
Flue Gas
Final report on the development project Flue Gas Cleaning, 11:38679 (R;DK;In Danish)
Pollution Control Equipment
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 1. Categorical summaries of FGD systems, 11:37840 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 1 of 2. Design performance data for operating FGD systems, 11:37852 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 2 of 2. Design performance data for operating FGD systems, 11:37853 (R;US)
Systems Analysis
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 1. Categorical summaries of FGD systems, 11:37840 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 1 of 2. Design performance data for operating FGD systems, 11:37852 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 2 of 2. Design performance data for operating FGD systems, 11:37853 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Project summary, 11:37839 (R;US)
Waste Product Utilization
Utilization of by-product from the wet-dry flue gas desulfurization method, 11:38828 (R;SE;In Swedish)
DETECTION (FAILED ELEMENT)
See FAILED ELEMENT DETECTION
DETECTION (NUCLEAR EXPLOSIONS)
See NUCLEAR EXPLOSION DETECTION
DETONATIONS
Image Processing
Detonation cellular structure and image processing, 11:38755 (R;US)
Measuring Methods
Detonation cellular structure and image processing, 11:38755 (R;US)
DEUTERIUM
Adsorption
Retention of deuterium and tritium in Papyex graphite, 11:38448 (J;NL)
Retention of deuterium and tritium in POCO AXF-5Q graphite, 11:38445 (J;US)
Diffusion
Retention of deuterium and tritium in POCO AXF-5Q graphite, 11:38445 (J;US)
Isotopic Exchange
Real-time experimental measurements of isotopic exchange between gaseous hydrogen and palladium hydride powder, 11:38494 (R;US)
Laser Implosions
High—aspect-ratio laser-fusion targets driven by 24-beam uv laser radiation, 11:39379 (J;US)
Polarization
Nuclear spin polarization of solid deuterium—tritium, 11:39390 (J;US)
Spin Orientation
Nuclear spin polarization of solid deuterium—tritium, 11:39390 (J;US)
Trapping
Trapping of deuterium in oxygen-implanted aluminum, 11:39363 (R;US)
DEUTERIUM COMPOUNDS
Isotope Effects
Measurement of the rotational spectrum of OH^+ and OD^+ by laser magnetic resonance, 11:38504 (BA;US)
Magnetic Resonance
Measurement of the rotational spectrum of OH^+ and OD^+ by laser magnetic resonance, 11:38504 (BA;US)

DEUTERIUM TARGET
Nucleon Reactions
Three-particle systems at low and intermediate energies, 11:39211 (R;CA)
Pion Reactions
Three-particle systems at low and intermediate energies, 11:39211 (R;CA)
DEUTERON BEAMS
Beam Production
Lamb-shift sources: hopes and realities, 11:38708 (J;US)

EINSTEINIUM 254 TARGET
Heavy Ion Fusion Reactions
Leap to explore the region of neutron-rich heavy element isotopes, 11:39253 (R;US)
ELASTIC SCATTERING
Quantization
Second quantization techniques in the scattering of nonidentical composite bodies, 11:39203 (R;US)
ELASTOMERS
See also POLYISOPRENE
Deformation
Nonlinear analysis of the inflation of an initially flat, circular, elastic disk, 11:38397 (J;US)
ELECTRIC APPLIANCES
Energy Efficiency Standards
Virginia Electric and Power Company. Financial impacts on utilities of load shape changes project: stage III summary report, 11:38159 (R;US)
Thermostats
Electronic regulated hot plate, 11:38196 (R;DK;In Danish)
ELECTRIC ARCS
Ion Beams
Generation and measurements of ion species from vacuum arcs, 11:38656 (J;US)
ELECTRIC BATTERIES
Devices for production and/or storage of electrical energy from chemical reactions; excludes FUEL CELLS and RADIOISOTOPE BATTERIES.
Electrolytes
Calcium/thionyl chloride battery technology. Final report, February 1982-June 1985, 11:38072 (R;US)
Optimization
Calcium/thionyl chloride battery technology. Final report, February 1982-June 1985, 11:38072 (R;US)
ELECTRIC CONDENSERS
See CAPACITORS
ELECTRIC CONTROLLERS
Energy Efficiency
Improving the selection and efficient use of electric-motor drive systems, 11:38194 (R;US)
ELECTRIC MOTORS
Energy Efficiency
Improving the selection and efficient use of electric-motor drive systems, 11:38194 (R;US)
ELECTRIC POTENTIAL
Elliptical Configuration
Scalar potential for charge distributions with ellipsoidal symmetry, 11:39289 (R;US)
ELECTRIC POWER
Cost
Impact of different power consumer groups on the total power supply cost, 11:38206 (R;FI;In Finnish)
Energy Consumption
Impact of different power consumer groups on the total power supply cost, 11:38206 (R;FI;In Finnish)
Load Management
Electric power demand of the industry - means of controlling the loads, 11:38129 (R;SE;In Swedish)
Marketing
Marketing electricity to industrial consumers: a study of Pacific Northwest industries, 11:38111 (R;US)
Metering
Application of model based sample design for the Pacific end-use metering project, 11:38118 (RA;US)
Data acquisition and management, 11:38124 (RA;US)
Data verification in end-use metering, 11:38125 (RA;US)
ELCAP: measurement plans and equipment installation, 11:38121 (RA;US)
ELCAP instrumentation, 11:38120 (RA;US)
Instrumentation and data collection, 11:38122 (RA;US)
Supply and Demand
Impact of different power consumer groups on the total power supply cost, 11:38206 (R;FI;In Finnish)
ELECTRIC POWER INDUSTRY
Air Pollution Abatement
Utility FGD [flue gas desulfurization] survey, October-December 1984. Project summary, 11:37839 (R;US)
Research Programs
Issues in electric energy systems: a review of the DOE (Department of Energy) R and D program. Final report, 11:38130 (R;US)
ELECTRIC POWER RESEARCH INSTITUTE
See EPRI
ELECTRIC POWER SYSTEMS
See POWER SYSTEMS
ELECTRIC PROBES
See also LANGMUIR PROBE
Data Analysis
Electric probes in plasmas, 11:39326 (J;US)
Design
Electric probes in plasmas, 11:39326 (J;US)
Operation
Electric probes in plasmas, 11:39326 (J;US)
ELECTRIC UTILITIES
Air Pollution Abatement
Meeting atmospheric-modeling requirements for utility data, 11:38815 (R;US)
Data Compilation
Cost trends for electric power generation 1979-1984, 11:38131 (R;US)
Energy Conservation
Effect of conservation programs on electric utility earnings: results of two case studies, 11:38128 (R;US)
Environmental Impact Statements
Direct service industry options. Final enrivonmental impact statement, 11:38922 (R;US)
Income
Effect of conservation programs on electric utility earnings: results of two case studies, 11:38128 (R;US)
Load Analysis
Application of model based sample design for the Pacific end-use metering project, 11:38118 (RA;US)
Commercial hourly end-use study at Seattle City Light, 11:38116 (RA;US)
Commercial building recruitment for the end-use load and conservation assessment program, 11:38123 (RA;US)
Data acquisition and management, 11:38124 (RA;US)
Data needs for end-use planning in the commercial sector, 11:38113 (RA;US)
Data verification in end-use metering, 11:38125 (RA;US)
Description of Sierra Pacific Power activities, 11:38114 (RA;US)
ELCAP: measurement plans and equipment installation, 11:38121 (RA;US)
ELCAP instrumentation, 11:38120 (RA;US)
Instrumentation and data collection, 11:38122 (RA;US)
Issues and approaches for designing commercial building samples, 11:38119 (RA;US)
Review of the current status of commercial end-use load shape data, 11:38117 (RA;US)
Load Management
Design of load-control experiments for the Athens Automation and Control Experiment, 11:38127 (R;US)
LOADSIM version 2: program documentation and user's manual. Revision 2, 11:38112 (R;US)
Natural gas fired combined cycle generators: Dominant solutions in capacity planning[1], 11:38132 (J;US)
Management
Managing the nuclear utility, 11:38133 (J;US)
PCB spill response and cleanup results, 11:37450 (RA;US)
Pursuit of excellence: Canada's successful CANDU program, 11:37935 (J;US)
Search for excellence: a progress report from the Swedish State Power Board, 11:37977 (J;US)
Transformer/Capacitor Risk Management Model: TRIM, 11:38093 (RA;US)

Peak Load
Pacific Gas and Electric Company. Financial impacts on utilities of load shape changes project. Stage II technical report, 11:38207 (R;US)
Planning
Department of Energy least-cost utility planning research agenda, 11:39430 (R;US)
Description of Sierra Pacific Power activities, 11:38114 (RA;US)
Natural gas fired combined cycle generators: Dominant solutions in capacity planning[1], 11:38132 (J;US)
PCB removals - options and implementation, 11:37448 (RA;US)
PCB spill response and cleanup results, 11:37450 (RA;US)
Transformer/Capacitor Risk Management Model: TRIM, 11:38093 (RA;US)
Reactor Operation
Search for excellence: a progress report from the Tokyo Electric Power Company, 11:37976 (J;US)
Regulations
Description of Sierra Pacific Power activities, 11:38114 (RA;US)
Research Programs
Issues in electric energy systems: a review of the DOE (Department of Energy) R and D program. Final report, 11:38130 (R;US)

ELECTRICAL EQUIPMENT
See also ANTENNAS
CAPACITORS
CIRCUIT BREAKERS
INVERTERS
TRANSFORMERS
Quality Assurance
Integrating environmental qualification requirements into normal plant operations, 11:38000 (J;US)

ELECTRIC-POWERED VEHICLES
Forecasting
Energy consumption in the transportation services sector. Final report, 11:38188 (R;US)

ELECTROCATALYSTS
Structural Chemical Analysis
Structure and activity of Pt-Co alloys as oxygen reduction electrocatalysts, 11:38139 (R;US)

ELECTROCHEMICAL CELLS
See also ELECTRIC BATTERIES
FUEL CELLS
Anodes
Flow cytometric measurement of total DNA and incorporated halodeoxyuridine, 11:38075 (P;US)
Cathodes
Flow cytometric measurement of total DNA and incorporated halodeoxyuridine, 11:38075 (P;US)
Corrosion Protection
Flow cytometric measurement of total DNA and incorporated halodeoxyuridine, 11:38075 (P;US)
Research Programs
Development of regenerable energy storage for space multimegawatt applications, 11:38063 (R;US)

ELECTRODES
See also CATHODES
Electrochemistry
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)
Performance
Electrode configuration influence on resistivity measurements about a spherical anomaly, 11:38997 (J;US)
Surface Properties
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)
Surface Treatments
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)

ELECTROLYTES
Sorptive Properties
Functional pendent groups affecting chemisorption and adherent properties of polyelectrolyte-zinc phosphate composite conversion coatings, 11:38227 (R;US)

ELECTROLYTIC CELLS
Electrolytes
Calcium/thionyl chloride battery technology. Final report, February 1982-June 1985, 11:38072 (R;US)

ELECTROMAGNETIC PUMPS
Design
Design of liquid lithium pumps for FMIT, 11:39426 (BA;GB)
Leaks
Examination and replacement of electromagnetic pumps from FFTF primary circuits, 11:38015 (J;US)

ELECTROMAGNETIC RADIATION
See also BLACKBODY RADIATION
LASER RADIATION
MICROWAVE RADIATION
RADIOWAVE RADIATION
ULTRAVIOLET RADIATION
X RADIATION
Calibration
Operation Castle. Project 7.1. Electromagnetic radiation calibration, Pacific {roving ground. Report for March-May 1954, 11:38775 (R;US)
Production
Experimental study of millimeter wave generation from rotating electron beams in a rippled magnetic field, 11:38616 (BA;US)
Wave Propagation
Mean power reflection from a one-dimensional nonlinear random medium, 11:39292 (J;US)

ELECTROMAGNETIC SURVEYS
Tomography
Recent experiments using geophysical tomography in fractured granite, 11:38995 (J;US)

ELECTROMAGNETIC WAVES
See ELECTROMAGNETIC RADIATION

ELECTRON ACCEPTOR
See ELECTRONS

ELECTRON BEAM INDUCED CURRENT

ENVIRONMENT
Research Programs
Inventory of current environmental monitoring projects in the US-Canadian transboundary region, 11:38101 (R;US)

ENVIRONMENTAL EFFECTS
This descriptor is to be used only when the actual effects on the environment are discussed.
Remote Sensing
Remote sensing to detect ecological impacts associated with acid deposition. Final report, 11:38879 (R;US)

ENVIRONMENTAL EXPOSURE PATHWAY
M Codes
Intruder dose pathway analysis for the onsite disposal of radioactive wastes: the ONSITE/MAXI1 computer program. Supplement No. 1, 11:37653 (R;US)
Mathematical Models
Environmental pathway models for estimating population health effects from disposal of high-level radioactive waste in geologic repositories. Final report, 11:37649 (R;US)
O Codes
Intruder dose pathway analysis for the onsite disposal of radioactive wastes: the ONSITE/MAXI1 computer program. Supplement No. 1, 11:37653 (R;US)

ENVIRONMENTAL IMPACTS
This descriptor is to be used to describe the possible effects on the environment from a proposed project.
Computer Codes
Program and data description for the environment model, 11:38801 (R;DK)

ENVIRONMENTAL MATERIALS
Use only for unspecified samples from the environment. See also specific environmental materials.
Multi-Element Analysis
Trace element analysis of the heavy metals lead, cadmium and thallium in water and samples of organic matter using mass spectroscopy and isotope dilution analysis, 11:38897 (R;DE;In German)

ENVIRONMENTAL POLICY
Use of energy scenarios in addressing the CO_2 question, 11:38096 (J;US)
Economic Impact
Regional forecasting with the statistical analysis system (MAPEs), 11:38085 (R;US)
Environmental Impacts
Regional forecasting with the statistical analysis system (MAPEs), 11:38085 (R;US)
Program Management
Environmental Program Plan, 11:38088 (R;US)

ENVIRONMENTAL PROTECTION AGENCY

FERRITE GARNETS
Optical Properties
Measurements of losses and lasing efficiency in Nd:Cr:GSGG laser rods, 11:38608 (BA;US)
Optical properties of $Cr^{3}+$ and $Nd^{3}+$ions in GGG(Ca,Zr) and GGG(Ca,Mg,Zr), 11:38611 (BA;US)
Spectroscopic and thermomechanical properties of new neodymium-doped laser materials, 11:38607 (BA;US)
Strengthening of solid-state laser materials, 11:38606 (BA;US)
Physical Radiation Effects
Measurements of losses and lasing efficiency in Nd:Cr:GSGG laser rods, 11:38608 (BA;US)
Spectroscopic and thermomechanical properties of new neodymium-doped laser materials, 11:38607 (BA;US)
Strengthening of solid-state laser materials, 11:38606 (BA;US)
FERRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Sorptive Properties
Peats and ferrites for heavy metal removal, 11:37622 (R;US)
FERRITIC STEELS
Aging
Predicted irradiation effects on alloy aging kinetics, 11:37894 (BA;US)
Corrosion
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
Low Dose Irradiation
Predicted irradiation effects on alloy aging kinetics, 11:37894 (BA;US)
Physical Radiation Effects
Predicted irradiation effects on alloy aging kinetics, 11:37894 (BA;US)
FERROMAGNETIC MATERIALS
Ising Model
Comparative Monte Carlo and mean-field studies of random-field Ising systems, 11:39286 (J;US)
FERTILIZER INDUSTRY
Industrial Wastes
Validity of effluent and ambient toxicity tests for predicting biological impact, Skeleton Creek, Enid, Oklahoma, 11:38899 (R;US)
FESHBACH-PORTER-WEISSKOPF MODEL
See OPTICAL MODELS
FETUSES
Radionuclide Kinetics
Placental transfer of iodine and iodine compounds, 11:38947 (R;DE;In German)
FFTF REACTOR
Westinghouse Hanford Company, Richland, Washington
After-Heat Removal
Calculational tracking of decay heat for FFTF assemblies, 11:38014 (J;US)
Failed Element Detection
Breached fuel location in FFTF by delayed neutron monitor triangulation, 11:38013 (J;US)
Primary Coolant Circuits
Examination and replacement of electromagnetic pumps from FFTF primary circuits, 11:38015 (J;US)
FIBER OPTICS
Stainless Steel-20-25
Fiber optics in subsea control systems, 11:38674 (RA;NO)
Uses
Measurements of oil concentrations with fiberoptical transmittance meters at Haltenbanken June 1985, 11:37477 (R;NO)
FIBERGLASS
Joints
Fatigue tests of adhesively bounded joints between steel and glass fiber laminates, 11:38391 (R;DK;In Danish)
FIELD EMISSION MICROSCOPY
See ION MICROSCOPY
FIELD ION MICROSCOPY
See ION MICROSCOPY
FIELD PRODUCTION EQUIPMENT
Reliability
Computer simulation program for reliability assessment of subsea oil/gas well cluster, 11:37407 (RA;NO)
FIELD TESTS
Fires
Measurement of air pollution and other factors relating to the practice of straw and stubble burning, 11:38803 (R;US)
FIELDS (MAGNETIC)
See MAGNETIC FIELDS
FILAMENTS
Fabrication
Fabrication of V-type filaments for surface ionization mass spectrometry, 11:38749 (J;NE)
FILLING STATIONS
See GASOLINE SERVICE STATIONS
FILM BOILING
Heat Transfer
Evaluation of convective film boiling models with nonequilibrium data in tubes, 11:38624 (R;US)
Mathematical Models
Evaluation of convective film boiling models with nonequilibrium data in tubes, 11:38624 (R;US)
FILM COOLING
Mathematical Models
Heat transfer measurements with film cooling on a turbine blade profile in cascade, 11:38632 (J;IT)
FILM FLOW
Heat Transfer
Methods to improve heat transfer in falling film evaporators, 11:37832 (R;FI;In Finnish)
FINGERPRINTING (OIL SPILLS)
See OIL SPILLS
FINLAND
Energy Supplies
Optimization model for the Finnish energy supply system - KETO. General description, 11:38106 (R;FI)
Solar Cell Arrays
Photovoltaic module performance in Finland, part 1, 11:37747 (R;FI;In Finnish)
FIRE FIGHTING
Planning
Fire prevention and control in connection with production and handling of peat, 11:37349 (RA;SE)
FIRE STATIONS
See PUBLIC BUILDINGS
FIREDAMP
See METHANE
FIRES
Air Pollution
Measurement of air pollution and other factors relating to the practice of straw and stubble burning, 11:38803 (R;US)
Alarm Systems
Safe production and use of domestic fuels, part 2. Fire detectors, 11:37346 (R;FI;In Finnish)
Detection
Safe production and use of domestic fuels, part 2. Fire detectors, 11:37346 (R;FI;In Finnish)
Environmental Effects
Immediate effects of prescribed burning on mineral soil nitrogen in ponderosa pine of New Mexico, 11:38860 (J;US)
Temperature Distribution
New temperature correlation for forced-ventilated compartment fires, 11:38831 (R;US)
FIREWOOD
See WOOD FUELS
FIRST WALL
Interactions
Study of plasma convection and wall interactions in magnetic confinement systems. Final report, December 1, 1984-February 28, 1986, 11:39311 (R;US)
Sputtering
Simulations of Tokamak sputtering conditions with high energy particle beams, 11:39413 (BA;US)

Trapping
Trapping of deuterium in oxygen-implanted aluminum, 11:39363 (R;US)
FISH LADDERS
See FISH PASSAGE FACILITIES
FISH LIFTS
See FISH PASSAGE FACILITIES
FISH LOCKS

FLAT PLATE COLLECTORS
Performance
Effect of infrared irradiance on collector thermal performance, 11:37805 (BA;US)
Performance Testing
Conclusions and recommendations for the testing of flat-plate solar collector thermal performance and durability, 11:37802 (BA;US)
Service Life
Conclusions and recommendations for the testing of flat-plate solar collector thermal performance and durability, 11:37802 (BA;US)
Thermal Efficiency
Effect of infrared irradiance on collector thermal performance, 11:37805 (BA;US)
FLOW MODELS
Nonlinear Problems
Shape selection of Saffman-Taylor fingers, 11:39119 (J;US)
Sensitivity Analysis
Proposal for a test problem for HYDROCOIN Level 3 Case 2. Sensitivity analysis for deep disposal in partially saturated, fractured tuff, 11:37644 (R;US)
FLOW RATE
Stochastic Processes
Generalization of one-dimensional solute transport. A stochastic-convective flow conceptualization, 11:38888 (R;US)
FLOWMETERS
Performance
Active ultrasonic cross-correlation flowmeters for mixed-phase pipe flows, 11:38635 (J;US)
FLUE GAS
Air Pollution Monitoring
Environmental assessment of an enhanced-oil-recovery steam generator equipped with an EPA (Environmental Protection Agency) heavy oil low-NOx burner. Volume 2. Data supplement. Final report, January 1984-January 1985, 11:38666 (R;US)
Chemical Composition
Emissions from wood and peat fired district heating plants, 11:37836 (R;FI;In Finnish)
Reduction of environmental consequences in space heating by using pellet burning technology, 11:37305 (RA;SE)
Cleaning
Final report on the development project Flue Gas Cleaning, 11:38679 (R;DK;In Danish)
Denitrification
Chemistry of a flue gas combined NO/sub x/ and SO_2 scrubber employing ferrous cysteine additives, 11:37312 (R;US)
Evaluation of the NOXSO combined NO/sub x/SO_2 flue gas treatment process, 11:38797 (R;US)
Removal of sulfur and nitrogen containing pollutants from discharge gases, 11:37314 (P;US)
Desulfurization
Chemistry of a flue gas combined NO/sub x/ and SO_2 scrubber employing ferrous cysteine additives, 11:37312 (R;US)
Evaluation of the NOXSO combined NO/sub x/SO_2 flue gas treatment process, 11:38797 (R;US)
Removal of SO_2 from simulated flue gas by magnesia spray absorption: parameters affecting removal efficiency and products, 11:38832 (J;US)
Removal of sulfur and nitrogen containing pollutants from discharge gases, 11:37314 (P;US)

Utility FGD [flue gas desulfurization] survey, October-December 1984. Project summary, 11:37839 (R;US)
Utilization of by-product from the wet-dry flue gas desulfurization method, 11:38828 (R;SE;In Swedish)
FLUIDIZED BED REACTORS
Heat Transfer
Thermal-hydraulic and neutronic interaction in the rotating bed reactor, 11:37949 (J;US)
Hydraulics
Thermal-hydraulic and neutronic interaction in the rotating bed reactor, 11:37949 (J;US)
Reactor Kinetics
Thermal-hydraulic and neutronic interaction in the rotating bed reactor, 11:37949 (J;US)
FLUIDIZED-BED COMBUSTION
Commercialization
Atmospheric fluidized-bed combustion. Technology status report, 11:37370 (R;US)
Data Base Management
Atmospheric fluidized-bed combustion. Technology status report, 11:37370 (R;US)
Demonstration Plants
Atmospheric fluidized-bed combustion. Technology status report, 11:37370 (R;US)
Drying
Production of hot gas for drying processes using fluidised bed combustion of coal. Final report, 11:38195 (R;DE)
Power Generation
Pressurized fluidized bed combustion, 11:38536 (R;FI;In Finnish)
Research Programs
Pressurized fluidized bed combustion, 11:38536 (R;FI;In Finnish)
Technology Assessment
Atmospheric fluidized-bed combustion. Technology status report, 11:37370 (R;US)
Waste Heat Utilization
Production of hot gas for drying processes using fluidised bed combustion of coal. Final report, 11:38195 (R;DE)
FLUIDIZED-BED COMBUSTORS
Computerized Simulation
Computed and experimental bubbles in a cold bed model of a fluidized-bed combustor, 11:37376 (BA;US)
Design
Atmospheric fluidized-bed combustion. Technology status report, 11:37370 (R;US)
Erosion
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
Flow Models
Computed and experimental bubbles in a cold bed model of a fluidized-bed combustor, 11:37376 (BA;US)
Fluid Mechanics
Computed and experimental bubbles in a cold bed model of a fluidized-bed combustor, 11:37376 (BA;US)
Materials
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
Performance
Atmospheric fluidized-bed combustion. Technology status report, 11:37370 (R;US)

FREQUENCY SELECTION
Light-weight hydrogen maser. Final report, March 1979-July 1984, 11:38577 (R;US)

FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

FTR REACTOR (RICHLAND)
See FFTF REACTOR

FUEL ASSEMBLIES
Burnup
GEDEON 1: a first interpretation of a benchmark experiment for UO_2-Gd_2O_3 depletion in PWR assemblies, 11:37926 (J;US)
Gadolinium Oxides
GEDEON 1: a first interpretation of a benchmark experiment for UO_2-Gd_2O_3 depletion in PWR assemblies, 11:37926 (J;US)
Use of gadolinium in PWR cores: the effects on local power and on nodal normalization, 11:37924 (J;US)
Use of UO_2-Gd_2O_3 in very low leakage, extended burnup fuel cycles, 11:37923 (J;US)
Utilization of gadolinium burnable poison for reactivity control of pressurized water reactors, 11:37925 (J;US)
Standards
Fast breeder reactor fuel assembly, 11:37940 (R;US)
Fuel and control assembly tag gas, 11:37939 (R;US)
Uranium Dioxide
GEDEON 1: a first interpretation of a benchmark experiment for UO_2-Gd_2O_3 depletion in PWR assemblies, 11:37926 (J;US)

FUEL CELL CATALYSTS
See ELECTROCATALYSTS

FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Trace contaminant removal from hot coal gas for molten carbonate fuel cell application. Final report, 11:38137 (R;US)

FUEL CELLS
Cathodes
Structure and activity of Pt-Co alloys as oxygen reduction electrocatalysts, 11:38139 (R;US)
Electrodes
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)
Performance
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)
Research Programs
Development of regenerable energy storage for space multimegawatt applications, 11:38063 (R;US)
Uses
Application of fuel cells to chlorine-caustic technology, 11:38141 (R;US)
Marine applications for fuel-cell technology. Technical memo, 11:38140 (R;US)
Potentials for fuel cells in refineries and chlor-alkali plants, 11:38138 (R;US)

FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE

FUEL CYCLE CENTERS
Accidents
Material transport models for accident-induced flow in nuclear fuel cycle facilities, 11:37658 (J;US)

FUEL ECONOMY
Driver energy conservation awareness training. Review and recommendations for a national program, 11:38190 (R;US)

FUEL ELEMENTS
See also FUEL PINS
FUEL RODS
Gadolinium Oxides
Gadolinia fuel performance in BWRs, 11:37885 (J;US)

FUEL FEEDING SYSTEMS
Design
Constructional solutions of fuel handling equipment needed in heating plants using domestic fuel, 11:37357 (R;FI;In Finnish)
Field Tests
Constructional solutions of fuel handling equipment needed in heating plants using domestic fuel, 11:37357 (R;FI;In Finnish)

FUEL GAS
See also HIGH BTU GAS
NATURAL GAS
Chemical Properties
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)
Combustion
Short communication on the reaction zone thickness of premixed laminar flames, 11:38540 (J;US)
Technical development in order to obtain satisfactory combustion, 11:37262 (RA;SE)
Hot Gas Cleanup
Potential benefits of improved mass transfer in SSMS hot gas cleanup, 11:37276 (R;US)
Monitoring
Photofragment fluorescence as a sensitive probe for gas-phase alkali compounds and their photochemistry, 11:37331 (BA;US)
Physical Properties
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)
Toxicity
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)

FUEL INJECTION SYSTEMS
Design
Investigation of diesel fuel injection equipment response to coal slurry fuels, 11:37377 (J;US)

Flow Visualization
Dual-orifice atomizer performance under varying air density conditions, 11:38668 (J;IT)
Performance Testing
Investigation of diesel fuel injection equipment response to coal slurry fuels, 11:37377 (J;US)
Service Life
Investigation of diesel fuel injection equipment response to coal slurry fuels, 11:37377 (J;US)

FUEL LOADING
See REACTOR FUELING

FUEL OILS
See also HEATING OILS
Ignition
Compression ignition of coal slurry fuels, 11:38212 (R;US)
Toxicity
Evaluating ecosystem response to toxicant stress: a state space approach, 11:37328 (R;US)

FUEL PELLETS
Accelerators
Hydrogen pellet acceleration with a two-stage system consisting of a gas gun and a fuseless electromagnetic railgun, 11:39388 (J;US)
Dusts
Dustfalls in peat production and the utilization of peat, 11:37326 (RA;SE)

FUEL PENCILS
See FUEL PINS

FUEL PINS
Design
Use of a PDQ-8 depletion method for high-speed design accuracy, 11:37920 (J;US)
Power Distribution
Use of a PDQ-8 depletion method for high-speed design accuracy, 11:37920 (J;US)

FUEL REPROCESSING PLANTS
See also IDAHO CHEMICAL PROCESSING PLANT
Accounting
Sequential analysis of materials balances. Application to a prospective reprocessing facility, 11:37670 (R;US)
Material Balance
Sequential analysis of materials balances. Application to a prospective reprocessing facility, 11:37670 (R;US)

FUEL RODS
Performance
BWR fuel rod performance evaluation program. Final report, 11:37858 (R;US)

FUEL SLUGS
See FUEL RODS

FUEL SLURRIES
Additives
The effect of surface active additives on coal/water slurry rheology, 11:37299 (BA;US)
Centrifugation
Dewatering dilute fine coal/water slurries to produce coal/water fuel, 11:37354 (R;US)
Combustion
Investigation of diesel fuel injection equipment response to coal slurry fuels, 11:37377 (J;US)
Optical particle counting, sizing, and velocimetry using intensity deconvolution, 11:37380 (J;US)
The combustion characteristics of coal slurry fuels in diesel engines: Detailed measurements and analysis, 11:37378 (J;US)
Fuel Additives
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Ignition
Compression ignition of coal slurry fuels, 11:38212 (R;US)
PH Value
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Production
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Rheology
The effect of surface active additives on coal/water slurry rheology, 11:37299 (BA;US)
Stability
The effect of surface active additives on coal/water slurry rheology, 11:37299 (BA;US)
Viscosity
Physical beneficiation process and costs refinement for coal-water slurry manufacture. Final technical report, September 1984-December 1985, 11:37355 (R;US)
Water Removal
Dewatering dilute fine coal/water slurries to produce coal/water fuel, 11:37354 (R;US)

FUEL SUSPENSIONS
See FUEL SLURRIES

FUEL-AIR RATIO
Control
Control of fuel-air ratio in pulverized fuel burners, 11:37373 (R;SE;In Swedish)
Mathematical Models
Semiempirical analysis of fuel-air ratio distribution downstream of a plain orifice injector under nonuniform crossflow, 11:38216 (J;IT)

FUELS
See also AUTOMOTIVE FUELS
AVIATION FUELS
BOILER FUELS
FOSSIL FUELS
FUEL SLURRIES
GAS FUELS
JET ENGINE FUELS
LIQUID FUELS
NUCLEAR FUELS
REFUSE DERIVED FUELS
SOLID FUELS
SYNTHETIC FUELS
WOOD FUELS
Combustion
Reaction intermediates in aromatic-fuel combustion. Final report, 18 July 1984-17 July 1985, 11:37482 (R;US)

FUELS (NUCLEAR)
See NUCLEAR FUELS

FUELWOOD
See WOOD FUELS

FUKUSHIMA-4 REACTOR
Okuma, Fukushima, Japan
Reactor Cores
Experience with single control rod pattern operation in axially two-zoned fuel cores, 11:37890 (J;US)

FUKUSHIMA-II-2 REACTOR
Naraha, Fukushima, Japan
Performance
Operating experience with axially two-zoned initial fuel core, 11:37889 (J;US)
Primary Coolant Circuits
Evaluation of ^{58}Co behavior of an iron crud suppressed BWR, 11:37878 (J;US)
Water chemistry experience in current low-crud boiling water reactors, 11:37877 (J;US)
Reactor Cores
Operating experience with axially two-zoned initial fuel core, 11:37889 (J;US)

FULL-SERVE STATIONS
See GASOLINE SERVICE STATIONS

FUME HOODS
Manuals
Technical manual: hood system capture of process fugitive particulate emissions. Final report, September 1983-September 1985, 11:38818 (R;US)

FUMES
See AEROSOLS

FUNGI
Comparative Evaluations
Biodegradation and bioconversion of coals by fungi. Quarterly progress report No. 3, April 1-June 30, 1986, 11:37271 (R;US)

FURANS
Chemical Analysis
Performance of RCRA (Resource Conservation and Recovery Act) Method 8280 for the analysis of dibenzo-p-dioxins and dibenzofurans in hazardous-waste samples, 11:38095 (R;US)
FURNACE OIL
See HEATING OILS
FURNACES
See also GAS FURNACES
WOOD BURNING FURNACES
Construction
Construction, operation and optimisation of a furnace for the economic burning of low calorific value gases. Final report, 11:38663 (R;DE)
Design
PCB incinerator using molten glass both as heat source, 11:37843 (RA;US)
Operation
Construction, operation and optimisation of a furnace for the economic burning of low calorific value gases. Final report, 11:38663 (R;DE)
FUSED SALTS
See MOLTEN SALTS
FUSION ENERGY
See THERMONUCLEAR REACTORS
FUSION (NUCLEAR)

G

GADOLINIUM 144
Energy-Level Transitions
Search for superdeformation effects in ^{144}Gd, 11:39238 (J;US)
Nuclear Deformation
Search for superdeformation effects in ^{144}Gd, 11:39238 (J;US)
GADOLINIUM 154 TARGET
Electron Reactions
Inelastic electron scattering from collective levels of ^{154}Gd, 11:39243 (J;US)
GADOLINIUM COMPOUNDS
See also GADOLINIUM OXIDES
Defects
Fracture of solid state laser slabs, 11:38585 (J;US)
Fractures
Fracture of solid state laser slabs, 11:38585 (J;US)
Stresses
Fracture of solid state laser slabs, 11:38585 (J;US)
GADOLINIUM OXIDES
Performance
Gadolinia fuel performance in BWRs, 11:37885 (J;US)
Use of gadolinium in PWR cores: the effects on local power and on nodal normalization, 11:37924 (J;US)
Use of UO_2-Gd_2O_3 in very low leakage, extended burnup fuel cycles, 11:37923 (J;US)
Utilization of gadolinium burnable poison for reactivity control of pressurized water reactors, 11:37925 (J;US)
GAGES (PRESSURE)
See PRESSURE GAGES
GALACTURONIC ACID
Chemical Composition
Host-pathogen interactions. XXIX. Oligogalacturonides released from sodium polypectate by endopolygalacturonic acid lyase are elicitors of phytoalexins in soybean (Glycine max L.), 11:38925 (J;US)
GALAXIES
See also SEYFERT GALAXIES
Age Estimation
General constraints on the age and chemical evolution of the Galaxy, 11:39018 (R;US)
Mathematical Models
General constraints on the age and chemical evolution of the Galaxy, 11:39018 (R;US)
Nucleosynthesis
General constraints on the age and chemical evolution of the Galaxy, 11:39018 (R;US)
GALAXY CLUSTERS
Correlation Functions
Two-point correlation for rich clusters of galaxies, 11:39048 (J;US)
GALLIUM
Chemical Reaction Yield
Production of gallium atoms by excimer laser photolysis of trimethylgallium, 11:38523 (BA;US)
GALLIUM 68
Radioisotope Generators
Preparation of gallium-68 radiopharmaceuticals for positron tomography. Progress report, November 1, 1983-May 31, 1986, 11:38937 (R;US)
Tissue Distribution
Preparation of gallium-68 radiopharmaceuticals for positron tomography. Progress report, November 1, 1983-May 31, 1986, 11:38937 (R;US)
GALLIUM 80
Energy Levels
Half-life of ^{80}Zn: The first measurement for an r-process waiting-point nucleus, 11:39236 (J;US)
GALLIUM ALLOYS
Deposition
Loss of Ga in sputtered deposits made from a Pu-4 at. % Ga alloy, 11:38324 (J;US)
Epitaxy
Ordered structures in GaAs/sub 0.5/Sb/sub 0.5/ alloys grown by organometallic vapor phase epitaxy, 11:38428 (J;US)
Sputtering
Loss of Ga in sputtered deposits made from a Pu-4 at. % Ga alloy, 11:38324 (J;US)
GALLIUM ARSENIDE SOLAR CELLS
Research Programs
AlGaAs-GaAs patterned Ge tunnel junction cascade concentrator solar cell. Annual subcontract report, 15 October 1984-14 October 1985, 11:37740 (R;US)
GALLIUM ARSENIDES
Annealing
Gallium arsenide photocathode for the free electron laser, 11:38602 (BA;US)
Charged-Particle Transport
Diffusion dynamics of holes in In/sub x-italic/Ga/sub 1-//sub x-italic/As/GaAs strained-layer superlattices, 11:38420 (J;US)
Electrical transport of holes in GaAs/InGaAs/GaAs single strained quantum wells, 11:38424 (J;US)
Chemical Composition
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Damage
Intervalence-band absorption saturation and optically induced damage of GaAs by pulsed CO_2 laser radiation, 11:38456 (BA;US)
Dislocations
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Distributions of residual stress, dislocations, and EL2 in Czochralski-grown semi-insulating GaAs, 11:38421 (J;US)
Electrical Properties
Photocurrent spectroscopy of a strained-layer superlattice, 11:38468 (J;GB)
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Electron Diffraction
Quantitative analysis of streaks in reflection high-energy electron diffraction: GaAs and AlAs deposited on GaAs(001), 11:38425 (J;US)

Electronic Structure
Metal-derived band gap states: Ti on GaAs(110), 11:38442 (J;US)
Emission
Absorption measurements at high pressure (0-10 kbar) on strained superlattices, 11:38467 (J;GB)
Energy Gap
Band-gap shifts in heavily doped n-type GaAs, 11:38426 (J;US)
Energy-Level Transitions
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)
Energy-Loss Spectroscopy
Analysis of semiconductor EELS in the low-loss regime, 11:38407 (R;US)
Epitaxy
Ordered structures in GaAs/sub 0.5/Sb/sub 0.5/ alloys grown by organometallic vapor phase epitaxy, 11:38428 (J;US)
Etching
Laser-induced photochemical dry etching of III-V compound semiconductors, 11:38452 (BA;US)
Holes
Electrical transport of holes in GaAs/InGaAs/GaAs single strained quantum wells, 11:38424 (J;US)
Interfaces
Metal-derived band gap states: Ti on GaAs(110), 11:38442 (J;US)
Ion Implantation
Zinc-implantation-disordered (InGa)As/GaAs strained-layer superlattice diodes, 11:38416 (J;US)
Laser-Radiation Heating
Intervalence-band absorption saturation and optically induced damage of GaAs by pulsed CO_2 laser radiation, 11:38456 (BA;US)
Luminescence
Band-gap shifts in heavily doped n-type GaAs, 11:38426 (J;US)
Morphology
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Optical Properties
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Oxidation
Gallium arsenide photocathode for the free electron laser, 11:38602 (BA;US)
Photochemistry
Laser-induced photochemical dry etching of III-V compound semiconductors, 11:38452 (BA;US)
Photocurrents
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)
Physical Radiation Effects
Intervalence-band absorption saturation and optically induced damage of GaAs by pulsed CO_2 laser radiation, 11:38456 (BA;US)
Investigation of the basic mechanisms of radiation effects on electronic materials and devices and development of hardening techniques. Volume 1. Technical report, 1 January 1982-1 January 1983, 11:38734 (R;US)
Laser-induced photochemical dry etching of III-V compound semiconductors, 11:38452 (BA;US)
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Zinc-implantation-disordered (InGa)As/GaAs strained-layer superlattice diodes, 11:38416 (J;US)
Radiation Hardening
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
Residual Stresses
Distributions of residual stress, dislocations, and EL2 in Czochralski-grown semi-insulating GaAs, 11:38421 (J;US)
Roughness
Quantitative analysis of streaks in reflection high-energy electron diffraction: GaAs and AlAs deposited on GaAs(001), 11:38425 (J;US)
Superlattices
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)
Diffusion dynamics of holes in In/sub x-italic/Ga/sub 1-//sub x-italic/As/GaAs strained-layer superlattices, 11:38420 (J;US)
Visible Spectra
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)
Work Functions
Gallium arsenide photocathode for the free electron laser, 11:38602 (BA;US)

GALLIUM COMPOUNDS
See also GALLIUM ARSENIDES
GALLIUM PHOSPHIDES
GALLIUM SELENIDES
GALLIUM SULFIDES
Photolysis
Production of gallium atoms by excimer laser photolysis of trimethylgallium, 11:38523 (BA;US)

GALLIUM PHOSPHIDES
Chemical Composition
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Dislocations
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Electrical Properties
Photocurrent spectroscopy of a strained-layer superlattice, 11:38468 (J;GB)
Emission
Absorption measurements at high pressure (0-10 kbar) on strained superlattices, 11:38467 (J;GB)
Morphology
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Superlattices
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)

GALLIUM SELENIDES
Crystal Growth
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)
Optical Properties
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)

GALLIUM SULFIDES
Crystal Growth
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)
Optical Properties
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)

GAMMA DETECTION
Fiber Optics
100 MH/sub z/ fiber optic single transient gamma ray detection system, 11:38732 (J;US)
Survey Monitors
Field tests of a portable tissue equivalent survey meter for monitoring mixed beta/gamma radiation fields, 11:38722 (R;US)
Tissue-Equivalent Detectors
Field tests of a portable tissue equivalent survey meter for monitoring mixed beta/gamma radiation fields, 11:38722 (R;US)

GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS

GAMMA SPECTRA
Reviews
International program to improve decay data for transactinium nuclides, 11:39255 (J;NL)

GARNETS
For silicate garnets only.

Defects
Fracture of solid state laser slabs, 11:38585 (J;US)
Fractures
Fracture of solid state laser slabs, 11:38585 (J;US)
Stresses
Fracture of solid state laser slabs, 11:38585 (J;US)

GAS ANALYSIS
Computerized Control Systems
Central gas analysis laboratory with remote sampling, 11:38742 (J;US)
Mass Spectrometers
Central gas analysis laboratory with remote sampling, 11:38742 (J;US)

GAS APPLIANCES
Air Pollution Monitoring
Nitrogen oxides in kitchens with gas stoves. A pilot project for the evaluation of a test method, 11:38826 (R;DK;In Danish)
Nitrogen Dioxide
Peak exposures to nitrogen dioxide and study design to detect their acute health effects, 11:38822 (R;US)
Space Heaters
Pulse-combustion space-heater field-test-unit design. Topical report, February 1985-January 1986, 11:38665 (R;US)

GAS BURNERS
Design
Woodgas burners: background and design. Special report, 11:37700 (R;US)
Heat Recovery
Construction, operation and optimisation of a furnace for the economic burning of low calorific value gases. Final report, 11:38663 (R;DE)
Low BTU Gas
Construction, operation and optimisation of a furnace for the economic burning of low calorific value gases. Final report, 11:38663 (R;DE)

GAS CENTRIFUGES
Precession
Microcomputer-based instrument for the detection and analysis of precession motion in a gas centrifuge machine. Revision 1, 11:37509 (R;US)

GAS CHROMATOGRAPHY
Measuring Instruments
Atmospheric pressure helium afterglow discharge detector for gas chromatography, 11:38474 (P;US)

GAS COOLANTS
See GASES

GAS COOLED REACTORS
See also HTGR TYPE REACTORS
Historical Aspects

EXHAUST GASES
FUEL GAS
SHALE GAS
Optical Dispersion
Precise measurements of optical dispersion using a new interferometric technique, 11:39297 (J;US)
Solar Heating
Solar radiant processing of gas-particle systems for producing useful fuels and chemicals, 11:37796 (BA;US)
Statistical Models
Statistical theory of electronic energy relaxation, 11:37688 (R;US)

GASOLINE
Air Pollution Control
Air pollution. EPA's strategy to control emissions of benzene and gasoline vapor, 11:37470 (R;US)
Combustion
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline, 11:38214 (B;US)
Prices
Monthly Energy Review, March 1986, 11:37466 (R;US)

GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES

GASOLINE SERVICE STATIONS
Pollution Regulations
Air pollution. EPA's strategy to control emissions of benzene and gasoline vapor, 11:37470 (R;US)

GE SEMICONDUCTOR DETECTORS
Passivation
Germanium detector passivated with hydrogenated amorphous germanium, 11:38729 (P;US)
Performance Testing
Environmental applications for an intrinsic germanium well detector, 11:38883 (BA;US)
Protective Coatings
Germanium detector passivated with hydrogenated amorphous germanium, 11:38729 (P;US)

GEESE
Habitat
Effects of water levels on productivity of Canada geese in the northern Flathead Valley. Annual report, 1985 (Branta canadensis moffitti), 11:37720 (R;US)
Productivity
Effects of water levels on productivity of Canada geese in the northern Flathead Valley. Annual report, 1985 (Branta canadensis moffitti), 11:37720 (R;US)

GENE PROMOTORS
See GENE REPRESSORS

GENE REPRESSORS
Biological Effects
Studies on the mechanism of regulation of the mRNA level for a soybean storage protein subunit by exogenous L-methionine (Glycine max L.), 11:38964 (J;US)

GENERATORS (PULSE)
See PULSE GENERATORS

GENERATORS (STEAM)
See STEAM GENERATORS

GEOLOGIC FRACTURES
Computerized Simulation
Calculation of laboratory stress-strain behavior using a compliant joint model, 11:39010 (BA;US)
Mathematical Models
Calculation of laboratory stress-strain behavior using a compliant joint model, 11:39010 (BA;US)

GEOLOGY
Research Programs
Geosciences projects FY 1985 listing, 11:38983 (R;US)

GEOMAGNETIC FIELD
Mathematical Models
Geomagnetic main field modeling using magnetohydrodynamic constraints, 11:38988 (R;US)

GEOMAGNETIC STORMS
See MAGNETIC STORMS

GEOPHYSICS
Research Programs
Geosciences projects FY 1985 listing, 11:38983 (R;US)

GEORGIA
Military Facilities
Installation Restoration Program, Phase 2 - Confirmation/Quantification Stage i, Moody Air Force Base, Georgia. Final technical report, January 1984-December 1985, 11:38891 (R;US)

GEOTHERMAL DISTRICT HEATING
Economic Analysis
Energy extraction via downhole heat exchangers in flooded abandoned mines: Applications for district heating and cooling, 11:37817 (BA;US)
Heat Exchangers
Energy extraction via downhole heat exchangers in flooded abandoned mines: Applications for district heating and cooling, 11:37817 (BA;US)

GEOTHERMAL ENERGY
Research Programs
Geothermal progress monitor report No. 9, June 1985. A decade of progress, 1974-1984, 11:37809 (R;US)

GEOTHERMAL EXPLORATION
Exploration for sources of geothermal energy.
Meetings
Fracture detection and mapping, 11:37810 (R;US)

GEOTHERMAL POWER PLANTS
Geothermal progress monitor report No. 9, June 1985. A decade of progress, 1974-1984, 11:37809 (R;US)

GEOTHERMAL SYSTEMS
See also HOT-DRY-ROCK SYSTEMS
Heat Extraction
Energy extraction via downhole heat exchangers in flooded abandoned mines: Applications for district heating and cooling, 11:37817 (BA;US)

GEOTHERMAL WELLS
Monitors
Investigation of radon and helium as possible fluid-phase precursors to earthquakes. Technical report, 11:38992 (R;US)
Well Completion
Present status of hot dry rock technology, 11:37816 (BA;US)
Well Drilling
Present status of hot dry rock technology, 11:37816 (BA;US)

GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY

GERMANIUM
Carrier Density
Photo Hall-effect characterization of closely compensated Ge:Be, 11:38415 (J;US)
Carrier Lifetime
Photo Hall-effect characterization of closely compensated Ge:Be, 11:38415 (J;US)
Chemical Vapor Deposition
Growth of high-quality thin-film Ge single crystals by plasma-enhanced chemical vapor deposition, 11:38251 (R;US)
Crystal Growth Methods
Crystal growth and controlled doping of epitaxial Ge Films on (100)GaAs by sputter deposition, 11:38348 (J;NL)
Electrical Properties
Growth, nucleation, and electrical properties of molecular beam epitaxially grown, As-doped Ge on Si substrates, 11:38439 (J;US)

Hall Effect
Photo Hall-effect characterization of closely compensated Ge:Be, 11:38415 (J;US)
Impurities
Photo Hall-effect characterization of closely compensated Ge:Be, 11:38415 (J;US)
Molecular Beam Epitaxy
Growth, nucleation, and electrical properties of molecular beam epitaxially grown, As-doped Ge on Si substrates, 11:38439 (J;US)
Morphology
Growth, nucleation, and electrical properties of molecular beam epitaxially grown, As-doped Ge on Si substrates, 11:38439 (J;US)
Muon Probes
Muon channeling in Ge: evidence for pionium formation, 11:38405 (R;US)
Nucleation
Growth, nucleation, and electrical properties of molecular beam epitaxially grown, As-doped Ge on Si substrates, 11:38439 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Pionium
Muon channeling in Ge: evidence for pionium formation, 11:38405 (R;US)
Sorptive Properties
Local surface structures of c(2 x 2) S/Ni(011) and (2 x 2) S/Ge(111) determined using ARPEFS, 11:38249 (R;US)

GERMANIUM 68
Radioisotope Generators
Preparation of gallium-68 radiopharmaceuticals for positron tomography. Progress report, November 1, 1983-May 31, 1986, 11:38937 (R;US)
Tissue Distribution
Preparation of gallium-68 radiopharmaceuticals for positron tomography. Progress report, November 1, 1983-May 31, 1986, 11:38937 (R;US)

GERMANIUM ALLOYS
Precipitation
Atomic resolution study of precipitates in an Al-Ge alloy, 11:38248 (R;US)

GERMANIUM DETECTORS
See GE SEMICONDUCTOR DETECTORS

GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY

GERMS (MICROORGANISMS)
See MICROORGANISMS

GETTERS
Materials used for the purification of vacuum atmospheres; see also the specific materials.
Pumping
Dissociative pumping of the alkanes using nonevaporable getters, 11:38642 (J;US)

GIANT RESONANCE
De-Excitation
Photon decay of giant resonances, 11:39246 (R;US)

GLASS
See also BOROSILICATE GLASS
PHOSPHATE GLASS
Chemical Preparation
Glass ceramic toughened with tetragonal zirconia, 11:38358 (P;US)
Crack Propagation
Mathematical description of transient crack growth behavior in glass, 11:38463 (J;GB)
Laser Implosions
High—aspect-ratio laser-fusion targets driven by 24-beam uv laser radiation, 11:39379 (J;US)
Optical Properties
Measurements of losses and lasing efficiency in Nd:Cr:GSGG laser rods, 11:38608 (BA;US)
Physical Radiation Effects
Measurements of losses and lasing efficiency in Nd:Cr:GSGG laser rods, 11:38608 (BA;US)
Vapor Deposited Coatings
Ablation layer coating of mechanically nonsupported inertial fusion targets, 11:39395 (J;US)

GLASS MELTERS
See CERAMIC MELTERS

GLASSY METALS
See METALLIC GLASSES

GLAUBER'S SALT
See SODIUM SULFATES

GLOVEBOXES
Design
Glove box design and material, 11:38547 (R;US)

GLUEBALLS
Meson-Meson Interactions
Strength of glueball interactions, 11:39163 (R;DE)
Particle Production
Hadronic production of J/sup PC/ = 2^{++} glueballs, 11:39125 (R;US)

GLUONIUM
See GLUEBALLS

GOBAR GAS
See METHANE

GOESGEN REACTOR
Daeniken, Soleure, Switzerland
Performance
Goesgen: a nuclear power station with an excellent performance record, 11:37912 (J;US)

GOLD
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 11:39076 (R;US)
Ion Channeling
Energy levels of channeled ions, 11:39277 (J;US)
Magnetic Properties
Magnetic property changes in epitaxial metal film sandwiches, 11:38347 (J;NL)
Pairing Interactions
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Pion Minus Reactions
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Pion Plus Reactions
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Proton Reactions
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Structural Models
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)

GRADED BAND GAP SOLAR CELLS
See CASCADE SOLAR CELLS

GRADED LIE GROUPS
Irreducible Representations
Super-Kac-Moody algebras and supersymmetric 2d-free fermions, 11:39188 (J;DE)

GRAIN ALCOHOL
See ETHANOL

GRAIN BOUNDARIES
Barium
Compositional heterogeneity in ZnO-BaO-CoO varistors, 11:38378 (J;NL)
Crystal Structure
Effect of interatomic potential on the calculated energy and structure of high-angle coincident site grain boundaries. I. (100) twist boundaries in aluminum, 11:38345 (J;US)
Reviews
Recent developments concerning segregation and fracture at grain boundaries, 11:38318 (J;US)
Segregation
Recent developments concerning segregation and fracture at grain boundaries, 11:38318 (J;US)

Transmission Electron Microscopy
Grain-boundary microstructures in a commercial alumina ceramic, 11:38387 (J;US)
GRAND UNIFIED THEORY
Charge States
Half integer charged hadrons from higher dimensions, 11:39162 (R;DE)
Composite Models
Mass generation in composite models, 11:39161 (R;DE)
Many-Dimensional Calculations
Half integer charged hadrons from higher dimensions, 11:39162 (R;DE)
GRANITES
Electromagnetic Surveys
Recent experiments using geophysical tomography in fractured granite, 11:38995 (J;US)
Fracture Mechanics
Measurement and calculation of the mechanical response of a highly fractured rock, 11:39011 (BA;US)
Petrogenesis
Alabama Tin Belt. Metallogenesis and mineral resource evaluation. Final report for the 1983-1984 project year, 11:38985 (R;US)
Physical Properties
Variation in properties of nuclear test areas and media at the Nevada Test Site, 11:39008 (R;US)
GRANULAR MATERIALS
For unspecified materials having a granular texture.
Shear Properties
Shearing motion of a fluid-saturated granular material, 11:39122 (J;US)
GRAPHITE
Atom Transport
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
Retention of deuterium and tritium in POCO AXF-5Q graphite, 11:38445 (J;US)
Degassing
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
Retention and thermal release of oxygen implanted in graphite, 11:38444 (J;US)
Electron Spectra
Angular dependence of the auger lineshape of graphite, 11:38412 (R;US)
Porosity
Retention of deuterium and tritium in POCO AXF-5Q graphite, 11:38445 (J;US)
Sorptive Properties
Chemisorption of tritium on graphites at elevated temperatures, 11:38443 (J;US)
Retention of deuterium and tritium in Papyex graphite, 11:38448 (J;NL)
Retention of deuterium and tritium in POCO AXF-5Q graphite, 11:38445 (J;US)
Surface Treatments
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
GRAPHITE FIBERS
See CARBON FIBERS
GRAPHITE MODERATOR
See GRAPHITE
GRAVIMETRY
For gravitation measurements only; not for GRAVIMETRIC ANALYSIS.
Electronic gravimeter to measure g(r), 11:38750 (J;US)
GRAVITATION
Measuring Instruments
Electronic gravimeter to measure g(r), 11:38750 (J;US)
GRAVITATIONAL COLLAPSE
Neutrinos
Neutrinos from gravitational collapse, 11:39019 (R;US)
GRAZING INCIDENCE TOMOGRAPHY
Telescopes
Grazing Incidence Beam Expander, 11:38597 (BA;US)
GREAT BRITAIN
See UNITED KINGDOM
GREAT LAKES REGION
See FEDERAL REGION V
GREENHOUSE PROJECT
Nuclear Explosions
Operation Greenhouse. Scientific Director's Report. Annex 1.12. Long-distance measurement of energy yield of an atomic explosion. Nuclear explosions 1951, 11:38779 (R;US)
GREENLAND
Aerial Monitoring
Radio echo sounding of the marginal zone of the Inland Ice in the Disko Bay region 1984, 11:37717 (R;DK;In Danish)
Energy Supplies
Energy plan for Qaqortoq/Julianehaab, 11:38104 (R;DK;In Danish)
Resource Potential
Energy plan for Qaqortoq/Julianehaab, 11:38104 (R;DK;In Danish)
GRINDING MACHINES
Optimization
Importance of maceration for the sod peat quality, 11:37360 (R;SE;In Swedish)
Performance
Grinding/polishing tool to aid thin section preparation of small samples, 11:38341 (J;US)
GROSS-NEVEU MODEL
See LAGRANGIAN FIELD THEORY
GROSSWELZHEIM HDR REACTOR
See HDR REACTOR
GROUND MOTION
Mathematical Models
Measurement of elastic properties and static strength. Final report, 1 July 1983-1 October 1984, 11:38784 (R;US)
GROUND WATER
Contamination
Control of water infiltration through SLB trench covers, 11:37539 (RA;US)
Overview of the geochemical code MINTEQ: applications to performance assessment for low-level wastes, 11:37591 (RA;US)
Environmental Transport
MYGRT: an IBM personal computer code for simulating solute migration in groundwater. User's manual, 11:37850 (R;US)
Flow Models
Proposal for a test problem for HYDROCOIN Level 3 Case 2. Sensitivity analysis for deep disposal in partially saturated, fractured tuff, 11:37644 (R;US)
Flow Rate
Development and applications of two finite element groundwater flow and contaminant transport models: FEWA and FEMA, 11:37590 (RA;US)
H Codes
Proposal for a test problem for HYDROCOIN Level 3 Case 2. Sensitivity analysis for deep disposal in partially saturated, fractured tuff, 11:37644 (R;US)
Heat Storage
High temperature Aquifer Thermal Energy Storage. Report on preliminary research, design and construction of high-temperature Aquifer Thermal Energy Storage, 11:38068 (R;DK;In Danish)
Isotope Ratio
Uranium isotope distribution in ground water at the Shiprock Mill site, 11:38913 (BA;US)
Radionuclide Migration
Determining leach rates of monolithic waste forms, 11:38402 (R;US)
Engineered sorbent barrier screening studies, 11:37537 (RA;US)
Environmental monitoring at low-level waste shallow-land burial sites, 11:37560 (RA;US)
Evaluating geomorphic hazards from river behavior -- Durango, Riverton, and Gunnison UMTRA Project sites, 11:38914 (BA;US)

Groundwater modeling for uranium mill tailings sites, 11:37659 (BA;US)
Hydrologic site characterization - the UMTRA project approach, 11:37634 (BA;US)
Long-term monitoring for closed sites, 11:37556 (RA;US)
Modeling flood events for long-term stability, 11:37632 (BA;US)
Radiological characterization requirements for planning remedial action at UMTRA project sites, 11:37660 (BA;US)
Radionuclide migration in groundwater at a low-level waste disposal site: a comparison of predictive performance modeling versus field observations, 11:37594 (RA;US)
Surface geophysics at the UMTRA project site in Lakeview, Oregon, 11:37633 (BA;US)
The effects of column dimensions on uranium mill tailings leach curves, 11:37645 (BA;US)
Tritium migration at the low-level radioactive waste disposal site at Maxey Flats near Morehead, Kentucky, 11:37558 (RA;US)
Waste migration studies at the Savannah River Plant burial ground, 11:37538 (RA;US)

GROUND-WATER RESERVES
See AQUIFERS

GROUTING
Bulk Density
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)
Compression Strength
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)
Permeability
Full-scale borehole sealing test in anhydrite under simulated downhole conditions. Volume 2, 11:39001 (R;US)
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)
Porosity
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)

GUN COTTON
See NITROCELLULOSE

H

H CODES
Preliminary examination of the impacts of repository site characterization activities and facility construction and operation activities on Hanford air quality, 11:37613 (R;US)
Proposal for a test problem for HYDROCOIN Level 3 Case 2. Sensitivity analysis for deep disposal in partially saturated, fractured tuff, 11:37644 (R;US)
Manuals
HECTR Version 1.5 user's manual, 11:38024 (R;US)

HABITAT
Construction
Fisheries enhancement in the Fish Creek Basin: an evaluation of in-channel and off-channel projects, 1984. Annual report 1984, 11:38944 (R;US)

HADDAM NECK REACTOR
See CONNECTICUT YANKEE REACTOR

HADRON REACTIONS
Multiplicity
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Scaling Laws
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)

HADRON-HADRON INTERACTIONS
Particle Production
On the QCD 2->3 contributions to the hadroproduction of heavy quarks, 11:39165 (R;DE)

HADRONS
See also MESONS
Mass Formulae
Possible evidence for dynamical supersymmetry in the hadron spectrum, 11:39176 (J;US)
Supersymmetry
Possible evidence for dynamical supersymmetry in the hadron spectrum, 11:39176 (J;US)

HAFNIUM ALLOYS
Crystal-Phase Transformations
Structural phase transitions in $HfV_2Hsub(x)$ and $Zrsub(0.99)Hfsub(0.01)V_2Hsub(x)$ observed in time differential perturbed angular correlation studies, 11:38241 (R;DE;In German)
Structural Chemical Analysis
Site occupations in Li_2 ordered alloys by axial electron channeling microanalysis (Ni_2AlX (X = Co, Hf, Fe)), 11:38234 (R;US)

HAFNIUM HYDRIDES
Crystal-Phase Transformations
Structural phase transitions in $HfV_2Hsub(x)$ and $Zrsub(0.99)Hfsub(0.01)V_2Hsub(x)$ observed in time differential perturbed angular correlation studies, 11:38241 (R;DE;In German)

HANDLING (MATERIALS)
See MATERIALS HANDLING

HANDLING (WASTES)
See WASTE MANAGEMENT

HANFORD ATOMIC PRODUCTS OPERATION
See HAPO

HANFORD ENGINEERING DEVELOPMENT LABORATORY
Waste Management
Radioactive and non-radioactive polychlorinated biphenyl (PCB) management at Hanford, 11:37464 (RA;US)

HAPO
Chemical Effluents
Environmental monitoring at Hanford for 1985, 11:38886 (R;US)
Environment
Environmental monitoring at Hanford for 1985, 11:38886 (R;US)
Environmental Impacts
Preliminary examination of the impacts of repository site characterization activities and facility construction and operation activities on Hanford air quality, 11:37613 (R;US)
Process facility modifications project, Hanford Site. Draft environmental impact statement, 11:37638 (R;US)
Radioactive Effluents
Environmental monitoring at Hanford for 1985, 11:38886 (R;US)

HARBORS
Capacity
Final report on US - Italian coal logistics (Description of harbors in both countries), 11:37353 (R;US)
Physical Properties
Final report on US - Italian coal logistics (Description of harbors in both countries), 11:37353 (R;US)
Sediments
Bioaccumulation of toxins from dredged materials from the port of Hampton Roads, Virginia. Final report for period ending November 1984, 11:38890 (R;US)

HARDTACK PROJECT
Nuclear Explosions
Operation Hardtack. Project 1.4. Physical characteristics of craters from near-surface nuclear detonations. Report for April-October 1958, 11:38767 (R;US)
Operation Hardtack. Project 1.9. Loading on buried simulated structures in high-overpressure regions. Report for April-October 1958, 11:38768 (R;US)
Operation Hardtack. Projects 8.7/2.12d. Thermal radiation from very-low-yield burts, April-October 1958, 11:38782 (R;US)
Underwater Explosions
Operation Hardtack. Project 1.5. Refraction of shock from a deep-water burst. Report for April-October 1958, 11:38769 (R;US)
Operation Hardtack. Project 1.6. Water-wave measurements. Report for April-October 1958, 11:38770 (R;US)

HARMONIC GENERATION
Multi-Photon Processes
Four-photon resonant third harmonic generation, 11:39299 (BA;US)
HARVESTING
Air Pollution
Dustfalls in peat production and the utilization of peat, 11:37326 (RA;SE)
Permit Applications
Aspects on the reclamation of cut-away bogs, 11:37391 (RA;SE)
Water Pollution
Effects of mire drainage and peat extraction on benthic invertebrates and fish, 11:37322 (RA;SE)
HASTELLOY B
Gas Tungsten-Arc Welding
Welding procedure specification: gas tungsten arc welding of nickel-molybdenum or nickel-molybdenum-chromium (Hastelloy B and C). Supplement 1. Records of procedure qualification tests, 11:38276 (R;US)
HASTELLOY C
Gas Tungsten-Arc Welding
Welding procedure specification: gas tungsten arc welding of nickel-molybdenum or nickel-molybdenum-chromium (Hastelloy B and C). Supplement 1. Records of procedure qualification tests, 11:38276 (R;US)
HASTELLOY N
Gas Tungsten-Arc Welding
Gas tungsten arc welding of chromium-nickel steel to nickel-molybdenum-chromium-iron. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38288 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel-molybdenum-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38277 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-chromium-iron to nickel-molybdenum-chromium-iron, 11:38284 (R;US)
HASTELLOY X
Permeability
Hydrogen- and tritium permeation within high temperature reactor (HTR) development. Results for the alloy Hastelloy X, 11:37981 (R;DE;In German)
HAWAII
Ocean Thermal Power Plants
Conceptual design of a 10 MW shore-based OTEC plant, 11:37782 (BA;US)
HAYNES 25 ALLOY
Corrosion
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
HAZARDOUS MATERIALS
Not for radioactive materials.
Air Pollution
Environmental nitroarenes: an attempt to understand their mutagenic and carcinogenic properties, 11:38808 (R;US)
Chemical Analysis
Performance of RCRA (Resource Conservation and Recovery Act) Method 8280 for the analysis of dibenzo-p-dioxins and dibenzofurans in hazardous-waste samples, 11:38095 (R;US)
Chemical Composition
Savannah River Plant hazardous waste characterization, 11:37604 (R;US)
Phosphorus Fluorides
Synthesis of [^{14}C]methylphosphonic difluoride, 11:38528 (J;GB)
Regulations
Performance of RCRA (Resource Conservation and Recovery Act) Method 8280 for the analysis of dibenzo-p-dioxins and dibenzofurans in hazardous-waste samples, 11:38095 (R;US)
Sampling
Savannah River Plant hazardous waste characterization, 11:37604 (R;US)
Waste Disposal
Installation Restoration Program, Phase 2 - Confirmation/Quantification Stage i, Moody Air Force Base, Georgia. Final technical report, January 1984-December 1985, 11:38891 (R;US)
HCDA
See REACTOR CORE DISRUPTION
HD 8077
See NICKEL BASE ALLOYS
HDO
See DEUTERIUM COMPOUNDS
HDR REACTOR
Fuel Assemblies
FAID/SPAR field tests at KAHL. Final report, 11:37860 (R;US)
HEALTH PHYSICS
See RADIATION PROTECTION
HEART
Biological Radiation Effects
Improved technique for monitoring electrocardiograms during exposure to radio-frequency radiation, 11:38973 (R;US)
HEAT DISSIPATION
See DIFFUSION
ENVIRONMENTAL TRANSPORT
HEAT DISTRIBUTION SYSTEMS
Construction
Transport of waste heat or primary heat over long distances - supplemented by simple surveying of waste heat sources, 11:38199 (R;SE;In Swedish)
Cost
Transport of waste heat or primary heat over long distances - supplemented by simple surveying of waste heat sources, 11:38199 (R;SE;In Swedish)
HEAT EXCHANGERS
See also RADIATORS
Computerized Control Systems
An automated aid for isolating defects in the heat exchanger tubing of nuclear steam generators, 11:38005 (BA;US)
Defects
An automated aid for isolating defects in the heat exchanger tubing of nuclear steam generators, 11:38005 (BA;US)
Design
Offshore use of titanium - benefits and possible limitations, 11:38239 (R;NO)
Eddy Current Testing
An automated aid for isolating defects in the heat exchanger tubing of nuclear steam generators, 11:38005 (BA;US)
Evaporators
Using structured surfaces to enhance heat transfer in falling film flow, 11:37834 (R;FI)
Film Flow
Experimental study of heat transfer to falling liquid films, 11:37833 (R;FI)
Heat Pipes
Development of a high temperature heat pipe heat exchanger. Final report, 11:38548 (R;DE)
Heat Transfer
Experimental study of heat transfer to falling liquid films, 11:37833 (R;FI)
Flow-induced vibration in shell-and-tube heat exchangers with double-segmental baffles, 11:38620 (R;US)
Shower and high-pressure oil temperature control, 11:38627 (R;US)
Spirally fluted tube heat exchanger as a condenser and evaporator, 11:38621 (R;US)
Hydraulics
Flow-induced vibration in shell-and-tube heat exchangers with double-segmental baffles, 11:38620 (R;US)
Shower and high-pressure oil temperature control, 11:38627 (R;US)
Spirally fluted tube heat exchanger as a condenser and evaporator, 11:38621 (R;US)
Materials
Offshore use of titanium - benefits and possible limitations, 11:38239 (R;NO)
Mechanical Vibrations
Flow-induced vibration in shell-and-tube heat exchangers with double-segmental baffles, 11:38620 (R;US)

Pressure Drop
Shellside waterflow pressure drop distribution measurements in an industrial-sized test heat exchanger, 11:38571 (J;US)
Surface Properties
Using structured surfaces to enhance heat transfer in falling film flow, 11:37834 (R;FI)
Tubes
Spirally fluted tube heat exchanger as a condenser and evaporator, 11:38621 (R;US)

HEAT METERS
Design
Device for measuring and controlling the energy consumption of heating installations. Summary report, 11:38156 (R;DE)
Measuring Methods
Device for measuring and controlling the energy consumption of heating installations. Summary report, 11:38156 (R;DE)

HEAT OF COMBUSTION
See COMBUSTION HEAT

HEAT PIPES
Design
Integrated heat pipe-thermal storage design for a solar receiver (Constant power source with heat from sun or from storage), 11:38065 (R;US)
Evaluation
Integrated heat pipe-thermal storage design for a solar receiver (Constant power source with heat from sun or from storage), 11:38065 (R;US)
Heat Exchangers
Development of a high temperature heat pipe heat exchanger. Final report, 11:38548 (R;DE)
Materials
Integrated heat pipe-thermal storage design for a solar receiver (Constant power source with heat from sun or from storage), 11:38065 (R;US)
Service Life
A computational model for predicting the life of tubes used in petro-chemical heater service, 11:37439 (BA;US)
Stresses
A computational model for predicting the life of tubes used in petro-chemical heater service, 11:37439 (BA;US)

HEAT PUMPS
See also AIR SOURCE HEAT PUMPS
CHEMICAL HEAT PUMPS
WATER SOURCE HEAT PUMPS
Development and demonstration of a Stirling/Rankine heat activated heat pump. Volume 1. Phase 2. Product development program. Final report, 11:38151 (R;US)
Compressors
Analysis of heat pump compressor life. Final report, 11:38155 (R;US)
Economic Analysis
Comparative economic evaluation of industrial heat pumps, 11:38193 (R;US)
Semiconductor Materials
Energy conversion processes supporting advanced thermal energy storage technologies (Particle catalyzed solar photodissociation; solid state radiative heat pump), 11:38067 (R;US)
Vapor Condensers
Mass and heat transfer in reflux condensers for absorption heat pumps, 11:38185 (TG;FR)

HEAT RECOVERY
Heat Pumps
Comparative economic evaluation of industrial heat pumps, 11:38193 (R;US)

HEAT RESISTING ALLOYS
See also ALLOY-A-286
STAINLESS STEEL-304
STAINLESS STEEL-304L
STAINLESS STEEL-310
STAINLESS STEEL-316
STAINLESS STEEL-347
Oxidation
Oxidation resistance of gas turbine combustion materials, 11:38330 (J;IT)

HEAT SINKS
Adhesives
Thermally conductive silicone based materials for attaching concentrator solar cells to heat sinks, 11:37752 (BA;US)

HEAT SOURCES (RADIOISOTOPE)
See RADIOISOTOPE HEAT SOURCES

HEAT STORAGE
U Codes
Initial study of thermal energy storage in unconfined aquifers (UCATES), 11:38069 (R;US)

HEAT STORAGE DEVICES
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT STORAGE SYSTEMS
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT TRANSFER PROPERTIES
See THERMODYNAMIC PROPERTIES

HEAT TREATMENTS
In metallurgy as well as for the biological effects of heat.
Biological Effects
Concomitant changes in high temperature tolerance and heat-shock proteins in desert succulents (Agave deserti, Carnegiea gigantea, Ferocactus acanthodes), 11:38955 (J;US)

HEATER OIL
See HEATING OILS

HEATING OILS
Carcinogen Screening
Integrated report on the toxicological mitigation of coal liquids by hydrotreatment and other processes (Petroleum and coal-derived products), 11:37388 (R;US)
Chemical Properties
Integrated report on the toxicological mitigation of coal liquids by hydrotreatment and other processes (Petroleum and coal-derived products), 11:37388 (R;US)
Physical Properties
Integrated report on the toxicological mitigation of coal liquids by hydrotreatment and other processes (Petroleum and coal-derived products), 11:37388 (R;US)

HEATING SYSTEMS
Energy Conservation
Renovation of oil heating systems up to 1995, 11:38182 (R;FI;In Finnish)
Energy Consumption
Energy in Dalecarlia in 1990 - calculations of energy sources utilized in the heating plants, 11:38105 (R;SE;In Swedish)
Renovation of oil heating systems up to 1995, 11:38182 (R;FI;In Finnish)
Mathematical Models
HVAC control process simulation, 11:38180 (R;NO)
Planning
Energy in Dalecarlia in 1990 - calculations of energy sources utilized in the heating plants, 11:38105 (R;SE;In Swedish)

HEAVY ION FUSION REACTIONS
Research Programs
Heavy ion fusion reactions in perspective, 11:39205 (R;US)
Leap to explore the region of neutron-rich heavy element isotopes, 11:39253 (R;US)

HEAVY ION REACTIONS

Cross Sections
Microscopic model of nucleus-nucleus collisions, 11:39217 (R;US)
Fission Fragments
Microscopic model of nucleus-nucleus collisions, 11:39217 (R;US)
Giant Resonance
Heavy ion peripheral collisions at relativistic energies: Theory of giant quadrupole excitation, 11:39265 (J;US)
Inclusive Interactions
Hard photon emission from colliding nuclei, 11:39261 (R;DE)
Peripheral Collisions
Heavy ion peripheral collisions at relativistic energies: Theory of giant quadrupole excitation, 11:39265 (J;US)

HEAVY LEPTONS
Helicity
Helicity amplitudes for heavy lepton production in e^+e^- annihilation, 11:39164 (R;DE)
Pair Production
Helicity amplitudes for heavy lepton production in e^+e^- annihilation, 11:39164 (R;DE)
HEAVY MEDIA SEPARATION
Coal cleaning test facility campaign report No. 4: Kentucky No. 11 seam coal, 11:37356 (R;US)
HEAVY OILS
See PETROLEUM
VISCOSITY
HEISSDAMPFREAKTORANLAGE
See HDR REACTOR
HELIOSTATS
Solar Tracking Systems
Evaluation of Heliostat Characterization System for use at the Central Receiver Test Facility, 11:37770 (R;US)
HELIUM
Investigation of radon and helium as possible fluid-phase precursors to earthquakes. Technical report, 11:38992 (R;US)
Metallurgical Effects
Role of helium in the development of damage structure and swelling in neutron-irradiated aluminium, 11:38328 (J;GB)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
HELIUM 3
Spin-Lattice Relaxation
Spin relaxation in normal liquid ^{3}He: T-italic$_1$ in the Fermi liquid (T-italic< <T-italic/sub F/) regime, 11:39120 (J;US)
HELIUM 3 TARGET
Pion Reactions
Three-particle systems at low and intermediate energies, 11:39211 (R;CA)
HELIUM 4
Neutron Diffraction
Deep inelastic neutron scattering from single-crystal hcp ^{4}He, 11:38432 (J;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM IONS
Ion-Atom Collisions
Collisionally excited few-electron systems: theoretical introduction and survey, 11:39106 (J;US)
HEPTANE
Combustion Kinetics
Combustion characteristics in the transition region of liquid fuel sprays. Final Report, January 1983-September 1985, 11:38533 (R;US)
HETEROJUNCTIONS
Prior to July 1981, this concept was indexed to SEMICONDUCTOR JUNCTIONS.
Radiation Hardening
Summary of recent studies on AlGaAs/GaAs radiation hardened photodiodes, 11:38451 (BA;US)
HIGGS BOSONS
Mass Spectra
Higgs-boson masses in a supersymmetric extension of the standard model, 11:39190 (J;US)
Radiative Decay
Two photon decay widths of non-standard spin-0 bosons, 11:39168 (R;CA)
HIGH BTU GAS
Over 900 Btu/ft^3.
Cost
Analysis of the market and product costs for coal-derived high Btu gas, 11:37264 (R;US)
Market
Analysis of the market and product costs for coal-derived high Btu gas, 11:37264 (R;US)
HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Computer Codes
View of software for HEP experiments, 11:39131 (R;US)
Research Programs
Experimental elementary particle physics research. Technical progress report, 11:39130 (R;US)
Research in elementary particle physics. Technical progress report, June 1, 1985-May 31, 1986, 11:39129 (R;US)
HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES
HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS
HIGH-FREQUENCY HEATING
See also ICR HEATING
LOWER HYBRID HEATING
Computing of RF heating and current-drive in tokomaks, 11:39314 (R;CH)
Kinetic Equations
Application of the gyrokinetic equation to high frequency R.F. , 11:39330 (J;GB)
HIGH-LEVEL RADIOACTIVE WASTES
Physical Properties
Rheological evaluation of simulated neutralized current acid waste, 11:37615 (R;US)
Radioactive Waste Storage
Preliminary examination of the impacts of repository site characterization activities and facility construction and operation activities on Hanford air quality, 11:37613 (R;US)
Rail Transport
Railroad transportation of spent nuclear fuel, 11:37525 (R;US)
Rheology
Rheological evaluation of simulated neutralized current acid waste, 11:37615 (R;US)
Vitrification
Development of the DWPF canister temporary shrink-fit seal, 11:37603 (R;US)
Modifying the rheological properties of melter feed for the Hanford Waste Vitrification Plant, 11:37619 (R;US)
Waste Transportation
Railroad transportation of spent nuclear fuel, 11:37525 (R;US)
HIGH-VOLTAGE PULSE GENERATORS
Design
TEMPO machine, 11:38646 (R;US)
Operation
TEMPO machine, 11:38646 (R;US)
HIGHWAYS

HOG FUEL
See WOOD WASTES
HOLLOW CATHODES
Uses
Hot hollow cathode and its applications in vacuum coating: A concise review, 11:38644 (J;US)
HOLMIUM 158
Energy Levels
Characterization of isomers in ^{158}Ho, 11:39242 (J;US)
Isomeric Nuclei
Characterization of isomers in ^{158}Ho, 11:39242 (J;US)
HOPE CREEK-1 REACTOR
Salem, New Jersey, USA. Prior to November 1973 known as Newbold Island-1 Reactor, for the initially planned site and older material is so indexed.
Reactor Safety
Integrated nuclear safety review program at PSE & G, 11:38036 (J;US)
HOPE CREEK-2 REACTOR
Salem, New Jersey, USA. Prior to November 1973 known as Newbold Island-2 Reactor for the initially planned site, and older material is so indexed.
Reactor Safety
Integrated nuclear safety review program at PSE & G, 11:38036 (J;US)
HOT CELLS
Remote Handling Equipment
Analytical chemistry in a new analytical hot cell facility, 11:37516 (J;US)
Sample Changers
Remote analytical cell in-cell transfer systems, 11:37517 (J;US)

HOT WATER HEATERS
See WATER HEATERS
HOT-DRY-ROCK SYSTEMS
Heat Extraction
Present status of hot dry rock technology, 11:37816 (BA;US)
Hydraulic Fracturing
Present status of hot dry rock technology, 11:37816 (BA;US)
HOUSES
Air Infiltration
Seasonal variation in effective leakage area, 11:38158 (R;US)
Airtightness
Influence of airtightness on air infiltration, 11:38183 (R;FI,;a Finnish)
Solar Space Heating
IEA Task VIII: Passive and hybrid solar low energy buildings. National report Subtask D Program and design phase, 11:37795 (R;NO)
Wood Burning Furnaces
Outdoor furnace heats home. [Final report], 11:38153 (R;US)
HTGR TYPE REACTORS
ECCS
Small inherently safe reactor with a passive ECCS, 11:38042 (J;US)
Reactor Safety
Small inherently safe reactor with a passive ECCS, 11:38042 (J;US)
Research Programs
Hydrogen- and tritium permeation within high temperature reactor (HTR) development. Results for the alloy Hastelloy X, 11:37981 (R;DE;In German)
Steam Generators
Steam generator design considerations for modular HTGR plant, 11:37930 (R;US)
Underwater Facilities
Conceptual study of a nuclear plant used for seabed electrical power, 11:37931 (J;US)
HUGENHOLTZ-PINES THEORY
See HYDROGEN
HUMAN POPULATIONS
Radiation Doses
Muon fluence measurements at the site boundary for 1985, 11:37650 (R;US)
Radiation Hazards
Pathways analyses and their role in the decision making process for selection of low-level waste disposal sites, 11:37662 (BA;US)
HUMANS
See HUMAN POPULATIONS
HUMUS
Sorptive Properties
Interactions between polycyclic aromatic hydrocarbons and dissolved humic material: binding and dissociation, 11:38907 (J;US)
HUTCHINSON ISLAND-1 REACTOR
See LUCIE-1 REACTOR
HUTCHINSON ISLAND-2 REACTOR
See LUCIE-2 REACTOR
HYBRID REACTORS
Breeding Blankets
Fusion breeder blanket nucleonics, 11:39369 (R;US)
HYCSOS
See CHEMICAL HEAT PUMPS
HYDRATES
For chemical compounds or minerals.
Sorptive Properties
Tritium gettering from air with hydrogen uranyl phosphate, 11:39391 (J;US)
HYDRAULIC RAMS
See PUMPS
HYDROBROMIC ACID
Autoionization
Vibrational effects in the spin-orbit autoionization of HBr, 11:39082 (J;US)
Photoionization
Vibrational effects in the spin-orbit autoionization of HBr, 11:39082 (J;US)

Chemical Reaction Yield
Lifetime and quenching measurements of C_3H emission produced by vacuum ultraviolet photolysis of C_3H_8, 11:38524 (BA;US)
Combustion Heat
New method for determining heats of combustion of gaseous hydrocarbons, 11:38534 (R;US)
Desorption
Comparison of glow discharge cleaning and ion-impact desorption of stainless steel, 11:38316 (J;US)
Ecological Concentration
Temporal trends of contamination of Puget Sound, 11:38902 (R;US)
Electron-Ion Collisions
Studies of total ionization in gases/mixtures of interest to pulsed power applications, 11:39078 (J;US)
Electron-Molecule Collisions
Studies of total ionization in gases/mixtures of interest to pulsed power applications, 11:39078 (J;US)
Emission
Optical measurements of hydrocarbons emitted from a simulated crevice volume in an engine, 11:38219 (J;US)
Excited States
Lifetime and quenching measurements of C_3H emission produced by vacuum ultraviolet photolysis of C_3H_8, 11:38524 (BA;US)
Ion-Molecule Collisions
Studies of total ionization in gases/mixtures of interest to pulsed power applications, 11:39078 (J;US)
Pipelines
Developments in the simulation and design of multiphase pipeline systems, 11:37480 (RA;NO)
Transport
Hydrocarbon transport systems - operation and future development. Pt. 2, 11:37479 (R;NO)
HYDROCHLORIC ACID
Absorption
Potential benefits of improved mass transfer in SSMS hot gas cleanup, 11:37276 (R;US)
Air Pollution
Diffusion Estimates Handbook (application to the Space Shuttle HCl exhaust cloud). Report for October 1985-February 1986, 11:38789 (R;US)
Removal
Potential benefits of improved mass transfer in SSMS hot gas cleanup, 11:37276 (R;US)
Rotational States
Measurement of the nu_3 perpendicular bending mode of Ar-HCl by intracavity far infrared laser Stark spectroscopy, 11:38501 (BA;US)
HYDROELECTRIC POWER PLANTS
Radio echo sounding of the marginal zone of the Inland Ice in the Disko Bay region 1984 (Greenland), 11:37717 (R;DK;In Danish)
Capacity
Balance optimal hydro power system expansion planning model, 11:37718 (R;FI)
Environmental Effects
Effects of water levels on productivity of Canada geese in the northern Flathead Valley. Annual report, 1985, 11:37720 (R;US)
Wildlife and wildlife habitat loss assessment at Detroit Big Cliff Dam and Reservoir Project, North Santiam River, Oregon. Final report, 11:37724 (R;US)
Wildlife and wildlife habitat loss assessment at Lookout Point Dam and Reservoir Project, Middle Fork Willamette River, Oregon. Final report, 11:37726 (R;US)

Wildlife and wildlife habitat loss assessment at Hills Creek Dam and Reservoir Project, Middle Fork Willamette, River, Oregon. Final report, 11:37721 (R;US)
Wildlife and wildlife habitat loss assessment at Cougar Dam and Reservoir Project, South Fork McKenzie River, Oregon. Final report, 11:37725 (R;US)
Wildlife and wildlife habitat loss assessment at Green Peter-Foster Project, Middle Fork Santiam River, Oregon. Final report, 1985, 11:37722 (R;US)
Wildlife and wildlife habitat loss assessment at Dexter Dam and Reservoir Project, Middle Fork Willamette River, Oregon. Final report, 11:37723 (R;US)
Feasibility Studies
Radio echo sounding of the marginal zone of the Inland Ice in the Disko Bay region 1984, 11:37717 (R;DK;In Danish)
Greenland
Radio echo sounding of the marginal zone of the Inland Ice in the Disko Bay region 1984, 11:37717 (R;DK;In Danish)
Optimization
Balance optimal hydro power system expansion planning model, 11:37718 (R;FI)

HYDROFLUORIC ACID
Molecule-Molecule Collisions
Observation of rapid E-to-V energy transfer in the 2.3 μm laser-induced fluorescence of PuF_6 containing HF, 11:39083 (J;US)

HYDROGEN
Adsorption
Direct coal liquefaction using iron-titanium hydride as a hydrogen distribution and catalytic material. Final report, 11:37269 (R;US)
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
Atom-Atom Collisions
Spin exchange optical pumping to produce large amounts of polarized nuclei, 11:39100 (J;US)
Atoms
Atomic hydrogen maser investigations of hydrogen atom interactions from 4 to 12 K. Final report, 1 March 1980-28 February 1985, 11:38576 (R;US)
Chemical Reaction Yield
Quantitative species concentration measurements using coherent anti-Stokes Raman spectroscopy with nonresonant susceptibility normalization, 11:38480 (BA;US)
Chemisorption
Testing site size requirements in chemisorption: Experiment and theory, 11:38498 (J;US)
Diffusion
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
Fluorescence Spectroscopy
Two-step saturated fluorescence spectroscopy and imaging of atomic hydrogen in flames, 11:38481 (BA;US)
G Value
Radiolytic gas generation from cement-based waste hosts for DOE low-level radioactive wastes, 11:38401 (R;US)
Inelastic Scattering
Mean-trajectory Gaussian wave-packet approach to rotationally inelastic molecule-surface diffraction. Annual report, 11:39068 (R;US)
Ion Sources
Radio frequency induction plasma generator 80-kV test stand operation, 11:39374 (J;US)
Ion-Atom Collisions
Collisionally excited few-electron systems: theoretical introduction and survey, 11:39106 (J;US)
Isotopic Exchange
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
Masers
Atomic hydrogen maser investigations of hydrogen atom interactions from 4 to 12 K. Final report, 1 March 1980-28 February 1985, 11:38576 (R;US)
Light-weight hydrogen maser. Final report, March 1979-July 1984, 11:38577 (R;US)
Molecular Beams
Intense beam of metastable H_3 molecules, 11:39066 (R;US)
Mean-trajectory Gaussian wave-packet approach to rotationally inelastic molecule-surface diffraction. Annual report, 11:39068 (R;US)
Multiple Gaussian wave-packet theory of H_3 diffraction and rotational excitation by collision with solid surfaces. Annual report, 11:39069 (R;US)
Permeability
Hydrogen- and tritium permeation within high temperature reactor (HTR) development. Results for the alloy Hastelloy X, 11:37981 (R;DE;In German)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Trapping
FIM/IAP/TEM studies of ion implanted nickel emitters, 11:38335 (J;US)

HYDROGEN 1 MINUS BEAMS
Beam Extraction
Ring magnetron ionizer for polarized negative ion sources, 11:39096 (J;US)
Beam Neutralization
Ring magnetron ionizer for polarized negative ion sources, 11:39096 (J;US)
Beam Production
Developing a 500 eV proton beam, 11:39097 (J;US)
Lamb-shift sources: hopes and realities, 11:38708 (J;US)
Ring magnetron ionizer for polarized negative ion sources, 11:39096 (J;US)
Sputtering of negative hydrogen ions by cesium bombardment, 11:39079 (J;US)
Status of the AGS polarized negative ion source, 11:39095 (J;US)
Working group summary-lamb-shift sources, 11:39098 (J;US)
Ion Sources
Working group summary-lamb-shift sources, 11:39098 (J;US)
Lamb Shift
Developing a 500 eV proton beam, 11:39097 (J;US)
Lamb-shift sources: hopes and realities, 11:38708 (J;US)
Working group summary-lamb-shift sources, 11:39098 (J;US)
Polarization
Charge-transfer collisions for polarized ion sources, 11:39099 (J;US)
Ring magnetron ionizer for polarized negative ion sources, 11:39096 (J;US)
Working group summary-lamb-shift sources, 11:39098 (J;US)
Polarized Beams
Charge-transfer collisions for polarized ion sources, 11:39099 (J;US)

HYDROGEN 1 TARGET
Proton Reactions
Parity violation in proton-proton scattering at intermediate energies, 11:39184 (R;US)

ILLINOIS
Radioactive Waste Management
Public participation - an approach in the Central Midwest region, 11:37570 (RA;US)
Rift Zones
New Madrid Seismotectonic Program. Final report, 11:38991 (R;US)
IMAGE CONVERTERS
Liquid Crystals
Infrared diagnosis using liquid crystal detectors, 11:38590 (TG;US)
IMAGE PROCESSING
Algorithms
Applicability of the maximum likelihood estimator algorithm for image recovery in accelerated positron emitter beam injection, 11:38641 (R;US)

IMMOBILIZATION
See VITRIFICATION
IMPERMEABLE DRY ROCK
See HOT-DRY-ROCK SYSTEMS
IMPURITIES
Unwanted constituents, not for TRACE AMOUNTS, INTERFERING ELEMENTS, or metal and nonmetal additions.
Control
Prevention of impurity accumulation in classical tokamaks, 11:39406 (J;JP)
Segregation
Recent developments concerning segregation and fracture at grain boundaries, 11:38318 (J;US)
IN CORE INSTRUMENTS
See also specific instruments plus FUEL ASSEMBLIES or REACTOR CORES.
Neutron Detectors
Heterogeneity effects on the detector field of view in the radial direction in BWRs, 11:37883 (J;US)
INCIDENTS
See ACCIDENTS
INCINERATION
See COMBUSTION
INCINERATORS
Design
Development and testing of a mobile incinerator, 11:37547 (RA;US)
Emission
Measurements and analyses of flue gas performed at the waste incinerator plant of Aalidhem at Umeaa, 11:38829 (R;SE;In Swedish)
Fuel Consumption
Indianapolis technical innovation program: program results. Final Report, 11:38083 (B;US)
Performance Testing
Development and testing of a mobile incinerator, 11:37547 (RA;US)
Pollution Control
Indianapolis technical innovation program: program results. Final Report, 11:38083 (B;US)
INCOMPRESSIBLE FLOW
Quantum Mechanics
Quantized vortex filaments in incompressible fluids, 11:39113 (R;US)
Two-Dimensional Calculations
Possible nonstationary solutions in the turbulence of a two-dimensional liquid, 11:39123 (TG;US)
INCONEL 600
Chemical Reactions
Chemical aspects of cesium iodide interaction in steam with 304 stainless steel and Inconel-600, 11:38253 (R;US)
Fatigue
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Fracture Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Gas Tungsten-Arc Welding
Welding procedure specification: gas tungsten arc welding of nickel tonickel-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38282 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium molybdenum, 11:38275 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-chromium-iron, 11:38287 (R;US)
Oxidation
Chemical aspects of cesium iodide interaction in steam with 304 stainless steel and Inconel-600, 11:38253 (R;US)
Physical Radiation Effects
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Reactor Materials
Chemical aspects of cesium iodide interaction in steam with 304 stainless steel and Inconel-600, 11:38253 (R;US)
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Tensile Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
INCONEL 625
Corrosion
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
Laser Welding
Microstructural study of high energy density dissimilar metal welds, 11:38296 (R;US)
INCONEL 718
Weldability
Microstructural analysis of alloy 718 welds to Kovar and 304L, 11:38297 (R;US)
INCONEL ALLOYS
See also INCONEL 600
INCONEL 625
INCONEL 718
Gas Tungsten-Arc Welding
Gas tungsten arc welding of carbon steel to nickel-chromium-iron. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38289 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel-copper to nickel-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38283 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel tonickel-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38282 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-chromium-iron to nickel-molybdenum-chromium-iron, 11:38284 (R;US)
Mechanical Properties
Steam generator tube sampling: feasibility study. Final report, 11:37996 (R;US)
Reactor Materials
Steam generator tube sampling: feasibility study. Final report, 11:37996 (R;US)
INDIAN POINT-3 REACTOR
Buchanan, New York, USA
Primary Coolant Circuits
Safety impact of mechanical- and maintenance-induced seal failures of reactor coolant pumps, 11:38026 (J;US)
Reactor Safety
Safety impact of mechanical- and maintenance-induced seal failures of reactor coolant pumps, 11:38026 (J;US)
INDIANA
Rift Zones
New Madrid Seismotectonic Program. Final report, 11:38991 (R;US)
INDIUM 111
Tissue Distribution
Preparation of gallium-68 radiopharmaceuticals for positron tomography. Progress report, November 1, 1983-May 31, 1986, 11:38937 (R;US)
INDIUM ARSENIDES
Charged-Particle Transport
Diffusion dynamics of holes in In/sub x-italic/Ga/sub 1-//sub x-italic/As/GaAs strained-layer superlattices, 11:38420 (J;US)
Electrical transport of holes in GaAs/InGaAs/GaAs single strained quantum wells, 11:38424 (J;US)
Energy-Level Transitions
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)

Holes
Electrical transport of holes in GaAs/InGaAs/GaAs single strained quantum wells, 11:38424 (J;US)
Ion Implantation
Zinc-implantation-disordered (InGa)As/GaAs strained-layer superlattice diodes, 11:38416 (J;US)
Photocurrents
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)
Physical Radiation Effects
Zinc-implantation-disordered (InGa)As/GaAs strained-layer superlattice diodes, 11:38416 (J;US)
Superlattices
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)
Diffusion dynamics of holes in In/sub x-italic/Ga/sub 1-//sub x-italic/As/GaAs strained-layer superlattices, 11:38420 (J;US)
Visible Spectra
Derivative photocurrent spectrum of an InGaAs/GaAs strained-layer superlattice, 11:38429 (J;US)

INDIUM OXIDES
Electric Conductivity
Electrical conductivity, Seebeck Coefficient, and structure of In_2O_3-SnO_2, 11:38372 (J;US)
Electrical Properties
Ion-beam sputtered indium tin oxide for InP solar cells, 11:37748 (J;US)
Optical Properties
Ion-beam sputtered indium tin oxide for InP solar cells, 11:37748 (J;US)
Seebeck Effect
Electrical conductivity, Seebeck Coefficient, and structure of In_2O_3-SnO_2, 11:38372 (J;US)
Sputtering
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)
Ion-beam sputtered indium tin oxide for InP solar cells, 11:37748 (J;US)
Surface Coating
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)

INDIUM PHOSPHIDE SOLAR CELLS
Coatings
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)
Efficiency
Ion-beam sputtered indium tin oxide for InP solar cells, 11:37748 (J;US)
Fabrication
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)
Performance
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)
Surface Treatments
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)

INDIUM SELENIDE SOLAR CELLS
Cost
Characterization of CdZnS/$CuInSe_2$ thin-film solar cells, 11:37761 (BA;US)
Efficiency
Characterization of CdZnS/$CuInSe_2$ thin-film solar cells, 11:37761 (BA;US)
Fabrication
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)

INDIUM SELENIDES
Chemical Composition
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)
Electron Microprobe Analysis
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)
Electron Microscopy
Scanning Auger microprobe studies of ball cratered CdS/$CuInSe_2$ solar cells, 11:37750 (J;US)

INDONESIA
Peat
Some environmental considerations in peat development in Indonesia, 11:37323 (RA;SE)

INDOOR AIR POLLUTION
Air Pollution Control
Indoor air quality control techniques: a critical review, 11:38793 (R;US)
Air Pollution Monitors
Peak exposures to nitrogen dioxide and study design to detect their acute health effects, 11:38822 (R;US)
Data Base Management
Indoor air pollution source data base. Report for August 1985-February 1986, 11:38819 (R;US)
Information Systems
Indoor air pollution source data base. Report for August 1985-February 1986, 11:38819 (R;US)
Monitoring
Total volatile organic compounds (VOC) in the indoor air of east Tennessee homes, 11:38790 (R;US)
Optical Properties
Screening polynuclear aromatic pollutants in ambient and indoor air by synchronous luminescence, 11:38791 (R;US)
Research Programs
EPA (Environmental Protection Agency) research on indoor air quality, 11:38817 (R;US)
Sampling
Sample design considerations for indoor-air-exposure surveys, 11:38820 (R;US)
Surveys
Sample design considerations for indoor-air-exposure surveys, 11:38820 (R;US)

INDUSTRIAL PLANTS
See also COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
PETROLEUM REFINERIES
SNG PLANTS
Air Pollution
Investigation of the formation of a Portland Cement plant detached plume, 11:38824 (R;US)
Dryers
Report of the energy consumption in industrial drying operations, 11:38201 (R;FI;In Finnish)
Drying
Report of the energy consumption in industrial drying operations, 11:38201 (R;FI;In Finnish)
Steam Generation
Economic comparison of coal and wood for industrial steam generation, 11:37379 (BA;US)

INDUSTRIAL SECTOR
See INDUSTRY

INDUSTRIAL WASTES
Hazardous Materials
Performance of RCRA (Resource Conservation and Recovery Act) Method 8280 for the analysis of dibenzo-p-dioxins and dibenzofurans in hazardous-waste samples, 11:38095 (R;US)
Toxicity
Validity of effluent and ambient toxicity tests for predicting biological impact, Skeleton Creek, Enid, Oklahoma, 11:38899 (R;US)
Water Pollution
Validity of effluent and ambient toxicity tests for predicting biological impact, Skeleton Creek, Enid, Oklahoma, 11:38899 (R;US)

INDUSTRY
See also CEMENT INDUSTRY
CHEMICAL INDUSTRY

COAL INDUSTRY
ELECTRIC POWER INDUSTRY
FERTILIZER INDUSTRY
MINERAL INDUSTRY
NATURAL GAS INDUSTRY
WOOD PRODUCTS INDUSTRY

Power Demand
Electric power demand of the industry - means of controlling the loads, 11:38129 (R;SE;In Swedish)
Marketing electricity to industrial consumers: a study of Pacific Northwest industries, 11:38111 (R;US)

INELASTIC SCATTERING
Quantization
Second quantization techniques in the scattering of nonidentical composite bodies, 11:39203 (R;US)

INERTIAL CONFINEMENT
A dynamic plasma confinement by inertial forces.
Demonstration Programs
Inertial confinement fusion development options: Facility characteristics and schedules from a reactor physics viewpoint, 11:39385 (J;US)
Microspheres
Hollow droplet generator for polymer shell production, 11:39394 (J;US)
Reactor Fueling
Hollow droplet generator for polymer shell production, 11:39394 (J;US)

INERTIAL CONFINEMENT FUSION DEVICES
See ICF DEVICES

INFECTIOUS DISEASES
Pharmacology
Pharmacological management of sepsis, 11:38940 (R;US)

INFORMATION
Recommendations
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)

INFORMATION NEEDS
Identification of subject areas or types of data on which information is needed in order to further specific areas of research. Coordinate with descriptors for the specific areas of research.
Coordinated Research Programs
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Recommendations
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)

INFORMATION SYSTEMS
Operation
Development of a plan for a national LLW information management system based on data acquired from a uniform manifest, 11:37581 (RA;US)

INFRARED SPECTRA
High Pressure
Far-infrared spectroscopy in diamond anvil cells, 11:38477 (J;US)
Sample Holders
Far-infrared spectroscopy in diamond anvil cells, 11:38477 (J;US)

INHIBITORS (CORROSION)
See CORROSION INHIBITORS

INITIAL RESERVOIR PRESSURE
See RESERVOIR PRESSURE

INOR-8
Gas Tungsten-Arc Welding
Gas tungsten arc welding of chromium-nickel steel to nickel-molybdenum-chromium-iron. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38288 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel-molybdenum-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38277 (R;US)

INPUT-OUTPUT
See MATERIAL BALANCE

IN-SITU GASIFICATION
Bench-Scale Experiments
Char consumption in the underground gasification of Eastern bituminous coal, 11:37277 (R;US)
Cavities
Modeling of self-gasification of coal, 11:37284 (BA;US)
Computerized Simulation
Modeling of self-gasification of coal, 11:37284 (BA;US)

IN-SITU RETORTING
Waste Water
GC/MS determination of amines, 11:37507 (BA;US)

INSPECTION
Planning
Quality assurance for IAEA inspection planning, 11:37672 (R;US)

INSTRUMENTS (MEASURING)
See MEASURING INSTRUMENTS

INSULATING LIMITERS
See LIMITERS

INSULATING OILS
Combustion
Products of partial combustion of PCB alternative dielectric fluids, 11:37444 (RA;US)
Pyroplasma detoxification of askarel fluids, 11:37841 (RA;US)
Comparative Evaluations
Retrofilling askarel transformers - words of caution, 11:37446 (RA;US)
Decontamination
Chemical destruction of polychlorinated biphenyl, 11:37846 (RA;US)
Electrochemical process for decontaminating PCB-containing transformer coolants, 11:37845 (RA;US)
Non-sodium process for removal of PCBs from contaminated transformer oil, 11:37844 (RA;US)
Monitoring
Clor-N-Oil test kit as a PCB screening tool, 11:37848 (RA;US)
Performance Testing
FORMEL - a new, safer, non-flammable dielectric and coolant for transformers, 11:38514 (RA;US)
Pyrolysis
Products of partial combustion of PCB alternative dielectric fluids, 11:37444 (RA;US)
Research Programs
FORMEL - a new, safer, non-flammable dielectric and coolant for transformers, 11:38514 (RA;US)
Products of partial combustion of PCB alternative dielectric fluids, 11:37444 (RA;US)

INSULATION (THERMAL)

Auger and electron energy loss study of the electronic structure of U—M(M = Fe,Co,Ni) metallic glasses, 11:39092 (J;US)
Energy-Loss Spectroscopy
Auger and electron energy loss study of the electronic structure of U—M(M = Fe,Co,Ni) metallic glasses, 11:39092 (J;US)
Gas Tungsten-Arc Welding
Gas tungsten arc welding of carbon steel to nickel-chromium-iron. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38289 (R;US)
Phase Diagrams
Phase diagrams for Fe-Cr-Ni based alloys. Pt. 1. Phase diagrams for binary and ternary alloys of Fe, Cr and Ni with C and with Si, 11:38238 (R;DE)
Sorptive Properties
Direct coal liquefaction using iron-titanium hydride as a hydrogen distribution and catalytic material. Final report, 11:37269 (R;US)
Structural Chemical Analysis
Site occupations in Li_2 ordered alloys by axial electron channeling microanalysis (Ni_2AlX (X = Co, Hf, Fe)), 11:38234 (R;US)

IRON BASE ALLOYS
See also KOVAR
STEELS
Microstructure
Characterization of spinodally-decomposed Fe-30.1% Cr-9.9% Co. Part 1 (At. %), 11:38233 (R;US)

IRON COMPLEXES
Electron Transfer
Ab initio models for electron tunnelling between transition metal complexes. Final report, 11:38490 (R;US)

IRON GARNETS

Risk-based analysis of allowed outage times in nuclear power plants, 11:38028 (J;US)

LIMESTONE
Suppression of coal-dust explosions with inert dusts and moisture. Research report, 11:37389 (R;US)

LIMITERS
Degassing
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
Design
Design and fabrication of a beryllium limiter for ISX-B, 11:39419 (BA;US)
Erosion
Weight change measurements of erosion/deposition at beryllium limiter tiles in the Impurity Study Experiment-B, 11:39400 (J;US)
Fabrication
Design and fabrication of a beryllium limiter for ISX-B, 11:39419 (BA;US)
Gettering
Cleanup and gettering during the Beryllium Limiter Experiment in Impurity Study Experiment-B, 11:39376 (J;US)
Impurities
Nuclear microprobe analysis. Applications, 11:39364 (R;US)
Surface analysis of 1984/1985 Tokamak Fusion Test Reactor limiter tiles, 11:39397 (J;US)
Materials
Design and fabrication of a beryllium limiter for ISX-B, 11:39419 (BA;US)
Thermomechanical testing of beryllium for the JET/ISX-B beryllium limiter experiment, 11:39418 (BA;US)
Melting
Weight change measurements of erosion/deposition at beryllium limiter tiles in the Impurity Study Experiment-B, 11:39400 (J;US)
Surface Cleaning
Cleanup and gettering during the Beryllium Limiter Experiment in Impurity Study Experiment-B, 11:39376 (J;US)

Surface Treatments
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)

LINACS

LIQUID FUELS
See also FUEL OILS
GASOLINE
KEROSENE

Combustion Kinetics
Combustion characteristics in the transition region of liquid fuel sprays. Final Report, January 1983-September 1985, 11:38533 (R;US)

LIQUID METAL COOLANT
See LIQUID METALS

LIQUID METAL COOLED REACTORS
See also LMFBR TYPE REACTORS

Primary Coolant Circuits
Method for removing cesium from a nuclear reactor coolant, 11:37938 (P;US)

LIQUID METALS

Sound Waves
Liquid metal thermoacoustic engine, 11:38681 (R;US)

LIQUIDS
See also COAL LIQUIDS
LIQUID METALS
NATURAL GAS LIQUIDS

Density
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)

Dislocations
Dislocation kinetics and acoustic wave approximation for liquids, 11:38638 (J;GB)

Thermal Conductivity
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)

Viscosity
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)

Zone Refining
Versatile zone refiner for liquids and low-melting solids, 11:38567 (J;US)

LITHIUM

Aerosols
Lithium combustion aerosol reactions in air containing carbon dioxide and water vapor, 11:38800 (RA;US)

Atmospheric Chemistry
Lithium combustion aerosol reactions in air containing carbon dioxide and water vapor, 11:38800 (RA;US)

Metallurgical Effects
Susceptibility of 2.25 Cr-1 Mo steel to liquid metal embrittlement by lithium-lead solutions, 11:39428 (BA;GB)

Targets
Testing of the prototype FMIT target with liquid lithium, 11:39425 (BA;GB)

Thermonuclear Reactor Materials
Experimental lithium system experience, 11:39424 (BA;GB)

LITHIUM 6 REACTIONS

One-Nucleon Transfer Reactions
Single nucleon transfer reactions in $^6Li + ^6Li$ collisions at 156 MeV, 11:39212 (R;DE)

LITHIUM 6 TARGET

Lithium 6 Reactions
Single nucleon transfer reactions in $^6Li + ^6Li$ collisions at 156 MeV, 11:39212 (R;DE)

Neutron Reactions
Determination of the neutron lifetime using e-p coincidence, 11:39139 (RA;US)

LITHIUM COMPOUNDS
See also LITHIUM OXIDES

Physical Radiation Effects
Thermal conductivities for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ solid breeders with and without irradiation effects, 11:39405 (J;US)

Thermal Conductivity
Thermal conductivities for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ solid breeders with and without irradiation effects, 11:39405 (J;US)

LITHIUM FLUORIDES

Electron Channeling
Channeling radiation: atomic and molecular physics in one and two dimensions, 11:38469 (J;US)

Reflectivity
Crystal R/sub c/ calibrations with an uncollimated, point x-ray source, 11:38404 (R;US)

Thermodynamic Properties
Selective radiative cooling with MGO and/or LIF layers, 11:38359 (P;US)

LITHIUM IONS

Beam Production
Flashover lithium ion source development for large pulsed power accelerators, 11:39392 (J;US)

Collisions
Ion-release experiments in the solar wind, 11:39044 (R;US)

Ion-Atom Collisions
Collisionally excited few-electron systems: theoretical introduction and survey, 11:39106 (J;US)

LITHIUM OXIDES

Physical Radiation Effects
Thermal conductivities for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ solid breeders with and without irradiation effects, 11:39405 (J;US)

Thermal Conductivity
Thermal conductivities for sintered and sphere-pac Li_2O and γ-$LiAlO_2$ solid breeders with and without irradiation effects, 11:39405 (J;US)

Thermodynamic Properties
A parametric study of water-cooled solid breeder blanket designs, 11:39382 (J;US)

LIXIVIATION
See LEACHING

LIZARDS

Habitat
Biological assessment of the effects of petroleum production at maximum efficient rate, Naval Petroleum Reserve No. 1 (Elk Hills), Kern County, California, on the endangered blunt-nosed leopard lizard, Gambelia silus, 11:37473 (R;US)

LMFBR TYPE REACTORS

LOW-LEVEL RADIOACTIVE WASTES
Bibliographies
Low-level radioactive waste from commercial nuclear reactors. Volume 3. Bibliographic abstracts of significant source documents. Part 1. Open-literature abstracts for low-level radioactive waste, 11:37610 (R;US)
Chemical Properties
Identification of radioactive mixed wastes in commercial low-level wastes, 11:37553 (RA;US)
Containment Systems
Design report for the interim waste containment facility at the Niagara Falls Storage Site, 11:37648 (R;US)
Decontamination
Reverse osmosis treatment of 200-area effluents, 11:37639 (R;US)
Ground Disposal
Corrective measures technology for shallow land burial at arid sites: field studies of biointrusion barriers and erosion control, 11:37640 (R;US)
Erosion control technology: a user's guide to the use of the Universal Soil Loss Equation at waste burial facilities, 11:37608 (R;US)
Evaluation and design of drained low-level radioactive disposal sites. Final report, 11:37599 (R;US)
Overview of the geochemical code MINTEQ: applications to performance assessment for low-level wastes, 11:37591 (RA;US)
Information Systems
Low level waste data base development - EPICOR-II resin/liner investigation - a program review, 11:37543 (RA;US)
Leaching
Development of an accelerated leach test(s) for low-level waste forms, 11:37544 (RA;US)
Special Waste Form Lysimeters-Arid: annual report 1985, 11:37550 (RA;US)
M Codes
Overview of the geochemical code MINTEQ: applications to performance assessment for low-level wastes, 11:37591 (RA;US)
Marine Disposal
Radiochemical studies in support of the low level waste ocean disposal program (East Coast Site), 11:37625 (R;US)
Monitoring
Environmental monitoring at low-level waste shallow-land burial sites, 11:37560 (RA;US)
Long-term monitoring for closed sites, 11:37556 (RA;US)
Radiation Hazards
Sensitivity analyses of EPA's codes for assessing potential health risks from disposal of low-level wastes, 11:37589 (RA;US)
Radiation Monitoring
Monitoring low-level waste allocations for compliance with limited availability provisions during transition and licensing periods, 11:37578 (RA;US)
Radioactive Waste Disposal
Alternative methods for LLW disposal: summary of methods and assessment of technical criteria, 11:37564 (RA;US)
An overview of the Department of Energy's program for low-level radioactive waste disposal, 11:37635 (BA;US)
Analysis of low-level radioactive waste disposal technologies, 11:37565 (RA;US)
Challenges of new low-level radioactive waste facility development, 11:37531 (RA;US)
Characteristics of the 3513 impoundment, 11:37611 (R;US)
Collapse and erosion at the low-level radioactive-waste burial site near Sheffield, Illinois, 11:37588 (RA;US)
Control of water infiltration through SLB trench covers, 11:37539 (RA;US)
Decision process for siting low-level radioactive waste disposal facilities: a role for the public, 11:37571 (RA;US)
Design, siting, criteria and cost analysis for a small low-level waste disposal facility, 11:37542 (RA;US)
Development of an accelerated leach test(s) for low-level waste forms, 11:37544 (RA;US)
Disposal facility, host state and site selection process in the Southeast Compact, 11:37567 (RA;US)
Disposal Site Information Management System, 11:37580 (RA;US)

Photoemission
Resonance and threshold effects in photoemission up to 3500 eV, 11:39110 (J;US)
Uptake
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:38969 (J;NL)
X-Ray Spectra
Low energy x-ray spectra measured with a mercuric iodide energy dispersive spectrometer in a scanning electron microscope, 11:38716 (R;US)
MANGANESE 51
Energy Levels
Nuclear data sheets for A = 51, 11:39230 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 51, 11:39230 (J;US)
MANGANESE ALLOYS
See also MONEL 400
Annealing
Icosahedral-phase formation by solid-state interdiffusion, 11:38325 (J;US)
Crystal Structure
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
Grain Size
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
Melting
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
Order-Disorder Transformations
Icosahedral-phase formation by solid-state interdiffusion, 11:38325 (J;US)
Precipitation Hardening
Precipitation of icosahedral Al-Mn during pulsed laser melting, 11:38315 (J;US)
MANGANESE OXIDES
Deformation
Dependence of the deformation of Mn/sub 1-δ/O on the deviation from stoichiometry, 11:38383 (J;US)
MANIPULATORS
Design
Monitor, the prelude to robotics, 11:38706 (BA;US)
MANOMETERS
See PRESSURE GAGES
MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS
MANURES
Anaerobic Digestion
Environmental and energetical consequences of biogas production from manures, 11:37697 (R;NL;DU)
Production of biogas (methane) and utilization as an alternate energy source, 11:37699 (R;NO)
The importance of anaerobic digestion of manure for energy, environmental and resource policy, 11:37704 (R;NL;DU)
Processing
Environmental and energetical consequences of biogas production from manures, 11:37697 (R;NL;DU)
The importance of anaerobic digestion of manure for energy, environmental and resource policy, 11:37704 (R;NL;DU)
Transport
Environmental and energetical consequences of biogas production from manures, 11:37697 (R;NL;DU)
MANY-BODY PROBLEM
Hamiltonians
Class of exactly soluble many-body Hamiltonians, 11:39291 (J;US)
MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

MARINE RISERS
Performance Testing
Drilling risers for great water depths: advantage for mass reduction by means of composite materials, 11:37434 (R;FR)
Stress Analysis
OTEC (Ocean Thermal Energy Conversion) cold water pipe at-sea test program data analysis project. Pipe, platform, and environmental parameters data reduction and analysis, 11:37778 (R;US)
OTEC (Ocean Thermal Energy Conversion) cold water pipe at-sea test program data analysis project. Users guide for the NOAA/ROTECF and NOAA/TRW computer models, 11:37779 (R;US)
Technology Assessment
Production risers for the future, 11:37411 (RA;NO)
MARINE VEHICLE ACCIDENTS
See ACCIDENTS
MARITIME TRANSPORT
Economics
Final report on US - Italian coal logistics, 11:37353 (R;US)
Fuel Cells
Marine applications for fuel-cell technology. Technical memo, 11:38140 (R;US)
Supply and Demand
Final report on US - Italian coal logistics, 11:37353 (R;US)
MARKET PENETRATION
See MARKETING RESEARCH
MARKETING RESEARCH
Evaluation
Approaching the market with new technologies, 11:38086 (R;US)
MARS PLANET
Meteorites
Oblique impact: a process for providing meteorite samples of other planets, 11:39026 (R;US)
Surfaces
Martian surface properties. Final Technical Report, 11:39027 (R;US)
Volcanoes
Martian surface properties. Final Technical Report, 11:39027 (R;US)
MARSHES
Beryllium 7
Distribution of cosmogenic ^{7}Be in salt marsh sediments, 11:38855 (J;US)
Radioecology
Distribution of cosmogenic ^{7}Be in salt marsh sediments, 11:38855 (J;US)
MASERS
Microwave Amplification by Stimulated Emission of Radiation.
Atomic hydrogen maser investigations of hydrogen atom interactions from 4 to 12 K. Final report, 1 March 1980-28 February 1985, 11:38576 (R;US)
Light-weight hydrogen maser. Final report, March 1979-July 1984, 11:38577 (R;US)
MASS SPECTROMETERS
Computerized Control Systems
Central gas analysis laboratory with remote sampling, 11:38742 (J;US)
Filaments
Fabrication of V-type filaments for surface ionization mass spectrometry, 11:38749 (J;NE)
Operation
Long-term changes in the sensitivity of quadrupole mass spectrometers, 11:39323 (J;US)
Sample Holders
Secondary ion mass spectrometry of Lewis acids, 11:38486 (BA;US)
Sensitivity
Long-term changes in the sensitivity of quadrupole mass spectrometers, 11:39323 (J;US)
MASS SPECTROSCOPY
Data Analysis
Application of Pattern Recognition to the analysis of metal ion chemical ionization mass spectra, 11:38485 (BA;US)
MASS (THERMAL)
See THERMAL MASS
MASSACHUSETTS INSTITUTE OF TECHNOLOGY ALC
See ALCATOR DEVICE
MATERIAL BALANCE
Sequential analysis of materials balances. Application to a prospective reprocessing facility, 11:37670 (R;US)
MATERIAL UNACCOUNTED FOR
Learning to live with holdup, 11:37674 (R;US)
MATERIALS

Calibration
Quality assurance program for field health laboratories, 11:37387 (R;US)
Comparative Evaluations
Laboratory and field evaluation of instantaneous reading dust instruments, 11:38740 (R;US)

Performance Testing
Field evaluation of the SIMSLIN II light-scattering instantaneous dust monitor, 11:37341 (R;US)
Laboratory and field evaluation of instantaneous reading dust instruments, 11:38740 (R;US)
Quality Assurance
Quality assurance program for field health laboratories, 11:37387 (R;US)

MEASURING METHODS
Use of a more specific term is recommended.
Calibration Standards
DOE research and development report. Progress report, October 1984-September 1985, 11:37679 (R;US)

MECHANICAL STRUCTURES
Dynamic Loads
Current problems in solid dynamics, 11:38542 (R;US)
Operation Hardtack. Project 1.9. Loading on buried simulated structures in high-overpressure regions. Report for April-October 1958, 11:38768 (R;US)
Soil-Structure Interactions
Soil-structure interaction. Volume 3. Influence of ground water, 11:37998 (R;US)

MEMBRANE TRANSPORT
Chemical Activation
Calcium transport in tonoplast and endoplasmic reticulum vesicles isolated from cultured carrot cells (Daucus carota Danvers), 11:38932 (J;US)
Inhibition
Calcium transport in tonoplast and endoplasmic reticulum vesicles isolated from cultured carrot cells (Daucus carota Danvers), 11:38932 (J;US)

MEMBRANES
Electric Conductivity
Application of fuel cells to chlorine-caustic technology, 11:38141 (R;US)
Voltage Drop
Application of fuel cells to chlorine-caustic technology, 11:38141 (R;US)

MEMORY DEVICES
Electro-Optical Effects
Applications of photoferroelectric properties of electrooptic ceramics, 11:38449 (BA;US)

MERCAPTOALANINE-BETA
See CYSTEINE

MERCURY
Biological Accumulation
Mercury. Occurrence and turnover of mercury in the environment. Status report October 1985, 11:38903 (R;SE;In Swedish)
Ecological Concentration
Mercury. Occurrence and turnover of mercury in the environment. Status report October 1985, 11:38903 (R;SE;In Swedish)
Temporal trends of contamination of Puget Sound, 11:38902 (R;US)
Environmental Transport
Mercury. Occurrence and turnover of mercury in the environment. Status report October 1985, 11:38903 (R;SE;In Swedish)
Natural Occurrence
Mercury. Occurrence and turnover of mercury in the environment. Status report October 1985, 11:38903 (R;SE;In Swedish)
Photoemission
Resonance and threshold effects in photoemission up to 3500 eV, 11:39110 (J;US)

MESON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

MESONS
Radiative Decay
Two photon radiative widths of light mesons as a test of gauge theories with integrally charged quarks, 11:39160 (R;DE)

MESSENGER-RNA
Biochemical Reaction Kinetics
Studies on the mechanism of regulation of the mRNA level for a soybean storage protein subunit by exogenous L-methionine (Glycine max L.), 11:38964 (J;US)

METALLIC GLASSES
Embrittlement
Study of the mechanism for annealing embrittlement of an iron-based metallic glass, 11:38460 (BA;NL)
Synthesis
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)

METALS

ALKALI METALS
ALUMINIUM
BISMUTH
CADMIUM
GALLIUM
GERMANIUM
LEAD
LIQUID METALS
MERCURY
RARE EARTHS
SCRAP METALS
THALLIUM
TIN
ZINC
Ablation
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Absorption Spectroscopy
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Creep
Effects of nonperiodic void spacing upon intergranular creep cavitation, 11:38344 (J;US)
Deformation
Forward and reverse rearrangements of dislocations in cell walls, 11:38242 (R;US)
Dislocations
Forward and reverse rearrangements of dislocations in cell walls, 11:38242 (R;US)
Environmental Transport
Sediment and contaminant transport in a marine environment, 11:38908 (R;US)
Failures
Effects of nonperiodic void spacing upon intergranular creep cavitation, 11:38344 (J;US)
Fractures
Recent developments concerning segregation and fracture at grain boundaries, 11:38318 (J;US)
Grain Boundaries
Recent developments concerning segregation and fracture at grain boundaries, 11:38318 (J;US)
Impurities
Recent developments concerning segregation and fracture at grain boundaries, 11:38318 (J;US)
Kapitza Resistance
Thermal impedance to normal and superconducting metals, 11:38314 (J;US)
Laser-Radiation Heating
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Materials Working
Mechanics of metal forming, 11:38245 (R;US)
Physical Radiation Effects
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Quantitative Chemical Analysis
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Thermal Conductivity
Thermal impedance to normal and superconducting metals, 11:38314 (J;US)
Toxicity
Bioaccumulation of toxins from dredged materials from the port of Hampton Roads, Virginia. Final report for period ending November 1984, 11:38890 (R;US)
Vacuum Coating
Design of an ultralow coverage metal evaporator based on a geometric factor, 11:38308 (J;US)

METEORITES
Acceleration
Oblique impact: a process for providing meteorite samples of other planets, 11:39026 (R;US)
METER WAVE RADIATION
See RADIOWAVE RADIATION
METHANATION
Catalysts
Low-temperature methanation and Fischer-Tropsch activity over supported ruthenium, nickel, and cobalt catalysts, 11:37696 (R;US)
METHANE
Biosynthesis
Purification of effluents from the wet-carbonization process of peat, 11:37304 (RA;SE)
Vyrmethane method, in situ gasification of peat/drainage of peat bog with help of mathematical models (Production from swamp water; methane separated from swamp water by pumping into processing unit and pressure reduction), 11:37335 (RA;SE)
Combustion Kinetics
Detailed structure studies of a laminar, methane/air diffusion flame I. Optical Measurements, 11:37504 (BA;US)
Heat transfer during laminar flow flame quenching: effect of fuels, 11:38532 (R;US)
Combustion Products
Quantitative species concentration measurements using coherent anti-Stokes Raman spectroscopy with nonresonant susceptibility normalization, 11:38480 (BA;US)
Electron-Molecule Collisions
Electron transport measurements in methane using an improved pulsed Townsend technique, 11:39080 (J;US)
Fischer-Tropsch Synthesis
Low-temperature methanation and Fischer-Tropsch activity over supported ruthenium, nickel, and cobalt catalysts, 11:37696 (R;US)
Ignition
Methane oxidation behind reflected shock waves: ignition delay times measured by pressure and flame band emission, 11:38535 (R;US)
Production
Environmental and energetical consequences of biogas production from manures, 11:37697 (R;NL;DU)
Production of biogas (methane) and utilization as an alternate energy source, 11:37699 (R;NO)
The importance of anaerobic digestion of manure for energy, environmental and resource policy, 11:37704 (R;NL;DU)
Recovery
Field evaluation of gas-lift and progressive-cavity pumps as effective dewatering methods for coalbed methane wells. Final report, April 1984-December 1985, 11:37496 (R;US)
Hydrologic characterization of coal seams for methane recovery--Activities 3 and 6 progress report: computer program for optimal dewatering for methane production. Topical report, January 1983-December 1984, 11:37497 (R;US)
Vyrmethane method, in situ gasification of peat/drainage of peat bog with help of mathematical models (Production from swamp water; methane separated from swamp water by pumping into processing unit and pressure reduction), 11:37335 (RA;SE)
Spatial Distribution
Variability in the partial pressures of gases in the unsaturated zone adjacent to a low-level radioactive-waste disposal site near Sheffield, Illinois, 11:37587 (RA;US)
METHANOL
Chemical Preparation
Methanol synthesis studies using in situ FTIR spectroscopy, 11:37707 (J;US)
OTEC methanol-from-coal process plantship studies, 11:37781 (BA;US)
Ignition
Compression ignition of coal slurry fuels, 11:38212 (R;US)
Infrared Spectra
Methanol synthesis studies using in situ FTIR spectroscopy, 11:37707 (J;US)
Uses
Methanol synthesis studies using in situ FTIR spectroscopy, 11:37707 (J;US)
METHIONINE
Biological Effects
Studies on the mechanism of regulation of the mRNA level for a soybean storage protein subunit by exogenous L-methionine (Glycine max L.), 11:38964 (J;US)
METHOXYBENZENE
See ANISOLE
METHYL ALCOHOL
See METHANOL
METHYL CHLORIDE
Viscosity
Viscosity of liquid-phase methyl chloride, 11:38511 (J;US)
METHYL FLUORIDE
Kerr Effect
Sensitive detection of tunable diode laser absorption by polarization rotation, 11:38455 (BA;US)

Corrosive Effects
Microbiologial corrosion in an aqueous environment. Final report, 11:38298 (R;NO;In Norwegian)
Ecology
Study of microbiologically influenced corrosion in nuclear power plants and a practical guide for countermeasures. Final report, 11:37994 (R;US)
MICROSCOPES
Calibration
Wolter x-ray microscope calibration, 11:39367 (R;US)
MICROSPHERES
Electrophoresis
Reversible and irreversible surface charge modification of bacteria for facilitating transport through porous media, 11:37425 (RA;US)
Environmental Transport
Reversible and irreversible surface charge modification of bacteria for facilitating transport through porous media, 11:37425 (RA;US)
Fabrication
Hollow droplet generator for polymer shell production, 11:39394 (J;US)
Submicron silicon powder production in an aerosol reactor, 11:38419 (J;US)
Physical Radiation Effects
Deuterium permeation properties of beta-irradiated and unirradiated poly(vinyl alcohol) and polystyrene shells, 11:38396 (J;US)
Vapor Deposited Coatings
Ablation layer coating of mechanically nonsupported inertial fusion targets, 11:39395 (J;US)
MICROWAVE EQUIPMENT
See also SQUID DEVICES
Folded waveguide coupler for ion cyclotron heating, 11:39357 (R;US)
MICROWAVE RADIATION
Atmospherics
Physical phenomena induced by microwave pulse propagation in the atmosphere, 11:38788 (BA;US)
Biological Radiation Effects
Circulating antibody response of mice exposed to 9-GHz pulsed microwave radiation, 11:38971 (R;US)
Effect of 9.6-GHz pulsed microwaves on the orb web spinning ability of the cross spider (Araneus diadematus), 11:38972 (R;US)
Nonelectromagnetic factors influence behavioral effects of microwave exposures, 11:38974 (R;US)
Computer Calculations
Physical phenomena induced by microwave pulse propagation in the atmosphere, 11:38788 (BA;US)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY EQUIPMENT
Factors limiting endurance of armor, artillery, and infantry units under simulated NBC conditions, 11:39432 (R;US)
MILITARY FACILITIES
Hazardous Materials
Installation Restoration Program, Phase 2 - Confirmation/Quantification Stage i, Moody Air Force Base, Georgia. Final technical report, January 1984-December 1985, 11:38891 (R;US)
Refuse Derived Fuels
Refuse-derived fuels in US Air Force heating and power systems. Final report, June 1982-February 1985, 11:37708 (R;US)
MILITARY PERSONNEL
Biological Radiation Effects
Nuclear-weapon-effect research at PSR (Pacific-Sierra Research Corporation) - 1983. Volume 9. Acute radiation effects on individual crew member performance. Final technical report, 26 October 1982-30 November 1983, 11:38763 (R;US)
Biological Stress
Factors limiting endurance of armor, artillery, and infantry units under simulated NBC conditions, 11:39432 (R;US)
Infectious Diseases
Pharmacological management of sepsis, 11:38940 (R;US)
MILL TAILINGS
Information Systems
Technical database and management system (DBMS) for the UMTRA project processing sites, 11:37636 (BA;US)
Leaching
The effects of column dimensions on uranium mill tailings leach curves, 11:37645 (BA;US)
Radiation Hazards
Health effects estimation: methods and results for uranium mill tailings contaminated properties, 11:37655 (R;US)
Radioactive Waste Disposal

Catalytic Effects
Characterization and catalytic activity of coal mineral matter. 2. Hydrodesulfurization of thiophene, 11:37315 (J;NL)
Classification
Application of automated image analysis to the study of mineral matter in raw and processed coals, 11:37292 (R;US)
Sampling
Application of automated image analysis to the study of mineral matter in raw and processed coals, 11:37292 (R;US)
MINERS
Delayed Radiation Effects
Lung cancer epidemiology in New Mexico uranium miners. Final technical report, 1 April 1983-15 May 1986, 11:37646 (R;US)
MINIMARS REACTOR
Design
MINIMARS: a 600-MWe advanced mirror-fusion reactor design, 11:39370 (R;US)
Minimars configuration design, 11:39360 (R;US)
MINING

MOLTEN SALTS
Fabrication
Potential benefits of improved mass transfer in SSMS hot gas cleanup, 11:37276 (R;US)
MOLYBDENUM
Catalytic Effects
Coal liquefaction by molybdenum catalyzed hydrogenation in the absence of solvent, 11:37296 (J;NL)
Improved catalysts for coal liquefaction. Quarterly report No. 7, March 1-May 31, 1986, 11:37268 (R;US)
Collisions
Sputtering of negative hydrogen ions by cesium bombardment, 11:39079 (J;US)
Field Emission
Field emission energy distribution study of laser-induced thermal effects, 11:38320 (J;US)
Ion Collisions
Sputtering of negative hydrogen ions by cesium bombardment, 11:39079 (J;US)
Ion Implantation
Study of Mo-, Au-, and Ni-implanted molybdenum laser mirrors by multiple angle of incidence spectroscopic ellipsometry, 11:38584 (J;US)
Laser-Radiation Heating
Field emission energy distribution study of laser-induced thermal effects, 11:38320 (J;US)
Optical Properties
Study of Mo-, Au-, and Ni-implanted molybdenum laser mirrors by multiple angle of incidence spectroscopic ellipsometry, 11:38584 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
Roughness
Study of Mo-, Au-, and Ni-implanted molybdenum laser mirrors by multiple angle of incidence spectroscopic ellipsometry, 11:38584 (J;US)
Secondary Emission
Sputtering of negative hydrogen ions by cesium bombardment, 11:39079 (J;US)
MOLYBDENUM CHLORIDES
Chemical Preparation
Synthesis and characterization of hexanuclear metal-metal bonded molydenum chloride sulfide cluster species, 11:38491 (R;US)
Derivatization
Synthesis and characterization of hexanuclear metal-metal bonded molydenum chloride sulfide cluster species, 11:38491 (R;US)
MOLYBDENUM IONS
Sputtering
Sputtering of negative hydrogen ions by cesium bombardment, 11:39079 (J;US)
MOLYBDENUM OXIDES
Chemical Reaction Kinetics
Dew point/temperature curves for selected metal/metal oxide systems in hydrogen atmospheres, 11:38510 (J;US)
MOLYBDENUM SULFIDES
Chemical Preparation
Synthesis and characterization of hexanuclear metal-metal bonded molydenum chloride sulfide cluster species, 11:38491 (R;US)
MONEL
Gas Tungsten-Arc Welding
Welding procedure specification: gas tungsten arc welding of nickel-copper to nickel-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38283 (R;US)

Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-copper, 11:38286 (R;US)

MONEL 400
Gas Tungsten-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-copper, 11:38274 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-copper, 11:38286 (R;US)

MONITORED RETRIEVABLE STORAGE
Economic Impact
Fiscal impacts model documentation. Version 1.0, 11:37617 (R;US)
Technical documentation and user's guide for City-County Allocation Model (CCAM). Version 1.0, 11:37618 (R;US)
Personnel
EXCOMP: an exposure comparison methodology, 11:37654 (R;US)
Radiation Hazards
EXCOMP: an exposure comparison methodology, 11:37654 (R;US)
Social Impact
Technical documentation and user's guide for City-County Allocation Model (CCAM). Version 1.0, 11:37618 (R;US)

MONITORS (AIR POLLUTION)

MONTE CARLO METHOD
Algorithms
Monte Carlo simulation of self-avoiding surfaces in three dimensions, 11:39296 (J;US)

MONTICELLO REACTOR
Monticello, Minnesota, USA
Service Life
Nuclear plant life extension and critical components, 11:37870 (J;US)

MOON
Basalt
Apollo 15 mare units and their petrogenesis, 11:39032 (RA;US)
Geologic history of quartz-normative and olivine-normative basalts in the vicinity of Hadley Rille (Apollo 15), 11:39036 (RA;US)
Geologic History
Geologic history of quartz-normative and olivine-normative basalts in the vicinity of Hadley Rille (Apollo 15), 11:39036 (RA;US)
Geology
Papers presented to the workshop on the geology and petrology of the apollo 15 landing site, 11:39031 (R;US)
Infrared Spectra
Spectral reflectance study of the Hadley-Appenine (Apollo 15) region, 11:39039 (RA;US)
Meetings
Papers presented to the workshop on the geology and petrology of the apollo 15 landing site, 11:39031 (R;US)
Petrology
Apollo 15 mare units and their petrogenesis, 11:39032 (RA;US)
Apollo 15 mare volcanism: constraints and problems, 11:39034 (RA;US)
Hadley Rille, lava tubes and mare volcanism at the Apollo 15 site, 11:39035 (RA;US)
Volcanic Rocks
Apollo 15 mare volcanism: constraints and problems, 11:39034 (RA;US)
Volcanoes
Hadley Rille, lava tubes and mare volcanism at the Apollo 15 site, 11:39035 (RA;US)

MORTARS
Mechanical Properties
Physical and chemical characterization of 50 pulverized coal ashes with respect to partial cement replacement in concrete, 11:37307 (R;NL)

MOSFET
Metal Oxide Silicon Field Effect Transistors.
Physical Radiation Effects
Theory of response of radiation sensing field-effect transistors in zero-bias operation, 11:38655 (J;US)

MUF
See MATERIAL UNACCOUNTED FOR

MULE DEER
See DEER

MULLITE
Fracture Properties
Transformation toughened ceramics for the heavy duty diesel engine technology program, phase 2. Final Report, August 1984-July 1985, 11:38355 (R;US)

MULTIPHASE FLOW
On-Line Measurement Systems
On-line component ratio measurement of oil/gas/water mixtures using an admittance sensor, 11:37408 (RA;NO)

MULTIPROCESSING

Fabrication
[Myocardinal perfusion scintigraphy using a new technique, the mesh chamber]. Second year progress report, 1980, 11:38938 (R;US)

MUNICIPAL BUILDINGS
See PUBLIC BUILDINGS

MUNICIPAL WASTES
Combustion
Elemental composition of suspended particulate matter from the combustion of coal and coal/refuse mixtures, 11:37329 (J;US)
Modular systems for energy recovery from municipal waste, 11:38192 (R;US)
Combustion Products
Resource recovery from municipal solid waste. Bulletin, 11:38208 (R;US)
Energy Recovery
Modular systems for energy recovery from municipal waste, 11:38192 (R;US)
Forecasting
Study to develop a predicative technique for the estimation of collectible solid waste in the United States, 11:38884 (R;US)

MUON PROBES
Uses
Heavy fermion materials, 11:38247 (R;US)

MUON-CATALYZED FUSION
Muon-induced fusion: experiments at LAMPF, 11:39355 (R;US)

MUONS
See also MUONS PLUS
Photoproduction
Muon production by photons from Cygnus X-3, 11:39046 (J;US)
Radiation Flux
Muon fluence measurements at the site boundary for 1985, 11:37650 (R;US)
Spin-Spin Relaxation
New method to calculate the muon polarization function, 11:39282 (R;CA)
Weak Particle Decay
New results for rare muon decays, 11:39134 (R;US)

MUONS PLUS
Knight Shift
Muon spin relaxation and Knight shift in the heavy-fermion superconductor UPt_3, 11:38246 (R;US)
Radiative Decay
Search for rare muon and pion decay modes with the crystal box detector, 11:39133 (R;US)
Relaxation
Muon spin relaxation and Knight shift in the heavy-fermion superconductor UPt_3, 11:38246 (R;US)

MUTAGENS
Health Hazards
Carcinogenic and mutagenic compounds from energy generation - health effects, 11:38960 (R;NO)
MWPC
See MULTIWIRE PROPORTIONAL CHAMBERS
MX DEVICES

NATO
North Atlantic Treaty Organization.
Military Strategy
West European and East Asian perspectives on defense, deterrence, and strategy. Volume 2. Western European perspectives on defense, deterrence, and strategy. Technical report, 1 December 1982-15 May 1984, 11:38761 (R;US)
Nuclear Weapons
West European and East Asian perspectives on defense, deterrence, and strategy. Volume 2. Western European perspectives on defense, deterrence, and strategy. Technical report, 1 December 1982-15 May 1984, 11:38761 (R;US)
Security
West European and East Asian perspectives on defense, deterrence, and strategy. Volume 1. Main report. Technical report, 1 December 1982-15 May 1984, 11:39434 (R;US)
NATURAL CIRCULATION
See NATURAL CONVECTION
NATURAL CONVECTION
Heat Transfer
Application of flux-corrected transport (FCT) to high Rayleigh number natural convection in a porous medium, 11:38623 (R;US)
Buoyancy induced convection in a non-uniformly heated array of cubical elements on a vertical channel wall, 11:38626 (R;US)
NATURAL GAS
See also LIQUEFIED NATURAL GAS
Combustion Heat
New method for determining heats of combustion of gaseous hydrocarbons, 11:38534 (R;US)
Combustion Products
Environmental concerns related to natural gas vehicles, 11:37503 (BA;US)
Compressibility
Development of an equation of state for computation of supercompressibility factors, critical flow factors, and other properties for wet, sour natural gases, synthetic gases, and admixtures. Annual report, October 1984-September 1985, 11:37501 (R;US)
Equations of State
Development of an equation of state for computation of supercompressibility factors, critical flow factors, and other properties for wet, sour natural gases, synthetic gases, and admixtures. Annual report, October 1984-September 1985, 11:37501 (R;US)
Incremental-Cost Pricing
Agreement to provide energy planning, analysis, and evaluation, 11:37493 (R;US)
Multiphase Flow
On-line component ratio measurement of oil/gas/water mixtures using an admittance sensor, 11:37408 (RA;NO)
Phase Studies
Phase equilibria in the carbon dioxide + ethane system. Topical report, 11:37502 (R;US)
Reserves
Norwegian continental shelf - discoveries and related research challenges, 11:37394 (RA;NO)
Supply and Demand
Natural gas for continental Europe. Norwegian gas and implied aspects of energy politics, 11:37492 (RA;NO)
Transport
Analysis of accident data from plastic pipe natural gas distribution systems, 11:37498 (R;US)
Study compares hot-tap welding methods, 11:37500 (J;US)

Uses
Natural gas in novel processes for fuels and chemical feedstocks, 11:37491 (BA;US)

NATURAL GAS APPLIANCES
See GAS APPLIANCES

NATURAL GAS DEPOSITS
See also NATURAL GAS FIELDS
Exploitation
First call for tenders. Report from the Danish Ministry of Energy to the energy policy committee of the parliament according to subsection 2 of section 12 in the Underground Act, 11:37478 (R;DK;In Danish)
Improved offshore recovery. Pt. 5, 11:37414 (R;NO)
Underwater technology conference -84. Deep water technology, 11:37405 (R;NO)
Exploration
First call for tenders. Report from the Danish Ministry of Energy to the energy policy committee of the parliament according to subsection 2 of section 12 in the Underground Act, 11:37478 (R;DK;In Danish)
Frigg field: Production history and seismic response, 11:37487 (RA;NO)
Norwegian continental shelf - discoveries and related research challenges, 11:37394 (RA;NO)
Reduction of uncertainties by innovative reservoir geo-modelling. Pt. 4, 11:37395 (R;NO)
Selected papers from the annual meeting of the British Association for the Advancement of Science held at Strathclyde, Scotland, August 26-30, 1985, Section C, 11:37403 (R;US)
Resource Assessment
Technically recoverable Devonian Shale gas in Ohio, West Virginia, and Kentucky, 11:37469 (BA;US)
Seismic Surveys
Frigg field: Production history and seismic response, 11:37487 (RA;NO)

NATURAL GAS DISTRIBUTION SYSTEMS
Pipes
Analysis of accident data from plastic pipe natural gas distribution systems, 11:37498 (R;US)
Safety
Costs and benefits of excess-flow valves in gas-distribution services. Final report, March 1984-December 1985, 11:37499 (R;US)
Valves
Costs and benefits of excess-flow valves in gas-distribution services. Final report, March 1984-December 1985, 11:37499 (R;US)

NATURAL GAS FIELDS
Energy Source Development
Development of new oil and gas fields and the need for technological innovation, 11:37413 (RA;NO)
Field Production Equipment
Subsea production concepts for the Troll field, 11:37489 (RA;NO)
Geologic Models
Usage of palynostratigraphy and palynofacies in definition of Troll field geology, 11:37488 (RA;NO)
Meetings
Improved offshore recovery. Pt. 5, 11:37414 (R;NO)
Reduction of uncertainties by innovative reservoir geo-modelling. Pt. 4, 11:37395 (R;NO)
Resource Development
Petroleum developments offshore northern Norway, 11:37412 (RA;NO)
Troll development - the technological challenge, 11:37486 (RA;NO)
Resource Management
Uncertainties and innovation - management of northern offshore resources. Pt. 3, 11:37465 (R;NO)
Underwater Operations
Subsea production concepts for the Troll field, 11:37489 (RA;NO)

Parity violation in capture of polarized neutrons, 11:39186 (RA;US)
Charge-Exchange Reactions
$^{26}Al(n,p)^{26}Mg$ reaction: Comparison between the Hauser-Feshbach formula and the exact random-matrix result for the cross section, 11:39218 (J;US)
(n,p) reaction at zero degrees from ^{12}C, ^{13}C, ^{90}Zr, and ^{209}Bi at 65 MeV, 11:39215 (J;US)
Isospin effects in nuclear vibrations, 11:39269 (J;US)
Compound-Nucleus Reactions
$^{26}Al(n,p)^{26}Mg$ reaction: Comparison between the Hauser-Feshbach formula and the exact random-matrix result for the cross section, 11:39218 (J;US)
Neutron, alpha and total widths and spin assignments for resonances in $^{33}S+n$ from 10—400 keV, 11:39222 (J;US)
Elastic Scattering
Neutron scattering on deformed nuclei, 11:39216 (J;US)
Optical models from low-energy s-, p- and d-wave cross sections, 11:39224 (J;US)
Performing (p,n), (d,n) and (n,n) measurements with a rotating magnet beam swinger, 11:38707 (J;US)
Phenomenological mapping of the Fermi-surface anomaly with neutron-nucleus collisions, 11:39251 (J;US)
Scattering of polarized and unpolarized neutrons from ^{28}Si and ^{32}S, 11:39223 (J;US)
Inelastic Scattering
Measurement of nonelastic cross section for the elements Cu, Si at 14.9 MeV, 11:39273 (R;XA)
Neutron scattering on deformed nuclei, 11:39216 (J;US)
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
Phenomenological mapping of the Fermi-surface anomaly with neutron-nucleus collisions, 11:39251 (J;US)
Scattering of polarized and unpolarized neutrons from ^{28}Si and ^{32}S, 11:39223 (J;US)
Meetings
Investigation of fundamental interactions with cold neutrons. Proceedings of a workshop. NBS Special Publication 711, 11:39206 (R;US)
Optical Models
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
Optical models from low-energy s-, p- and d-wave cross sections, 11:39224 (J;US)
P Invariance
Parity violation in capture of polarized neutrons, 11:39186 (RA;US)
Potential Scattering
d/sub 5/2/-single particle strength in $^{48}Ca+n$, 11:39233 (J;US)
Energy dependence of the local optical potential for neutron-nucleus scattering, 11:39221 (J;US)
Resonance Scattering
Neutron, alpha and total widths and spin assignments for resonances in $^{33}S+n$ from 10—400 keV, 11:39222 (J;US)
Scattering
Optical model scattering functions for low energy neutrons on ^{86}Kr, 11:39237 (J;US)
T Invariance
Tests of T-invariance with slow neutrons, 11:39185 (RA;US)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Fabrication
Nuclear physics in the 10—300 MeV energy range using a pulsed white neutron source, 11:39210 (J;US)
NEUTRON STARS
Cosmic X-Ray Bursts
Resonant absorption, hot electrons, and cosmic gamma-ray bursts, 11:39055 (J;US)
Mass
Phase transitions in a saturating chiral theory of nuclear matter, 11:39202 (J;US)
NEUTRON-RICH ISOTOPES
Beta Decay
Beta decay of neutron-rich transuranic nuclei, 11:38783 (R;US)
NEUTRONS
See also COLD NEUTRONS
SLOW NEUTRONS

Beta Decay
Correlation coefficients in polarized neutron decay: experiments with PERKEO, 11:39143 (RA;US)
Determination of the neutron lifetime using e-p coincidence, 11:39139 (RA;US)
Determination of the neutron lifetime by counting trapped protons, 11:39140 (RA;US)
Implications of neutron beta-decay, 11:39137 (RA;US)
In-beam neutron lifetime measurements at the Institut Laue-Langevin, 11:39141 (RA;US)
Neutron lifetime measurements with bottled neutrons at ILL, 11:39142 (RA;US)
Review of the measurements of the neutron lifetime, 11:39138 (RA;US)
Electric Dipole Moments
Ultracold neutrons and the search for the electric dipole moment of the neutron, 11:39166 (RA;US)
Interferometry
Effective vibration isolation system for perfect-crystal neutron interferometry, 11:38721 (RA;US)
Long baseline neutron interferometry, 11:38720 (RA;US)
Long wavelength neutron interferometry, 11:38719 (RA;US)
Neutron interferometry: present status - future prospects, 11:39208 (RA;US)
Perfect crystal systems for advanced interferometer and resonator devices, 11:39209 (RA;US)
Lifetime
Determination of the neutron lifetime using e-p coincidence, 11:39139 (RA;US)
Determination of the neutron lifetime by counting trapped protons, 11:39140 (RA;US)
In-beam neutron lifetime measurements at the Institut Laue-Langevin, 11:39141 (RA;US)
Neutron lifetime measurements with bottled neutrons at ILL, 11:39142 (RA;US)
Review of the measurements of the neutron lifetime, 11:39138 (RA;US)
Physical Properties
Particle properties of the neutron, 11:39136 (RA;US)
Spin
PNC and TNC rotations of the neutron spin, 11:39187 (RA;US)

NEVADA
Air Quality
Methodology for designing air-quality-monitoring networks: 2. Application to Las Vegas, Nevada, for carbon monoxide, 11:38813 (R;US)

NEW MEXICO
Economy
New Mexico ethanol blended fuel economic impact study. Final report, 11:37706 (R;US)
Geothermal Resources
Present status of hot dry rock technology, 11:37816 (BA;US)
Uranium Mines
Lung cancer epidemiology in New Mexico uranium miners. Final technical report, 1 April 1983-15 May 1986, 11:37646 (R;US)

NEW YORK
Radioactive Waste Storage
Temporary storage of low-level radioactive waste in New York, 11:37576 (RA;US)
Remedial Action
Design report for the interim waste containment facility at the Niagara Falls Storage Site (Surplus Facilities Management Program), 11:37648 (R;US)

NGL
See NATURAL GAS LIQUIDS

NICKEL
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 11:39076 (R;US)
Atom Collisions
CO/sub 2/ laser sustained CW discharge atomic beam source, 11:39073 (R;US)
Biological Effects
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:38969 (J;NL)
Crystal Structure
Electron diffraction analysis of the pentagonal arrangement of grains found in CVD pure Ni films, 11:38294 (R;US)
Diffusion
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)
Gas Tungsten-Arc Welding
Welding procedure specification: gas tungsten arc welding of nickel. Supplement 1. Records of procedure qualification tests, 11:38273 (R;US)
Welding procedure specification: gas tungsten arc welding of nickel tonickel-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38282 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel, 11:38285 (R;US)
Ion Implantation
FIM/IAP/TEM studies of ion implanted nickel emitters, 11:38335 (J;US)
Pairing Interactions
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Photoemission
VUV synchrotron light as a technique for studying the interface quality and properties of thin overlayers, 11:38337 (J;US)
Sorptive Properties
Local surface structures of c(2 x 2) S/Ni(011) and (2 x 2) S/Ge(111) determined using ARPEFS, 11:38249 (R;US)
Trace contaminant removal from hot coal gas for molten carbonate fuel cell application. Final report, 11:38137 (R;US)
Structural Models
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Surface Properties
Electron spectroscopy in fundamental catalytic studies, 11:38295 (R;US)
Tissue Distribution
Nickel, 11:38936 (BA;NL)

NICKEL 57
Half-Life
Half life of sup(57)Ni, 11:39231 (J;CH)

NICKEL 58 TARGET
Neutron Reactions
Energy dependence of the local optical potential for neutron-nucleus scattering, 11:39221 (J;US)

NICKEL 60 TARGET
Neutron Reactions
Optical models from low-energy s-, p- and d-wave cross sections, 11:39224 (J;US)

NICKEL ALLOYS
See also ALLOY-A-286
CHROMIUM-NICKEL STEELS
HAYNES 25 ALLOY
KOVAR
NICKEL BASE ALLOYS
Auger Electron Spectroscopy
Auger and electron energy loss study of the electronic structure of U—M(M = Fe,Co,Ni) metallic glasses, 11:39092 (J;US)
Diffusion
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)
Energy-Loss Spectroscopy
Auger and electron energy loss study of the electronic structure of U—M(M = Fe,Co,Ni) metallic glasses, 11:39092 (J;US)
Phase Diagrams
Phase diagrams for Fe-Cr-Ni based alloys. Pt. 1. Phase diagrams for binary and ternary alloys of Fe, Cr and Ni with C and with Si, 11:38238 (R;DE)

Powder Metallurgy
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)
Synthesis
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)

NICKEL BASE ALLOYS
See also HASTELLOY B
HASTELLOY C
HASTELLOY N
INCONEL ALLOYS
INOR-8
MONEL
MONEL 400
Boron Additions
APFIM study of antiphase and grain boundaries in Ni_3Al, 11:38231 (R;US)
Corrosion
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
Creep
Effect of volume fraction and size of fine-gamma prime particles on raising the creep strength of a DS nickel-base superalloy, 11:38327 (TJ;US)
Gas Tungsten-Arc Welding
Gas tungsten arc welding of carbon steel to nickel-chromium-iron. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38289 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of nickel-copper, 11:38274 (R;US)
Mechanical Properties
Directionally solidified DS CM 247 LC - Optimized mechanical properties resulting from extensive gamma prime solutioning, 11:38331 (J;IT)
Microstructure
Directionally solidified DS CM 247 LC - Optimized mechanical properties resulting from extensive gamma prime solutioning, 11:38331 (J;IT)
Physical Radiation Effects
Radiation-induced segregation to grain boundaries in a Ni-Si alloy, 11:38235 (R;US)
Structural Chemical Analysis
Site occupations in Li_2 ordered alloys by axial electron channeling microanalysis (Ni_2AlX (X = Co, Hf, Fe)), 11:38234 (R;US)
Tensile Properties
Directionally solidified DS CM 247 LC - Optimized mechanical properties resulting from extensive gamma prime solutioning, 11:38331 (J;IT)

NICKEL COMPOUNDS
See also NICKEL OXIDES
Aerosols
Management of risk for industrial metallic aerosols. In vitro assessment of delivered dose per unit exposure, 11:38961 (R;DK)

NICKEL OXIDES
Catalytic Effects
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986, 11:37273 (R;US)
Crystal Structure
Role of Schottky disorder on the stability and structure of (100) twist grain boundaries in NiO, 11:38384 (J;US)

NICKEL-HYDROGEN BATTERIES
Electrodes
Lightweight nickel electrode for nickel hydrogen cells and batteries, 11:38073 (R;US)

NINE MILE POINT-2 REACTOR
Scriba, New York, USA
Risk Assessment
FSAR verification program, 11:38038 (J;US)

NIOBIUM
Tensile Properties
Effect of irradiation temperature and oxygen impurity on the yield strength of T(d,n) neutron irradiated niobium, 11:38291 (R;US)
Yield Strength
Effect of irradiation temperature and oxygen impurity on the yield strength of T(d,n) neutron irradiated niobium, 11:38291 (R;US)

NIOBIUM ALLOYS

NUCLEAR ENERGY
Standards
Nuclear energy standards. KWIC index, 11:37983 (R;US)
Progress in conversion of the Department of Energy nuclear standards to national consensus standards, 11:38102 (BA;US)

NUCLEAR ENGINEERING
Program Management
Developing a system engineering program to improve performance and reliability, 11:37905 (J;US)
Relocation of resources from the general office to the Palisades site, 11:37865 (J;US)
System engineering concept, 11:37864 (J;US)

NUCLEAR EXPLOSION DETECTION
Selected papers from the annual meeting of the British Association for the Advancement of Science held at Strathclyde, Scotland on August 26-30, 1985. Section A, 11:38100 (R;US)
Seismic Detection
Measurement of elastic properties and static strength. Final report, 1 July 1983-1 October 1984, 11:38784 (R;US)

NUCLEAR EXPLOSIONS
Specifically named single nuclear explosions are listed by name and the word EVENT, e.g., BOXCAR EVENT. All projects involving nuclear explosions are listed by the project name and the word PROJECT, e.g., PLOWSHARE PROJECT.
See also ARGUS EVENT
CASTLE PROJECT
CROSSROADS PROJECT
GREENHOUSE PROJECT
HARDTACK PROJECT
IVY PROJECT
JANGLE PROJECT
PLUMBBOB PROJECT
UPSHOT PROJECT
Blast Effects
Operation Sandstone. Nuclear explosions. 1948. Scientific Director's report of atomic weapon tests at Eniwetok, 1948. Annex 5, Part 1. Blast measurements summary report, 11:38764 (R;US)
Operation Hardtack. Project 1.9. Loading on buried simulated structures in high-overpressure regions. Report for April-October 1958, 11:38768 (R;US)
Contamination
Operation Jangle Project 2.0 - predicted scaling of radiological effects to operational weapons Report for October-November 1951, 11:38778 (R;US)
Craters
Operation Hardtack. Project 1.4. Physical characteristics of craters from near-surface nuclear detonations. Report for April-October 1958, 11:38767 (R;US)
Electromagnetic Radiation
Operation Argus. Surface measurements - project midas, 11:38774 (R;US)
Operation Castle. Project 7.1. Electromagnetic radiation calibration, Pacific {roving ground. Report for March-May 1954, 11:38775 (R;US)
Electrons
Operation Argus. Sounding rocket measurements - Project Jason, 11:38773 (R;US)
Energy Yield
Operation Greenhouse. Scientific Director's Report. Annex 1.12. Long-distance measurement of energy yield of an atomic explosion. Nuclear explosions 1951, 11:38779 (R;US)
Fallout
Operation Jangle Project 2.0 - predicted scaling of radiological effects to operational weapons Report for October-November 1951, 11:38778 (R;US)
Worldwide fallout from Operation Castle, 11:38765 (R;US)
Gamma Dosimetry
Operation Upshot-Knothole. Project 29.1. Comparison and evaluation of dosimetry methods applicable to gamma radiation, Nevada Proving Ground. Report for March-June 1953, 11:38777 (R;US)
Gamma Radiation
Operation Plumbbob. Program 2. Neutron and gamma radiation from Shot Laplace, 11:38781 (R;US)
Ionizing Radiations
Nuclear-weapon-effect research at PSR (Pacific-Sierra Research Corporation) - 1983. Volume 10. Symptomatology of acute radiation effects in humans after exposure to doses of 75 to 4500 rads (cGy) free-in-air. Final technical report, 27 October 1982-30 November 1983, 11:38762 (R;US)
Nuclear-weapon-effect research at PSR (Pacific-Sierra Research Corporation) - 1983. Volume 9. Acute radiation effects on individual crew member performance. Final technical report, 26 October 1982-30 November 1983, 11:38763 (R;US)
Neutron Flux
Operation Plumbbob. Program 2. Neutron and gamma radiation from Shot Laplace, 11:38781 (R;US)
Optical Properties
Operation Argus. Surface measurements - project midas, 11:38774 (R;US)
Photography
Operation Crossroads. Report of the Technical Director. Volume 2. Enclosures L thru R, 11:38771 (R;US)
Planning
Operation Castle. Operation Plan Number 1-53. Task Group 7.1, 11:38776 (R;US)
Pressure Measurement
Operation Hardtack. Project 1.9. Loading on buried simulated structures in high-overpressure regions. Report for April-October 1958, 11:38768 (R;US)
Radiation Injuries
Nuclear-weapon-effect research at PSR (Pacific-Sierra Research Corporation) - 1983. Volume 10. Symptomatology of acute radiation effects in humans after exposure to doses of 75 to 4500 rads (cGy) free-in-air. Final technical report, 27 October 1982-30 November 1983, 11:38762 (R;US)
Radiochemistry
Operation Ivy. Report of commander, Task Group 132.1. Pacific Proving Grounds. Joint Task Force 132, 11:38772 (R;US)
Radiology
Operation Ivy. Report of commander, Task Group 132.1. Pacific Proving Grounds. Joint Task Force 132, 11:38772 (R;US)
Seismic Waves
Measurement of elastic properties and static strength. Final report, 1 July 1983-1 October 1984, 11:38784 (R;US)
Shock Waves
Operation Crossroads. Report of the Technical Director. Volume 2. Enclosures L thru R, 11:38771 (R;US)
Thermal Radiation
Operation Sun Beam - Shot Little Feller I. Project Officers report - Project 8.1. High-time resolution of the first thermal pulse, 11:38766 (R;US)
Operation Hardtack. Projects 8.7/2.12d. Thermal radiation from very-low-yield burts, April-October 1958, 11:38782 (R;US)
Thermonuclear Reactions
Operation Ivy. Pacific Proving Grounds. Projects 2.1 to 2.4 and Project 2.6, measurements of reaction history. Volume 1. Summary of results. Final report, 11:38780 (R;US)
Underground Explosions
Operation Jangle Project 2.0 - predicted scaling of radiological effects to operational weapons Report for October-November 1951, 11:38778 (R;US)

NUCLEAR FACILITIES

NUCLEAR POWER PLANTS
Administrative Procedures
Procedural system for increased management control of nuclear operations, 11:37971 (J;US)
Buildings
Soil-structure interaction. Volume 3. Influence of ground water, 11:37998 (R;US)
Containment Systems
HECTR Version 1.5 user's manual, 11:38024 (R;US)
Soil-structure interaction effects on the reliability evaluation of reactor containments, 11:37993 (R;US)
Cost Estimation
Generic cost estimates. Abstracts from generic studies for use in preparing regulatory impact analyses, 11:37959 (R;US)
ECCS
Use of loop-seals for the control of the overpressures in hydraulic transients evolving in a sea service water system, 11:38017 (R;IT)
Economics
Evaluation of small reactor economics, 11:37974 (J;US)
Electrical Equipment
Integrating environmental qualification requirements into normal plant operations, 11:38000 (J;US)
Emergency Plans
Methodology for risk-based evaluation of emergency response planning, 11:38030 (J;US)
Planning and training in emergency preparedness, 11:38057 (J;US)
Training recommendations for ERG-based emergency operating procedures, 11:38058 (J;US)
Engineering Personnel
Engineering services to support operating nuclear power plants, 11:37961 (J;US)
Enriched Uranium
Prudent nuclear fuel procurement: responses to legal and economic uncertainties, 11:37968 (J;US)
Evaluation
INPO and the industry: a commitment to excellence, 11:37954 (J;US)
Financing
Major factors impacting costs of nuclear power plants, 11:37970 (J;US)
In-Service Inspection
ASME Code, Section XI. In-service inspection of nuclear power plant components. 1984-1985 revisions and updates. Final report, 11:37951 (R;US)
Inspection
Outage inspection program, 11:37966 (J;US)
Inventories
Concepts for reducing nuclear utility inventory carrying costs, 11:37967 (J;US)
Management
Road to excellence through industry self-management, 11:37956 (J;US)
Search for excellence: a progress report from the Swedish State Power Board, 11:37977 (J;US)
Self-regulation: the need to succeed, 11:37955 (J;US)
Taipower's philosophy and practices for management of its nuclear power development program, 11:37975 (J;US)
Mechanical Structures
Soil-structure interaction. Volume 3. Influence of ground water, 11:37998 (R;US)
Modifications
Regulatory approach for nuclear plant power uprating, 11:37957 (J;US)
Nuclear Engineering
Application of nuclear analysis methods for operating plant support, 11:37962 (J;US)
Operating Cost
Concepts for reducing nuclear utility inventory carrying costs, 11:37967 (J;US)
Personnel
Laser innovation: wallet-sized exposure history, training record, and identification, 11:38016 (J;US)
Managerial challenges in nuclear training, 11:37978 (J;US)
NRC's experiment with plant personnel training: the acid test of self-regulation, 11:37952 (J;US)
Pollution Control
Bond to deliver our nuclear projects from bondage, 11:37973 (J;US)
Power Generation
Power uprating for nuclear generating stations, 11:37964 (J;US)
Pressure Vessels
Stress relief cracking in nuclear pressure vessel steels. Final report, 11:37997 (R;US)

Productivity
Improved productivity in Electricite de France nuclear power plants, 11:37972 (J;US)
Quality Assurance
AIF programs supporting industry self-improvement, 11:37963 (J;US)
Design quality assurance for plant modifications, 11:38033 (J;US)
Developing indicators to measure the effectiveness of QA program management controls, 11:38035 (J;US)
Optimizing quality assurance program benefits through performance and reliability analysis, 11:38034 (J;US)
Quality surveillance at Duke Power operating nuclear stations, 11:37960 (J;US)
Reactor Components
Robust methods for failure rate estimation, 11:38031 (J;US)
Reactor Licensing
Power uprating for nuclear generating stations, 11:37964 (J;US)
Regulatory approach for nuclear plant power uprating, 11:37957 (J;US)
Technical specification improvement, 11:38040 (J;US)
Reactor Maintenance
Application of reliability-centered maintenance to nuclear power plants, 11:37965 (J;US)
Steam generator nozzle dam system, 11:37999 (J;US)
Reactor Materials
Stress corrosion characterization of turbine rotor materials. Phase 2. Final report, 11:37995 (R;US)
Stress relief cracking in nuclear pressure vessel steels. Final report, 11:37997 (R;US)
Reactor Operation

WASTE WATER

OIL SHALES
See also BLACK SHALES
In-Situ Retorting
GC/MS determination of amines, 11:37507 (BA;US)
Mutagenesis
Chemical basis for photomutagenicity in synthetic fuels, 11:38958 (R;US)

OIL SPILL FINGERPRINTING
See OIL SPILLS

OIL SPILLS
Experimental oil spill on Haltenbanken 1982, 11:37474 (R;NO)
Measurements of oil concentrations with fiberoptical transmittance meters at Haltenbanken June 1985, 11:37477 (R;NO)
Biodegradation
Composting of oil polluted sea-weed, 11:37471 (R;NO;In Norwegian and English)
Computerized Simulation
Environmental fate of PCBs in mineral oil spills, 11:37441 (RA;US)
Environmental Effects
Analysis of the Norway oil spill emergency preparedness-uncertainty, damage reduction, benefit. Main report, 11:37476 (R;NO;In Norwegian)
Computational model for the assessment of oil spill damages, 11:37475 (R;NO)
Mathematical Models
Computational model for the assessment of oil spill damages, 11:37475 (R;NO)
Pollution Control
Analysis of the Norway oil spill emergency preparedness-uncertainty, damage reduction, benefit. Main report, 11:37476 (R;NO;In Norwegian)
Waste Management
Composting of oil polluted sea-weed, 11:37471 (R;NO;In Norwegian and English)
Treatment of oil containing waste. Experiences with composting and disposal, 11:37472 (R;NO;In Norwegian)

OIL WELLS
Carbon Dioxide Injection
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Testing CO_2-foam for mobility control at Rock Creek, 11:37436 (BA;US)
Caustic Flooding
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Field Production Equipment
Gullfaks A - Subsea production, 11:37406 (RA;NO)
Flow Models
Analysis of interference pressure tests in naturally fractured reservoirs with macroscopic fracture and pore system permeabilities and unsteady interporosity flow, 11:37435 (BA;US)
Hydraulic Fracturing
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Microbial EOR
State-of-the-art review: microbial field technology. Topical report, Project BE3, 11:37430 (R;US)
Microemulsion Flooding
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Miscible-Phase Displacement
Improved offshore recovery. State-of-the-art, 11:37417 (RA;NO)
Production
Computer simulation program for reliability assessment of subsea oil/gas well cluster, 11:37407 (RA;NO)
Steam Injection
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Underwater Operations
Gullfaks A - Subsea production, 11:37406 (RA;NO)
Waterflooding
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Testing CO_2-foam for mobility control at Rock Creek, 11:37436 (BA;US)
Well Logging
Prediction techniques from logging tools: are the results confirmed by testing, 11:37398 (RA;NO)

OILS
See also FUEL OILS
INSULATING OILS
LUBRICATING OILS
PYROLYTIC OILS
Measuring Methods
Measurements of oil concentrations with fiberoptical transmittance meters at Haltenbanken June 1985, 11:37477 (R;NO)

Spray Cooling
Shower and high-pressure oil temperature control, 11:38627 (R;US)
OIL-WATER SEPARATORS
See SEPARATION EQUIPMENT
OMEGA FACILITY
Operation
Omega: A 24-beam UV irradiation facility, 11:39414 (BA;US)
ON-SITE POWER GENERATION
Power Losses
Simplified method to identify causes of PWR electrical output losses, 11:37919 (J;US)
ONTARIO
Acid Rain
Spatial trend analysis and uncertainty estimates of acid precipitation data in Ontario, 11:38846 (J;US)
OPERATION (REACTOR)
See REACTOR OPERATION
OPTICAL DISPERSION
Interferometers
Precise measurements of optical dispersion using a new interferometric technique, 11:39297 (J;US)
OPTICAL EQUIPMENT
Design
High-power target plane characterization diagnostics for the Nova laser, 11:39423 (BA;US)
Novel optical pin using microballons, 11:38570 (J;US)
Electro-Optical Effects
Development of a large-aperture PLZT shutter with enhanced operational/environmental capabilities, 11:38645 (R;US)
Fabrication
Novel optical pin using microballons, 11:38570 (J;US)
OPTICAL FIBERS
Magneto-Optical Effects
Fiber-optic heterodyne phase-shift measurement of plasma current, 11:39319 (J;US)
OPTICAL FILTERS
Electro-Optical Effects
Development of a large-aperture PLZT shutter with enhanced operational/environmental capabilities, 11:38645 (R;US)
OPTICAL MODELS
Random Phase Approximation
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
Scattering
Optical model scattering functions for low energy neutrons on ^{86}Kr, 11:39237 (J;US)
OPTICAL RADAR
LIDAR techniques for search and rescue, 11:38747 (BA;US)
OPTICAL SPECTROMETERS
Data Acquisition Systems
Laser measurements technique - laser spectroscopy in semiconductors, 11:38484 (BA;US)
OPTICS
Research Programs
Optics along the Rio Grande Research Corridor, 11:39298 (BA;US)
OREGON
Dams
Finding of no significant impact. Proposed fish passage improvements at Three Mile Falls Diverson Dam, Umatilla River, Oregon, 11:37727 (R;US)
Streams
Fisheries enhancement in the Fish Creek Basin: an evaluation of in-channel and off-channel projects, 1984. Annual report 1984, 11:38944 (R;US)
ORELA
Oak Ridge Electron Linear Accelerator.
Beam Currents
Calculated fraction of an incident current pulse that will be accelerated by an electron linear accelerator and comparisons with experimental data, 11:38691 (R;US)
ORGANIC BROMINE COMPOUNDS
Decomposition
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
Energy-Level Transitions
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
Ionization Potential
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
Thermodynamic Cycles
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
ORGANIC CHLORINE COMPOUNDS
See also CHLORINATED AROMATIC HYDROCARBONS
Decomposition
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
Energy-Level Transitions
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
Ionization Potential
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
Thermodynamic Cycles
Ionic and neutral decomposition of gaseous bromochloromethanes, 11:39093 (J;US)
Toxicity
Bioaccumulation of toxins from dredged materials from the port of Hampton Roads, Virginia. Final report for period ending November 1984, 11:38890 (R;US)
ORGANIC COMPOUNDS
See also ALDEHYDES
AMINES
AROMATICS
HYDROCARBONS
KETONES
ORGANIC NITROGEN COMPOUNDS
ORGANIC POLYMERS
PROTEINS
Density
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)
Ecological Concentration
Some new cost-effective approaches for measuring organics associated with hazardous wastes, 11:38892 (R;US)
Total volatile organic compounds (VOC) in the indoor air of east Tennessee homes, 11:38790 (R;US)
Emission
Characterization of organic emissions from selected materials in indoor use, 11:38812 (R;US)
Indoor Air Pollution
Characterization of organic emissions from selected materials in indoor use, 11:38812 (R;US)
Physical Properties
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Thermal Conductivity
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)
Thermodynamic Properties
Assessment of research and development in support of the PCT properties program for synthetic fuels technologies. Final report, 11:37263 (R;US)
Viscosity
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)
Water Pollution Control
Control of organic substances in water and waste water, 11:38900 (R;US)
ORGANIC INSULATORS
Physical Radiation Effects
Development of radiation-resistant organic insulators for magnetic fusion energy applications, 11:39420 (BA;US)
ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also CARBAMATES
NITRILES
NITRO COMPOUNDS
NITROSO COMPOUNDS

Chemical Reaction Kinetics
Kinetic energies released in the loss of nitrogen oxide from substituted nitroaromatic anions, 11:38518 (BA;US)
Decomposition
Kinetic energies released in the loss of nitrogen oxide from substituted nitroaromatic anions, 11:38518 (BA;US)

ORGANIC POLYMERS
See also COPOLYMERS
POLYISOPRENE
POLYVINYLS
RESINS
Fluorination
Effective antireflection coatings of transparent polymeric materials by gas-phase surface fluorination, 11:37807 (BA;US)

ORGDP
Radioactive Waste Management
Contaminated scrap metal management at the ORGDP - a problem solved, 11:37563 (RA;US)

ORNL
Radioactive Waste Disposal
Characteristics of the 3513 impoundment, 11:37611 (R;US)
Radioactivity
Historical releases of radioactivity to the environment from ORNL, 11:38853 (R;US)

ORNL ISOCHRONOUS CYCLOTRON
Computerized Control Systems
Operator interface to the ORIC control system, 11:38687 (BA;US)

OSCILLATIONS (PLASMA)
See PLASMA WAVES

OSCILLATORS
Computerized Simulation
Backward wave oscillators with rippled wall resonators: Analytic theory and numerical simulation, 11:38660 (BA;US)

OSMOSIS
Performance Testing
Pilot-scale reverse osmosis testing for the F and H Area Effluent Treatment Facility, 11:38895 (R;US)

OSWESO NUCLEAR POWER PLANT

Radiation Hardening
Generation of field-sensitive interface states in commercial CMOS devices. Technical report, 1 September 1983-15 May 1984, 11:38733 (R;US)

OXIDIZERS
Corrosive Effects
Laboratory study to evaluate the impact of NOx, SOx, and oxidants on the atmospheric corrosions of galvanized steel, 11:38290 (R;US)

OXIDIZING AGENTS
See OXIDIZERS

OXIDOREDUCTASES
Code number 1.
See also OXYGENASES
Tissue Distribution
Appearance and accumulation of C_4 carbon pathway enzymes in developing wheat leaves, 11:38924 (J;US)

OXYFLUORIDES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Vibrational States
Ab initio molecular orbital study of the vibrational frequencies of ONF and NOF, 11:38509 (BA;US)

OXYGEN
Atomic Beams
CO/sub 2/ laser sustained CW discharge atomic beam source, 11:39073 (R;US)
Biological Effects
Inhibition of mouse lung tumor development by hyperoxia, 11:38962 (J;US)
Chemisorption
Island coalescence in a chemisorbed overlayer, 11:38321 (J;US)
Testing site size requirements in chemisorption: Experiment and theory, 11:38498 (J;US)
Versatile data acquisition system for low-energy electron diffraction, 11:38743 (J;US)
Collisions
CO/sub 2/ laser sustained CW discharge atomic beam source, 11:39073 (R;US)
Desorption
Retention and thermal release of oxygen implanted in graphite, 11:38444 (J;US)
Electron-Molecule Collisions
Electron transport measurements in methane using an improved pulsed Townsend technique, 11:39080 (J;US)
Energy Levels
Energy levels of channeled ions, 11:39277 (J;US)
G Value
Radiolytic gas generation from cement-based waste hosts for DOE low-level radioactive wastes, 11:38401 (R;US)
Ignition
Methane oxidation behind reflected shock waves: ignition delay times measured by pressure and flame band emission, 11:38535 (R;US)
Infrared Spectra
Infrared spectra and structure of thin films of solid oxygen: A metastable phase, 11:38496 (J;US)
Ion Microprobe Analysis
Intervalence-band absorption saturation and optically induced damage of GaAs by pulsed CO_2 laser radiation, 11:38456 (BA;US)
Mass Spectroscopy
Intervalence-band absorption saturation and optically induced damage of GaAs by pulsed CO_2 laser radiation, 11:38456 (BA;US)
Phase Studies
Infrared spectra and structure of thin films of solid oxygen: A metastable phase, 11:38496 (J;US)
Removal
Deaeration of makeup water for LWRs, 11:37857 (R;US)
Spatial Distribution
Variability in the partial pressures of gases in the unsaturated zone adjacent to a low-level radioactive-waste disposal site near Sheffield, Illinois, 11:37587 (RA;US)

OXYGEN 16 REACTIONS
Elastic Scattering
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)

Fission
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
Heavy Ion Fusion Reactions
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
Transfer Reactions
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
OXYGEN 18
Microstructure
Structure of orange $^{18}O_2$ at 9.6 GPa and 297 K, 11:38466 (J;DK)
Optical Properties
Structure of orange $^{18}O_2$ at 9.6 GPa and 297 K, 11:38466 (J;DK)
OXYGEN 18 REACTIONS
Elastic Scattering
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
Heavy Ion Fusion Reactions
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
Pickup Reactions
One-nucleon-transfer reactions induced by 352-MeV ^{18}O on ^{28}Si, 11:39220 (J;US)
Stripping
One-nucleon-transfer reactions induced by 352-MeV ^{18}O on ^{28}Si, 11:39220 (J;US)
Transfer Reactions
Fusion, transfer, and elastic scattering at sub-barrier energies for /sup 16,18/O ions on ^{208}Pb and ^{15}N and ^{16}O ions on ^{209}Bi, 11:39250 (J;US)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN
OXYGEN HYDRIDES
See WATER
OXYGEN IONS
Collisions
Detection of surface glow related to spacecraft glow phenomena, 11:39094 (J;US)
OXYGENASES
Code number 1.13
Enzyme Activity
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:38969 (J;NL)
OZONE
Air Pollution
Guidelines for using OZIPM-3 with CBM-X or optional mechanisms. Volume 1. Description of the Ozone Isopleth plotting package, Version 3. Final report, August 1982-July 1985, 11:38810 (R;US)
Guidelines for using OZIPM-3 with CBM-X or optional mechanisms. Volume 2. Computer code. Final report, August 1982-July 1985, 11:38823 (R;US)
OZIPM-3 (Ozone Isopleth Plotting with optional mechanisms, Version 3) source code. Software, 11:38811 (R;US)
Trajectory analysis of ozone episodes at a rural site in Sibton, Suffolk - 1980-1983, 11:38804 (R;US)
Air Pollution Abatement
Analysis of the environmental need for NO/sub x/ controls on light duty trucks and heavy duty vehicles, 11:38851 (J;US)
Environmental Impacts
Analysis of the environmental need for NO/sub x/ controls on light duty trucks and heavy duty vehicles, 11:38851 (J;US)

P

P CODES
PRO/Mapper: a plotting program for the DEC PRO/300 personal computers utilizing the MAPPER graphics language, 11:37512 (R;US)
P INVARIANCE
Parity violation in proton-proton scattering at intermediate energies, 11:39184 (R;US)
Symmetry Breaking
Spontaneous breaking of parity in (2 + 1)-dimensional QED, 11:39189 (J;US)
PACIFIC OCEAN
See also PUGET SOUND
Sea Bed
Data report on sediment cores collected on cruise W8209-B, Pacific study area W-N (LLW Ocean Disposal Program), 11:39013 (R;US)
PAH

PARAFFINS
See ALKANES
PARALLEL PROCESSING
Algorithms
Parallel matrix computations. Interim report, 1983-1984, 11:39440 (R;US)
Sequential and parallel matrix computations. Interim report, 1 September 1984-31 August 1985, 11:39439 (R;US)
Using multiple inverted trees for parallel updating of graph properties. Technical report, 11:39438 (R;US)
Computerized Simulation
Partitioning and packing mathematical simulation models for calculation on parallel computers, 11:39443 (R;US)
PARITY NONCONSERVATION
See P INVARIANCE
PARTIAL DIFFERENTIAL EQUATIONS
L Codes
Quantitative assessment of the effect of partial pivoting in sparse ordinary differential equation solvers, 11:39302 (R;US)
PARTICLE BEAM FUSION ACCELERATOR
Beam Optics
Applied-B-italic ion diode experiments on the Particle Beam Fusion Accelerator-I, 11:39371 (J;US)
Ion Sources
Flashover lithium ion source development for large pulsed power accelerators, 11:39392 (J;US)
Operation
Applied-B-italic ion diode experiments on the Particle Beam Fusion Accelerator-I, 11:39371 (J;US)
Scaling Laws
Applied-B-italic ion diode experiments on the Particle Beam Fusion Accelerator-I, 11:39371 (J;US)
PARTICLE BEAMS
Focusing
Transverse field focused system, 11:38694 (P;US)
PARTICLE RESUSPENSION
Research Programs
Wind and saltation driven particle resuspension in a wind tunnel, 11:38844 (BA;US)
Simulation
Wind and saltation driven particle resuspension in a wind tunnel, 11:38844 (BA;US)
PARTICLE-INDUCED X-RAY EMISSION ANALYSIS
See X-RAY EMISSION ANALYSIS
PARTICLES
When appropriate use more specific terms listed under CHARGED PARTICLES, ELEMENTARY PARTICLES, and QUASI PARTICLES.
See also DROPLETS
PARTICULATES
Heat Transfer
Transfer rate calculations for compositionally dissimilar interacting particles, 11:38640 (J;GB)
Mass Transfer
Transfer rate calculations for compositionally dissimilar interacting particles, 11:38640 (J;GB)
Sizing
Optical particle counting, sizing, and velocimetry using intensity deconvolution, 11:37380 (J;US)
Solar Heating
Solar radiant processing of gas-particle systems for producing useful fuels and chemicals, 11:37796 (BA;US)
Velocity
Optical particle counting, sizing, and velocimetry using intensity deconvolution, 11:37380 (J;US)
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Aerosol Monitoring
Measurement of explosively generated aerosols in high energy environments, 11:38843 (BA;US)
Air Pollution Control
Power generation through coal gasification an overview of DOE-funded projects, 11:37838 (B;US)
Air Pollution Monitoring
Analysis of inhalable and fine particulate data and evaluation of their prediction models, 11:38857 (R;US)
Particulate entrainment by wind, 11:38842 (BA;US)
Combustion
Single-particle combustion of Beulah lignite char, 11:37367 (R;US)
Inhalation
Analysis of inhalable and fine particulate data and evaluation of their prediction models, 11:38857 (R;US)
Particle Size
Methods of depiciting the particle size properties of aerosols and powders, 11:38841 (BA;US)
Removal
Technical manual: hood system capture of process fugitive particulate emissions. Final report, September 1983-September 1985, 11:38818 (R;US)
Sedimentation
Some concepts to prevent the environmental effects of the peat production, 11:37301 (RA;SE)
Study of peat particle precipitation based on surface load theory, 11:37300 (RA;SE)
Temperature Measurement
Single-particle combustion of Beulah lignite char, 11:37367 (R;US)
Tissue Distribution
Distribution of label after intragastric administration of ^{7}Be-labeled carbon to weanling and aged mice, 11:38928 (J;US)
PASSIVE SOLAR COOLING SYSTEMS
Meetings
Progress in passive solar energy systems. Volume 8. Part 1, 11:37786 (R;US)
PASSIVE SOLAR HEATING SYSTEMS

Extraction
Effects of mire drainage and peat extraction on benthic invertebrates and fish, 11:37322 (RA;SE)
Fire Prevention
Fire prevention and control in connection with production and handling of peat, 11:37349 (RA;SE)
Prevention of fires and dust explosions at peat fired power plants, 11:37348 (RA;SE)
Fuel Feeding Systems
Constructional solutions of fuel handling equipment needed in heating plants using domestic fuel, 11:37357 (R;FI;In Finnish)
Gasification
Technical development in order to obtain satisfactory combustion, 11:37262 (RA;SE)
Harvesting
Aspects on the reclamation of cut-away bogs, 11:37391 (RA;SE)
Dustfalls in peat production and the utilization of peat, 11:37326 (RA;SE)
Peat-bog converted back to lake by planned harvesting, 11:37325 (RA;SE)
Some concepts to prevent the environmental effects of the peat production, 11:37301 (RA;SE)
Information
Russian handbook of peat. Translation of selected parts of the edition of 1984, 11:37261 (R;SE;In Swedish)
Manuals
Russian handbook of peat. Translation of selected parts of the edition of 1984, 11:37261 (R;SE;In Swedish)
Materials Handling
Fire prevention and control in connection with production and handling of peat, 11:37349 (RA;SE)
Meetings
Proceedings: Peat and the environment '85, 11:37333 (R;SE)
Mining
Environmental regulations to the development and utilization of Minnesota's peat resources - energy production, 11:37392 (RA;SE)
Multi-Element Analysis
Analysis of peat and its waste products, 11:37288 (RA;SE)
Pellets
Combustion tests of peat pellets by 20 kW test furnace, 11:37375 (R;FI;In Finnish)
Reduction of environmental consequences in space heating by using pellet burning technology, 11:37305 (RA;SE)
Physical Properties
Physical properties of peat related to the peatland type, 11:37285 (RA;SE)
Pollution Abatement
Development of environmental protection criteria and technologies for peat harvesting, processing and utilization in Canada, 11:37318 (RA;SE)
Processing
Russian handbook of peat. Translation of selected parts of the edition of 1984, 11:37261 (R;SE;In Swedish)
Production
Peat production studies and peat production monitoring in Sweden 1984, 11:37334 (RA;SE)
Quality Control
Quality determination of peat by means of a 19-channel near infrared instrument, 11:37295 (R;SE;In Swedish)
Sampling of solid indigenous fuels in Finland. Status report, 11:37746 (R;SE;In Swedish)
Quantitative Chemical Analysis
Uranium and trace elements in Swedish mires, 11:37286 (RA;SE)
Reprocessing
Back pressure drying of solid, moist fuels, 11:37359 (R;SE;In Swedish)
Research Programs
National energy administration - contributions and plans for development of peat land, 11:38109 (RA;SE)
Swedish peat research foundation (SST) - machinery and methods, 11:37258 (RA;SE)
Resource Assessment
Peat in Sweden - an important energy resource - or just a parenthesis, 11:37332 (RA;SE)
Resource Potential
Some environmental considerations in peat development in Indonesia, 11:37323 (RA;SE)
Sampling
Sampling of solid indigenous fuels in Finland. Status report, 11:37746 (R;SE;In Swedish)

Solar Drying
Investigation concerning spreading area, turning and the quality of the drying surface for drying course and production of sod peat, 11:37361 (R;SE;In Swedish)
Sorptive Properties
Peats and ferrites for heavy metal removal, 11:37622 (R;US)
Some applications of the use of peat in environmental problems, 11:37290 (RA;SE)
Spontaneous Combustion
Fire prevention and control in connection with production and handling of peat, 11:37349 (RA;SE)
Self-heating and self-ignition of peat during storage, 11:37347 (RA;SE)
Storage
Fire prevention and control in connection with production and handling of peat, 11:37349 (RA;SE)
Safe production and use of domestic fuels, part 2. Fire detectors, 11:37346 (R;FI;In Finnish)
Self-heating and self-ignition of peat during storage, 11:37347 (RA;SE)
Uses
Some applications of the use of peat in environmental problems, 11:37290 (RA;SE)
Swedish peat research foundation (SST) - machinery and methods, 11:37258 (RA;SE)
Water Pollution
Study of peat particle precipitation based on surface load theory, 11:37300 (RA;SE)
Water Removal
Problems of artificial peat dewatering, 11:37350 (RA;SE)
Treatability studies on two thermal peat dewatering schemes, 11:37351 (RA;SE)
Waste water characteristics of five peat dewatering processes, 11:37302 (RA;SE)
Wet Oxidation Processes
Treatability studies on two thermal peat dewatering schemes, 11:37351 (RA;SE)

PEATLANDS
See WETLANDS

PELLET INJECTION
Operation
Operation of a repeating pneumatic hydrogen pellet injector on the Tokamak Fusion Test Reactor, 11:39389 (J;US)
Performance
Operation of a repeating pneumatic hydrogen pellet injector on the Tokamak Fusion Test Reactor, 11:39389 (J;US)

PELLETS
See also FUEL PELLETS
Combustion
Combustion tests of peat pellets by 20 kW test furnace, 11:37375 (R;FI;In Finnish)
Reduction of environmental consequences in space heating by using pellet burning technology, 11:37305 (RA;SE)
Combustion Products
Reduction of environmental consequences in space heating by using pellet burning technology, 11:37305 (RA;SE)
Testing
Combustion tests of peat pellets by 20 kW test furnace, 11:37375 (R;FI;In Finnish)

PELLETS (FUEL)
See FUEL PELLETS

PENTAERYTHRITOL TETRANITRATE
See PETN

PENTANE
Nucleate Boiling
Effects of ambient pressure on the instability of a liquid boilng explosively at the superheat limit, 11:38630 (J;US)

PEOPLE

PEP STORAGE RINGS
Computerized Control Systems
Centralized digital control of accelerators, 11:38711 (BA;US)
Computerized Simulation
Models and simulations, 11:38709 (BA;US)
Mathematical Models
Models and simulations, 11:38709 (BA;US)

PERSONAL COMPUTERS
(Prior to April 1985 this information was indexed to microprocessors.)
Computer Graphics
PRO/Mapper: a plotting program for the DEC PRO/300 personal computers utilizing the MAPPER graphics language, 11:37512 (R;US)
P Codes
PRO/Mapper: a plotting program for the DEC PRO/300 personal computers utilizing the MAPPER graphics language, 11:37512 (R;US)

PERSONNEL
Studies of groups of persons employed in a particular field of endeavor. For studies on individuals in a group see also MAN.
See also MILITARY PERSONNEL
MINERS
REACTOR OPERATORS
Data Base Management
Laser innovation: wallet-sized exposure history, training record, and identification, 11:38016 (J;US)
Dose Rates
EXCOMP: an exposure comparison methodology, 11:37654 (R;US)
Injuries
Injury experience in nonmetallic mineral mining (except stone and coal), 1982, 11:38978 (R;US)
Injury experience in stone mining, 1982, 11:38979 (R;US)
Injury experience in sand and gravel mining, 1982, 11:38980 (R;US)
Injury experience in stone mining, 1983, 11:38981 (R;US)
Injury experience in metallic mineral mining, 1982, 11:38977 (R;US)
Summary of selected injury experience and worktime for the mining industry in the United States, 1931-77, 11:38976 (R;US)
Training
Managerial challenges in nuclear training, 11:37978 (J;US)
NRC's experiment with plant personnel training: the acid test of self-regulation, 11:37952 (J;US)

PERSONNEL MONITORING
Statistics
Comparing two Poisson populations sequentially: an application, 11:38950 (R;US)

PETALITE
Reflectivity
Crystal R/sub c/ calibrations with an uncollimated, point x-ray source, 11:38404 (R;US)

PETN
Decomposition
Detection of NO_2 from thermally aged PETN by laser induced fluorescence, 11:38753 (R;US)
Encapsulation
Surface characterization of an energetic material, pentaerythritoltetranitrate (PETN), having a thin coating achieved through a starved addition microencapsulation technique, 11:38516 (R;US)
Ion Scattering Analysis
Surface characterization of an energetic material, pentaerythritoltetranitrate (PETN), having a thin coating achieved through a starved addition microencapsulation technique, 11:38516 (R;US)
Nitrogen Dioxide
Detection of NO_2 from thermally aged PETN by laser induced fluorescence, 11:38753 (R;US)
Surface Properties
Surface characterization of an energetic material, pentaerythritoltetranitrate (PETN), having a thin coating achieved through a starved addition microencapsulation technique, 11:38516 (R;US)
X-Ray Spectroscopy
Surface characterization of an energetic material, pentaerythritoltetranitrate (PETN), having a thin coating achieved through a starved addition microencapsulation technique, 11:38516 (R;US)

PETRA STORAGE RING
Beam Dynamics
Calculation of polarization effects, 11:38699 (BA;US)

Polarized Beams
Calculation of polarization effects, 11:38699 (BA;US)
PETROCHEMICAL PLANTS
Heat Pipes
A computational model for predicting the life of tubes used in petro-chemical heater service, 11:37439 (BA;US)
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
Chemical Composition
Hydrocarbon displacement by carbon dioxide dispersions, 11:37429 (R;US)
Compressibility
Strategic Petroleum Reserve (SPR) creep-closure test on Sulphur Mines cavern 6, 11:37483 (R;US)
Density
Hydrocarbon displacement by carbon dioxide dispersions, 11:37429 (R;US)
Enhanced Recovery
Basic investigations for the appraisal of surfactant flooding media with the example of the ether carboxylates. Part 1 of DGMK-project 295 'Basical investigations for the selection and preparation of field application of tertiary oil recovery by chemical flooding'. Final report, 11:37420 (R;DE;In German)
Basical investigations for the selection and preparation of field application of tertiary oil recovery by chemical flooding. Final report, 11:37419 (R;DE;In German)
Investigation of surfactant retention. Part 3 of DGMK-project 295 'Basical investigations for the selection and preparation of field application of tertiary oil recovery by chemical flooding'. Final report, 11:37421 (R;DE;In German)
Physico-chemical investigations on polymer-flood media. Part 5 of DGMK-project 295 'Basical investigations for the selection and preparation of field application of tertiary oil recovery by chemical flooding'. Final report, 11:37422 (R;DE;In German)
Exports
Petroleum supply annual, 1985 Volume 2 (Contains glossary), 11:37468 (R;US)
Imports
Petroleum supply annual, 1985 Volume 2 (Contains glossary), 11:37468 (R;US)
Molecular Weight
Hydrocarbon displacement by carbon dioxide dispersions, 11:37429 (R;US)
Multi-Element Analysis
Evaluation of a direct injection nebulizer interface for flow injection analysis and high performance liquid chromatography with inductively coupled plasma-atomic emission spectroscopic detection, 11:38470 (R;US)
Multiphase Flow
On-line component ratio measurement of oil/gas/water mixtures using an admittance sensor, 11:37408 (RA;NO)
Pressure Measurement
Strategic Petroleum Reserve (SPR) creep-closure test on Sulphur Mines cavern 6, 11:37483 (R;US)
Production
Biological assessment of the effects of petroleum production at maximum efficient rate, Naval Petroleum Reserve No. 1 (Elk Hills), Kern County, California, on the endangered blunt-nosed leopard lizard, Gambelia silus, 11:37473 (R;US)
Petroleum supply annual, 1985 Volume 2 (Contains glossary), 11:37468 (R;US)
Reserves
Norwegian continental shelf - discoveries and related research challenges, 11:37394 (RA;NO)
Storage
Liquid storage tanks under vertical excitation, 11:37485 (BA;US)
Supply and Demand
Petroleum Supply Monthly, April 1986, 11:37467 (R;US)
Toxicity
Biological assessment of the effects of petroleum production at maximum efficient rate, Naval Petroleum Reserve No. 1 (Elk Hills), Kern County, California, on the endangered blunt-nosed leopard lizard, Gambelia silus, 11:37473 (R;US)
Two-Phase Flow
Permeability properties at 2-phase flow, 11:37432 (RA;DK;In Danish)
Viscosity
Hydrocarbon displacement by carbon dioxide dispersions, 11:37429 (R;US)
PETROLEUM COKE
See PETROLEUM PRODUCTS
PETROLEUM DEPOSITS

Stabilization
Convective stabilization of ionospheric plasma clouds. Memorandum report, 11:39057 (R;US)
Surface Potential
Equipotential surfaces in the Proto-Cleo Torsatron, 11:39320 (J;US)
Transport Theory
Study of plasma convection and wall interactions in magnetic confinement systems. Final report, December 1, 1984-February 28, 1986, 11:39311 (R;US)
Turbulence
The transition to turbulence in a beam plasma, 11:39335 (BA;US)
PLASMA CONFINEMENT
See also INERTIAL CONFINEMENT
Superconducting Magnets
Development of radiation-resistant organic insulators for magnetic fusion energy applications, 11:39420 (BA;US)
PLASMA DIAGNOSTICS
Study of plasma convection and wall interactions in magnetic confinement systems. Final report, December 1, 1984-February 28, 1986, 11:39311 (R;US)
Antennas
Application of time-domain spectroscopy to antenna impedance measurements in an isotropic plasma, 11:39345 (BA;US)
Bayard-Alpert Gages
Calibration and characterization of Bayard—Alpert gauges operating in high magnetic fields, 11:39401 (J;US)
Calorimeters
Characterization of the Tokamak Fusion Test Reactor plasma edge by Langmuir—calorimeter probes, 11:39327 (J;US)
Data Acquisition Systems
A survey of TFTR diagnostics, 11:39344 (BA;US)
Electric Probes
Electric probes in plasmas, 11:39326 (J;US)
The transition to turbulence in a beam plasma, 11:39335 (BA;US)
Electron Beams
Spatially and temporally resolved diagnostics for microsecond, intense electron beams, 11:39332 (BA;US)
Electron Cyclotron-Resonance
Performance analysis of the vertical viewing ECE diagnostic for non-thermal electron distribution measurement, 11:39346 (EA;US)
Electron Probes
Equipotential surfaces in the Proto-Cleo Torsatron, 11:39320 (J;US)
Fluorescence
Application of the resonant fluorescence method to the diagnostics of helium-like carbon in the T-10 tokamak, 11:39329 (TG;US)
Fluorescence Spectroscopy
Laser spectroscopy of sputtered atoms, 11:39325 (J;US)
Langmuir Probe
Characterization of the Tokamak Fusion Test Reactor plasma edge by Langmuir—calorimeter probes, 11:39327 (J;US)
Ion and electron parameters in the alcator C tokamak scrape-off region, 11:39310 (R;US)
Laser Spectroscopy
Laser spectroscopy of sputtered atoms, 11:39325 (J;US)
Mass Spectrometers
Long-term changes in the sensitivity of quadrupole mass spectrometers, 11:39323 (J;US)
Neodymium Lasers
Omega: A 24-beam UV irradiation facility, 11:39414 (BA;US)
Optical Equipment
High-power target plane characterization diagnostics for the Nova laser, 11:39423 (BA;US)
Optical Fibers
Fiber-optic heterodyne phase-shift measurement of plasma current, 11:39319 (J;US)
Pressure Gages
Operation of cold-cathode magnetron gauges in high magnetic fields, 11:39324 (J;US)
Probes
A direct indication of plasma potential diagnostic with fast time response and high accuracy based on a differential emissive probe, 11:39343 (BA;US)
Research Programs
A review of diagnostics for measuring local potentials and magnetic fields in high temperature plasma, 11:39347 (BA;US)
Resonance Ionization Mass Spectroscopy
Laser spectroscopy of sputtered atoms, 11:39325 (J;US)
Thermography
Infrared thermography of first wall components on the Tandem Mirror Experiment Upgrade, 11:39322 (J;US)
X-Ray Spectroscopy
X-ray diagnostics of tokamak plasmas, 11:39354 (J;US)
PLASMA DIODES
See THERMIONIC DIODES
PLASMA FOCUS DEVICES
Cathodes
Reduced variation in the neutron output of the dense plasma focus, 11:39411 (BA;US)
Materials Testing
Reduced variation in the neutron output of the dense plasma focus, 11:39411 (BA;US)
Neutron Emission
Reduced variation in the neutron output of the dense plasma focus, 11:39411 (BA;US)
PLASMA HEATING
See also HIGH-FREQUENCY HEATING
Alfven Waves
Papers contributed to the 13th European conference on controlled fusion and plasma physics by the TCA Group. Schliersee, Germany, April 1986, 11:39313 (R;CH)

Alpha Particles
Alpha particle density and energy distributions in tandem mirrors using Monte-Carlo techniques, 11:39316 (R;US)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA PRODUCTION
Accelerators
Progress in large-area, multiple-aperture acceleration of volume-produced H^- ions, 11:39333 (BA;US)
Anodes
Recent experiments on a magnetically insulated ion diode with an active anode plasma source, 11:39348 (BA;US)
Ion Sources
Effect of wall material on H^- production in a multicusp source, 11:39334 (BA;US)
Operation of the multicusp plasma generator as a high-charge-state ion source, 11:39349 (BA;US)
Thermionic Diodes
Recent experiments on a magnetically insulated ion diode with an active anode plasma source, 11:39348 (BA;US)

PLASMA (QUARK)
See QUARK MATTER

PLASMA SHEET
Electric Fields
ISEE observations of the plasma sheet boundary, plasma sheet, and neutral sheet: 1, Electric field, plasma, and ion composition, 11:39061 (J;US)
Ionic Composition
ISEE observations of the plasma sheet boundary, plasma sheet, and neutral sheet: 1, Electric field, plasma, and ion composition, 11:39061 (J;US)
Plasma Waves
ISEE observations of the plasma sheet boundary, plasma sheet, and neutral sheet: 2. Waves, 11:39062 (J;US)

PLASMA WAVES
Production
Ion-release experiments in the solar wind, 11:39044 (R;US)
Research Programs
An experimental study of plasma waves generated by co-linear optical mixing, 11:39337 (BA;US)
The transition to turbulence in a beam plasma, 11:39335 (BA;US)
Transfer Functions
Estimation of linear and quadratic transfer fuctions for fully developed turbulence, 11:39352 (BA;US)
Wave Propagation
An experimental study of plasma waves generated by co-linear optical mixing, 11:39337 (BA;US)

PLASMONS
Decay Instability
SATIN: a fluid code to study the nonlinear evolution of two-plasmon decay and stimulated Raman scattering, 11:39312 (R;US)

PLASTICS
See also LUCITE
MYLAR
POLYSTYRENE
Cocombustion
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 1. Technical results. Final report, July 1983-July 1984, 11:38806 (R;US)
Environmental assessment of a commercial boiler fired with a coal/waste plastic mixture. Volume 2. Data supplement. Final report, July 1983-July 1984, 11:38807 (R;US)

PLATES
Thicker than SHEETS or FOILS.
Heat Transfer
Fully developed combined heat and mass transfer natural convection between parallel plates with asymmetric boundary conditions, 11:38636 (B;US)
Mass Transfer
Fully developed combined heat and mass transfer natural convection between parallel plates with asymmetric boundary conditions, 11:38636 (B;US)
Natural Convection
Fully developed combined heat and mass transfer natural convection between parallel plates with asymmetric boundary conditions, 11:38636 (B;US)

PLATINUM
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 11:39076 (R;US)
Catalytic Effects
Exciting oxidation of CO on Pt, 11:39111 (J;NL)
Vibrational energy distribution of CO in the oxidation of C on Pt, 11:39101 (J;NL)
Pairing Interactions
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Photoemission
VUV synchrotron light as a technique for studying the interface quality and properties of thin overlayers, 11:38337 (J;US)
Physical Radiation Effects
Atomic resolution study of displacement cascades in ion-irradiated platinum, 11:38307 (J;US)
Sorptive Properties
Testing site size requirements in chemisorption: Experiment and theory, 11:38498 (J;US)
Structural Models
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Surface Properties
Study of hydroxyl formation on Pt(111) surface by EELS and low temperature reaction quenching, 11:38336 (J;NL)

PLATINUM ALLOYS
Electrochemistry
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)
Structural Chemical Analysis
Structure and activity of Pt-Co alloys as oxygen reduction electrocatalysts, 11:38139 (R;US)
Surface Properties
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)
Surface Treatments
Combined electrochemical/surface science investigations of Pt/Cr alloy electrodes, 11:38522 (J;US)

PLUGS
See CLOSURES

PLUMBBOB PROJECT
Nuclear Explosions
Operation Plumbbob. Program 2. Neutron and gamma radiation from Shot Laplace, 11:38781 (R;US)

PLUMES
Diffusion
Proceedings of the DOE/AMS air pollution model evaluation workshop. Volume 3. Summary, conclusions, and recommendations, 11:38786 (R;US)
Mathematical Models
Local scale plume model for nitrogen oxides. Model description, 11:38827 (R;SE)
Radionuclide Migration
Prediction of radiological dispersal from sabotage incidents involving high explosive, 11:38854 (R;US)

PLUTONIUM
Inventories
Use of storage tank holdup measurements to reduce inventory differences in an ion exchange process, 11:37676 (R;US)
Ion Exchange
Chloride anion exchange process for DOR and ER residue salts, 11:37621 (R;US)
Nuclear Materials Management
Rockwell Hanford Operations. Chemical processing monthly report, March 1986, 11:37513 (R;US)
Recovery
Actinide removal from nitric acid waste streams, 11:37620 (R;US)
Chloride anion exchange process for DOR and ER residue salts, 11:37621 (R;US)
Rockwell Hanford Operations. Chemical processing monthly report, March 1986, 11:37513 (R;US)

PLUTONIUM 237
Radioecological Concentration
Pu(V) as the stable form of oxidized plutonium in natural waters, 11:38912 (J;NL)
PLUTONIUM 238
Retention
Retention of 238Pu-bearing particles by corn plants, 11:38951 (J;US)
PLUTONIUM 239 TARGET
Neutron Reactions
Neutron scattering on deformed nuclei, 11:39216 (J;US)
PLUTONIUM BASE ALLOYS
Deposition
Loss of Ga in sputtered deposits made from a Pu-4 at. % Ga alloy, 11:38324 (J;US)
Sputtering
Loss of Ga in sputtered deposits made from a Pu-4 at. % Ga alloy, 11:38324 (J;US)
PLUTONIUM FLUORIDES
Fluorescence
Observation of rapid E-to-V energy transfer in the 2.3 μm laser-induced fluorescence of PuF_6 containing HF, 11:39083 (J;US)
Molecule-Molecule Collisions
Observation of rapid E-to-V energy transfer in the 2.3 μm laser-induced fluorescence of PuF_6 containing HF, 11:39083 (J;US)
PLUTONIUM ISOTOPES
See also PLUTONIUM 237
PLUTONIUM 238
Ground Disposal
Waste migration studies at the Savannah River Plant burial ground, 11:37538 (RA;US)
Nuclear Reaction Yield
Production of cold target-like fragments in the reaction of $^{48}Ca + ^{248}Cm$, 11:39254 (J;US)
PLZT
Electro-Optical Effects
Development of a large-aperture PLZT shutter with enhanced operational/environmental capabilities, 11:38645 (R;US)
Ion Implantation
Applications of photoferroelectric properties of electrooptic ceramics, 11:38449 (BA;US)
Photosensitivity
Applications of photoferroelectric properties of electrooptic ceramics, 11:38449 (BA;US)
Thermal Diffusivity
Applications of photoferroelectric properties of electrooptic ceramics, 11:38449 (BA;US)
PNA
See POLYCYCLIC AROMATIC HYDROCARBONS
POINT LEPREAU-1 REACTOR
St. John, New Brunswick, Canada
Performance
Search for excellence: a progress report on Point LePreau, 11:37934 (J;US)
POISEUILLE FLOW
See LAMINAR FLOW
POISONS (CHEMICAL)
See HAZARDOUS MATERIALS
POLARIMETERS
Sensitivity
Improvements in detectabilities in polarimeters using high-frequency modulation, 11:38746 (J;US)
POLARIZED BEAMS
Beam Production
Charge-transfer collisions for polarized ion sources, 11:39099 (J;US)
Developing a 500 eV proton beam, 11:39097 (J;US)
Lamb-shift sources: hopes and realities, 11:38708 (J;US)
Working group summary-lamb-shift sources, 11:39098 (J;US)
Ion Sources
Working group summary-lamb-shift sources, 11:39098 (J;US)
Lamb Shift
Developing a 500 eV proton beam, 11:39097 (J;US)
Lamb-shift sources: hopes and realities, 11:38708 (J;US)
Working group summary-lamb-shift sources, 11:39098 (J;US)
POLARIZED TARGETS
Fabrication
Nuclear spin polarization of solid deuterium—tritium, 11:39390 (J;US)
POLICY
See ENERGY POLICY
ENVIRONMENTAL POLICY
POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Environmental Transport
Field experiments to study the dispersion of air pollutants from the Andorra (Teruel) power plant. Plan, 11:38802 (R;NO)
Measurements of wind velocities in a street canyon, 11:38833 (J;GB)
Long-Range Transport
Meso - and synoptic-scale pollutant transport: Review of episode formation and transport meteorology, methods of analysis, and anatomy, 11:38849 (J;US)
POLLUTION
See also AIR POLLUTION
LAND POLLUTION
TRANSFRONTIER POLLUTION
WATER POLLUTION
Remote Sensing
Proceedings of the EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications, 11:38737 (R;FR)
POLLUTION ABATEMENT
Use this term for itmes that involve the prevention of pollutants at the source.
Global Aspects
Developments and trends in environmental protection, 11:38094 (R;DE;In German)
POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
See also AIR POLLUTION CONTROL
Financing
Bond to deliver our nuclear projects from bondage, 11:37973 (J;US)
POLLUTION CONTROL EQUIPMENT
See also AIR FILTERS
CATALYTIC CONVERTERS
ELECTROSTATIC PRECIPITATORS
SCRUBBERS
Design
Control of water infiltration through SLB trench covers, 11:37539 (RA;US)
Development of a spray - vacuum head and support system for the removal of PCB contamination from walls, floors, and other surfaces, 11:38869 (RA;US)
Nitrate waste processing by means of the joule-heated glass furnace, 11:37545 (RA;US)
Special Waste Form Lysimeters-Arid: annual report 1985, 11:37550 (RA;US)
Operation
Development of a spray - vacuum head and support system for the removal of PCB contamination from walls, floors, and other surfaces, 11:38869 (RA;US)
Performance Testing
Evaluation and performance of the special wasteform lysimeters at a humid site, 11:37549 (RA;US)
Thermal treatment of PCBs and PCB-contaminated soils, 11:37842 (RA;US)
POLOIDAL DIVERTOR EXPERIMENT
See PDX DEVICES
POLONIUM ISOTOPES
De-Excitation
Spectroscopy and measurement of electromagnetic moments in sup(198,200,210)Po, 11:39247 (R;DE)
Gyromagnetic Ratio
Spectroscopy and measurement of electromagnetic moments in sup(198,200,210)Po, 11:39247 (R;DE)
Quadrupole Moments
Spectroscopy and measurement of electromagnetic moments in sup(198,200,210)Po, 11:39247 (R;DE)

POLYACETYLENES
Conformational Changes
Order-disorder transitions of π-conjugated polymers in condensed phases. I. General theory, 11:38395 (J;US)
Electric Conductivity
Effect of chain rigidity on conductivity of conjugated polymers, 11:38393 (R;US)
Order-Disorder Transformations
Order-disorder transitions of π-conjugated polymers in condensed phases. I. General theory, 11:38395 (J;US)
Physical Properties
Physical characteristics of diblock polyacetylene copolymers: processability-conductivity correlation, 11:38394 (R;US)
POLYACRYLONITRILE

ORGANIC POLYMERS
POLYCYCLIC AROMATIC HYDROCARBONS
Carcinogenesis
Conformations of DNA adducts with polycyclic aromatic carcinogens, 11:38968 (BA;US)
Environmental nitroarenes: an attempt to understand their mutagenic and carcinogenic properties, 11:38808 (R;US)
Decomposition
Sampling and analysis criteria used to evaluate the efficacy of polychlorinated biphenyl (PCB) destruction, 11:38090 (RA;US)
Ecological Concentration
Screening polynuclear aromatic pollutants in ambient and indoor air by synchronous luminescence, 11:38791 (R;US)
Environmental Transport
Interactions between polycyclic aromatic hydrocarbons and dissolved humic material: binding and dissociation, 11:38907 (J;US)
Photolysis of polycyclic aromatic hydrocarbons adsorbed on simulated atmospheric particulates, 11:38839 (J;US)
Luminescence
A ranking tool for potentially carcinogenic polynuclear aromatic compounds in synfuel products, 11:38475 (J;US)
Lung Clearance
Correlation of the octanol/water partition coefficient with clearance halftimes of intratracheally instilled aromatic hydrocarbons in rats, 11:38967 (J;NL)
Mutagenesis
Environmental nitroarenes: an attempt to understand their mutagenic and carcinogenic properties, 11:38808 (R;US)
Photolysis
Photolysis of polycyclic aromatic hydrocarbons adsorbed on simulated atmospheric particulates, 11:38839 (J;US)
Sorption
Interactions between polycyclic aromatic hydrocarbons and dissolved humic material: binding and dissociation, 11:38907 (J;US)
Synthesis
Products of partial combustion of PCB alternative dielectric fluids, 11:37444 (RA;US)
Toxicity
Bioaccumulation of toxins from dredged materials from the port of Hampton Roads, Virginia. Final report for period ending November 1984, 11:38890 (R;US)
POLYCYCLIC NITRO COMPOUNDS
Carcinogenesis
Environmental nitroarenes: an attempt to understand their mutagenic and carcinogenic properties, 11:38808 (R;US)
Mutagen Screening
Mutagenicity of polycyclic aromatic compounds (PAC), identified in source emissions and ambient air, 11:38959 (R;NO)
Mutagenesis
Environmental nitroarenes: an attempt to understand their mutagenic and carcinogenic properties, 11:38808 (R;US)
POLYENES

Fracture Mechanics
Computational methods for fracture analysis of heavy-section steel technology (HSST) pressure vessel experiments (OCA/USA and ORMGEN/ADINA/ORVIRT computer codes), 11:37891 (J;NL)
PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS
PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS
PRIMARY COOLANT CIRCUITS
Cobalt 58
Evaluation of ^{58}Co behavior of an iron crud suppressed BWR, 11:37878 (J;US)
Corrosion Products
Chemical composition of crud deposits on BWR fuel surfaces, 11:37879 (J;US)
Evaluation of ^{58}Co behavior of an iron crud suppressed BWR, 11:37878 (J;US)
Water chemistry experience in current low-crud boiling water reactors, 11:37877 (J;US)
Electromagnetic Pumps
Examination and replacement of electromagnetic pumps from FFTF primary circuits, 11:38015 (J;US)
Hydraulics
Importance of momentum dynamics in BWR neutronic stability: experimental evidence, 11:37887 (J;US)
Pumps
Safety impact of mechanical- and maintenance-induced seal failures of reactor coolant pumps, 11:38026 (J;US)
Water Chemistry
Evaluation of ^{58}Co behavior of an iron crud suppressed BWR, 11:37878 (J;US)
Water chemistry experience in current low-crud boiling water reactors, 11:37877 (J;US)
PROBES
See also ELECTRIC PROBES
MUON PROBES
Design
Novel optical pin using microballons, 11:38570 (J;US)
Fabrication
Novel optical pin using microballons, 11:38570 (J;US)
PRODUCTION (HYDROGEN)
See HYDROGEN PRODUCTION
PRODUCTION (PLASMA)
See PLASMA PRODUCTION
PRODUCTION REACTORS
For the production of fissile materials only; see also IRRADIATION REACTORS.
Fuel Assemblies
Dynamic responses of fuel and target assemblies of a production reactor, 11:37982 (J;GB)
PRODUCTION RISERS
See MARINE RISERS
PROJECT (CASTLE)
See CASTLE PROJECT
PROJECT (CROSSROADS)
See CROSSROADS PROJECT
PROJECT (GREENHOUSE)
See GREENHOUSE PROJECT
PROJECT (HARDTACK)
See HARDTACK PROJECT
PROJECT (IVY)
See IVY PROJECT
PROJECT (JANGLE)
See JANGLE PROJECT
PROJECT (PLUMBBOB)
See PLUMBBOB PROJECT
PROJECT (UPSHOT)
See UPSHOT PROJECT
PROJECTILES
Oscillations
Projectile oscillations in augmented rail guns, 11:38552 (R;US)
PROMINENCES (SOLAR)
See SOLAR PROMINENCES
PROPAGATION (WAVE)
See WAVE PROPAGATION
PROPANE
Combustion Kinetics
Heat transfer during laminar flow flame quenching: effect of fuels, 11:38532 (R;US)
Combustion Properties
Cycle-resolved velocity and turbulence measurements in an IC engine with combustion, 11:38215 (B;US)
Spatial Distribution
Variability in the partial pressures of gases in the unsaturated zone adjacent to a low-level radioactive-waste disposal site near Sheffield, Illinois, 11:37587 (RA;US)
PROPELLANTS
Equations of State
Volumes and sound speeds of two gun propellants at high pressure, 11:38759 (J;DE)
Stresses
Volumes and sound speeds of two gun propellants at high pressure, 11:38759 (J;DE)
PROPERTIES (PHYSICAL)
See PHYSICAL PROPERTIES
PROTACTINIUM ISOTOPES
Nuclear Reaction Yield
Production of cold target-like fragments in the reaction of ^{48}Ca + ^{248}Cm, 11:39254 (J;US)
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE CLOTHING
Leak Testing
Evaluation and testing of totally encapsulating chemical protective suits, 11:38562 (R;US)
Performance Testing
Evaluation and testing of totally encapsulating chemical protective suits, 11:38562 (R;US)
PROTECTIVE COATINGS
Corrosion Resistance
Vacuum plasma spray turbine bucket coating development, 11:38329 (J;IT)
Mathematical Models
Rocket thrust chamber thermal barrier coatings. Final Report, December 1981-October 1984, 11:38354 (R;US)
Plasma Arc Spraying
Rocket thrust chamber thermal barrier coatings. Final Report, December 1981-October 1984, 11:38354 (R;US)
Vacuum plasma spray turbine bucket coating development, 11:38329 (J;IT)
Sorptive Properties
Functional pendent groups affecting chemisorption and adherent properties of polyelectrolyte-zinc phosphate composite conversion coatings, 11:38227 (R;US)
PROTEINS
See also LIPOPROTEINS

NUCLEOPROTEINS
Biosynthesis
Concomitant changes in high temperature tolerance and heat-shock proteins in desert succulents (Agave deserti, Carnegiea gigantea, Ferocactus acanthodes), 11:38955 (J;US)
Production
Purification of effluents from the wet-carbonization process of peat, 11:37304 (RA;SE)
PROTEOLIPIDS
See LIPOPROTEINS
PROTEUS REACTOR
Reactor Cells
New calculational method for the sensitivity coefficient in a cell, 11:38012 (J;US)
PROTO-CLEO STELLARATORS
Magnetic Flux
Magnetic flux surface mapping in the Proto-Cleo Stellarator, 11:39407 (BA;US)
Plasma Diagnostics
Equipotential surfaces in the Proto-Cleo Torsatron, 11:39320 (J;US)
PROTON BEAMS
Acceleration
Calculation of polarization effects, 11:38699 (BA;US)
Beam Production
Developing a 500 eV proton beam, 11:39097 (J;US)
Lamb-shift sources: hopes and realities, 11:38708 (J;US)
Working group summary-lamb-shift sources, 11:39098 (J;US)
Ion Sources
Working group summary-lamb-shift sources, 11:39098 (J;US)
Lamb Shift
Developing a 500 eV proton beam, 11:39097 (J;US)
Lamb-shift sources: hopes and realities, 11:38708 (J;US)
Working group summary-lamb-shift sources, 11:39098 (J;US)
Polarization
Working group summary-lamb-shift sources, 11:39098 (J;US)
Spin Orientation
Calculation of polarization effects, 11:38699 (BA;US)
PROTON REACTIONS
Charge-Exchange Reactions
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
Performing (p,n), (d,n) and (n,n) measurements with a rotating magnet beam swinger, 11:38707 (J;US)
Polarization transfer and the spin-parity composition of the charge-exchange continuum, 11:39228 (J;US)
Elastic Scattering
Few channel models of nuclear reactions: Proton and deuteron elastic scattering expansions, 11:39263 (J;US)
Three-particle systems at low and intermediate energies, 11:39211 (R;CA)
Fragmentation
Nuclear reactions of silver with 0.8-TeV protons, 11:39240 (J;US)
Inelastic Scattering
Cross section and analyzing power measurements for the giant resonance region in ^{208}Pb with 200-MeV protons, 11:39249 (J;US)
Inelastic proton excitation of high-lying giant resonances, 11:39239 (J;US)
Multipole matrix elements for ^{208}Pb, 11:39245 (R;US)
Multiple Production
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Optical Models
Few channel models of nuclear reactions: Proton and deuteron elastic scattering expansions, 11:39263 (J;US)
Nuclear structure approach to the imaginary optical potential and inelastic form factor, 11:39232 (J;US)
P Invariance
Parity violation in proton-proton scattering at intermediate energies, 11:39184 (R;US)
Pickup Reactions
Few channel models of nuclear reactions: Distorted-wave Born approximation for light-ion-induced transfer processes, 11:39264 (J;US)
Quasi-Elastic Scattering
Relativistic effects on spin observables in quasielastic proton scattering, 11:39248 (J;US)
PROTON-ANTIPROTON INTERACTIONS
Elastic Scattering
Do the cross sections for pp and p anti p continue to rise as $\log^2(s/s_0)$, 11:39135 (R;US)
Inclusive Interactions
Large missing psub(T) events and supersymmetry, 11:39181 (R;DE)
On the QCD 2->3 contributions to the hadroproduction of heavy quarks, 11:39165 (R;DE)
PROTON-PROTON INTERACTIONS
Elastic Scattering
Do the cross sections for pp and p anti p continue to rise as $\log^2(s/s_0)$, 11:39135 (R;US)
Pair Production
Production of the f^0 meson in the Double Pomeron Exchange reaction $pp->pp\pi^+\pi^-$ at $\sqrt{s}=62$ GeV, 11:39154 (J;DE)
PROTONS
Decay
Discriminating horizontal symmetries from operator analysis and proton-decay experiments, 11:39193 (J;US)
PROTOPLASTS
See PLANT CELLS
PROTOTYPE FAST REACTOR DOUNREAY
See PFR REACTOR
PSEUDOMONAS
Electrophoresis
Reversible and irreversible surface charge modification of bacteria for facilitating transport through porous media (Pseudomonas fluorescens), 11:37425 (RA;US)
Environmental Transport
Reversible and irreversible surface charge modification of bacteria for facilitating transport through porous media (Pseudomonas fluorescens), 11:37425 (RA;US)
Lysis
Interaction of Pseudomonas putida ATCC 12633 and bacteriophage gh-1 in Berea sandstone rock (Pseudomonas putida), 11:37427 (RA;US)
Migration
Interaction of Pseudomonas putida ATCC 12633 and bacteriophage gh-1 in Berea sandstone rock (Pseudomonas putida), 11:37427 (RA;US)
PUBLIC BUILDINGS
Energy Consumption
Energy redesign of the Hirshhorn Museum and Sculpture Garden, 11:38171 (R;US)
PUGET SOUND
Environment
Temporal trends of contamination of Puget Sound, 11:38902 (R;US)
PULMONARY CANCER
See CARCINOMAS
PULMONARY LAVAGE
See LUNGS
PULSE GENERATORS
See also HIGH-VOLTAGE PULSE GENERATORS
Alternators
Alternator-driven, magnetically switched modulator, 11:38654 (R;US)
Contained Explosions
Design of the Mark 101 magnetic flux compression generator, 11:38752 (R;US)
Design
Design of the Mark 101 magnetic flux compression generator, 11:38752 (R;US)
Magnetic Flux
Design of the Mark 101 magnetic flux compression generator, 11:38752 (R;US)
Semiconductor Switches
Engineering limits of photoconductive semiconductor switches in pulsed power applications, 11:38647 (R;US)
Switches
Alternator-driven, magnetically switched modulator, 11:38654 (R;US)

PULVERIZED FUEL ASH
See FLY ASH
PULVERIZED FUELS
Combustion
Combustion of pulverized coal in various atmospheres, 11:37363 (R;US)
PUMPS
See also ELECTROMAGNETIC PUMPS
VACUUM PUMPS
WIND-POWERED PUMPS
Calibration
Quality assurance program for field health laboratories, 11:37387 (R;US)
Field Tests
Field evaluation of gas-lift and progressive-cavity pumps as effective dewatering methods for coalbed methane wells. Final report, April 1984-December 1985, 11:37496 (R;US)
Operation
Operability predictions and results for the Liquid Sodium Breeder Reactor Primary Pump, 11:37943 (BA;US)
Performance Testing
Liquid Sodium Breeder Reactor Primary Pump water test dynamic analysis predictions and results, 11:37944 (BA;US)
Seals
Safety impact of mechanical- and maintenance-induced seal failures of reactor coolant pumps, 11:38026 (J;US)
PUREX PROCESS
Radioactive Waste Management
Process facility modifications project, Hanford Site. Draft environmental impact statement, 11:37638 (R;US)
Research Programs
Rockwell Hanford Operations. Chemical processing monthly report, March 1986, 11:37513 (R;US)
PURITY

WESTINGHOUSE STANDARD REACTOR
ZION-1 REACTOR
ZION-2 REACTOR
Deaerators
Deaeration of makeup water for LWRs, 11:37857 (R;US)
ECCS
Small inherently safe reactor with a passive ECCS, 11:38042 (J;US)
Fuel Assemblies
GEDEON 1: a first interpretation of a benchmark experiment for UO_2-Gd_2O_3 depletion in PWR assemblies, 11:37926 (J;US)
MICBURN-CASMO analysis of fuel with advanced gadolinia design, 11:37886 (J;US)
Use of gadolinium in PWR cores: the effects on local power and on nodal normalization, 11:37924 (J;US)
Use of UO_2-Gd_2O_3 in very low leakage, extended burnup fuel cycles, 11:37923 (J;US)
Utilization of gadolinium burnable poison for reactivity control of pressurized water reactors, 11:37925 (J;US)
Fuel Management
Use of UO_2-Gd_2O_3 in very low leakage, extended burnup fuel cycles, 11:37923 (J;US)
Fuel Pins
Use of a PDQ-8 depletion method for high-speed design accuracy, 11:37920 (J;US)
Loose Parts Monitoring
Artificial intelligence applications to the surveillance and diagnostics of nuclear power plants, 11:37916 (J;US)
Development of a loose parts detection and diagnostic system, 11:37876 (J;US)
Nondestructive Testing
EPRI nondestructive evaluation center: technology transfer to improve reliability, 11:37863 (J;US)
Nuclear Engineering
Relocation of resources from the general office to the Palisades site, 11:37865 (J;US)
Performance
Achievements in nuclear energy in the Federal Republic of Germany, 11:37872 (J;US)
Power Density
Use of gadolinium in PWR cores: the effects on local power and on nodal normalization, 11:37924 (J;US)
Power Generation
Impact of plant uprate on the balance-of-plant design of a PWR, 11:37907 (J;US)
Reactor Cooling Systems
Natural circulation integral reactor, 11:38044 (J;US)
Reactor Core Disruption
Changes in iodine volatility resulting from gamma irradiation of aqueous iodine solutions, 11:38050 (J;US)
Time dependence of the iodine partition coefficient in an unirradiated system, 11:38051 (J;US)
Reactor Kinetics
Calculation of neutron sources and spectra in a PWR fuel, 11:37928 (J;US)
Normalization of nodal models for reactor core analysis, 11:37884 (J;US)
QPANDA: an advanced nodal method for LWR analyses, 11:37880 (J;US)
Self-adjointness of the fast flux in a pressurized water reactor, 11:37921 (J;US)
Stochastic modeling of an at-power pressurized water reactor, 11:37922 (J;US)
Reactor Licensing
Identification of regulatory requirements that have marginal importance to risk, 11:38039 (J;US)
Impact of plant uprate on the balance-of-plant design of a PWR, 11:37907 (J;US)
Reactor Materials
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Reactor Operation
Search for excellence: a progress report from the Tokyo Electric Power Company, 11:37976 (J;US)
Reactor Safety
Identification of regulatory requirements that have marginal importance to risk, 11:38039 (J;US)
Natural circulation integral reactor, 11:38044 (J;US)
Small inherently safe reactor with a passive ECCS, 11:38042 (J;US)
Reliability
EPRI nondestructive evaluation center: technology transfer to improve reliability, 11:37863 (J;US)
Risk Assessment
PRA-based plant system reviews, 11:38029 (J;US)
Safety Engineering
Small inherently safe reactor without an ECCS, 11:38041 (J;US)

Scram
Reducing the frequency of scrams in US nuclear power plants, 11:37875 (J;US)
Secondary Coolant Circuits
Model of sludge behavior in nuclear plant steam generators. Final report, 11:37903 (R;US)
Surveillance
Artificial intelligence applications to the surveillance and diagnostics of nuclear power plants, 11:37916 (J;US)

PWR

See BW STANDARD REACTOR
41 TYPE REACTORS
See WESTINGHOUSE STANDARD REACTOR
80 TYPE REACTORS
See CE STANDARD REACTOR

PYRANOMETERS
Corrections
Empirical corrections to a rotating shadowband silicon cell pyranometer, 11:37729 (R;US)

PYRENE
Inhalation
Development of a dosimeter for personnel exposure to vapors of polyaromatic pollutants, 11:38838 (J;US)
Vapors
Development of a dosimeter for personnel exposure to vapors of polyaromatic pollutants, 11:38838 (J;US)

PYRITE
Moessbauer Effect
Report on DOE coal contract, 11:37291 (R;US)

PYRITES
See PYRITE

PYROCARBON
See PYROLYTIC CARBON

PYROLYSIS
Test Facilities
Pyrolysis and devolitalization, 11:37265 (R;US)

PYROLYSIS PRODUCTS
See also CHARS
PYROLYTIC OILS
Mass Spectroscopy
Characterization and pyrolysis of separated coal macerals, 11:37280 (J;NL)

PYROLYTIC CARBON
Deposition
Char consumption in the underground gasification of Eastern bituminous coal, 11:37277 (R;US)
Electron Spectra
Angular dependence of the auger lineshape of graphite, 11:38412 (R;US)

PYROLYTIC OILS
Chemical Composition
Pyrolysis and devolitalization, 11:37265 (R;US)

PYROXYLIN

PYRRHOTITE
Moessbauer Effect
Report on DOE coal contract, 11:37291 (R;US)

Q

QUAD CITIES-1 REACTOR
Cordova, Illinois, USA
Reactor Safety
Development of a scram reduction program, 11:38053 (J;US)
Scram
Development of a scram reduction program, 11:38053 (J;US)

QUAD CITIES-2 REACTOR
Cordova, Illinois, USA
Reactor Safety
Development of a scram reduction program, 11:38053 (J;US)
Scram
Development of a scram reduction program, 11:38053 (J;US)

QUADRUPOLE LINACS
Beam Emittance
Longitudinal emittance measurement at the ATS, 11:38689 (R;US)

QUALITY ASSURANCE
Program Management
Developing indicators to measure the effectiveness of QA program management controls, 11:38035 (J;US)
Quality surveillance at Duke Power operating nuclear stations, 11:37960 (J;US)
Three-level approach to quality programs for research, development and production, 11:39436 (R;US)

QUANTUM CHROMODYNAMICS
Glueballs
Strength of glueball interactions, 11:39163 (R;DE)
Particle Production
On the QCD 2->3 contributions to the hadroproduction of heavy quarks, 11:39165 (R;DE)
Residues
Energy and Regge residues in quantum-mechanical "QCD" sum rules, 11:39200 (J;US)
Scaling Laws
Measurement of the photon structure function $F_2 sup(\gamma)$ in the Q^2 range of 1.5-16 GeV^2, 11:39147 (R;DE;In German)
Two photon radiative widths of light mesons as a test of gauge theories with integrally charged quarks, 11:39160 (R;DE)
Sum Rules
Energy and Regge residues in quantum-mechanical "QCD" sum rules, 11:39200 (J;US)
Vacuum States
Non-perturbative contribution to the vacuum energy in supersymmetric QCD, 11:39182 (R;DE)

QUANTUM ELECTRODYNAMICS
P Invariance
Spontaneous breaking of parity in (2 + 1)-dimensional QED, 11:39189 (J;US)
Pair Production
In search of spontaneous positron creation, 11:39105 (J;US)
Radiative Corrections
Quantum-electrodynamic radiative corrections to the decay $\pi^0 \rightarrow \gamma e^+ e^-$, 11:39173 (J;US)
T Invariance
Spontaneous breaking of parity in (2 + 1)-dimensional QED, 11:39189 (J;US)

QUANTUM MECHANICS
Many-Body Problem
Class of exactly soluble many-body Hamiltonians, 11:39291 (J;US)
Wave Functions
Strategy for time-dependent quantum-mechanical calculations using a Gaussian wave-packet representation of the wave function. Annual technical report, 11:39287 (R;US)

QUARK MATERIAL
See QUARK MATTER

QUARK MATTER
Landau Damping
Quark-Gluon transport theory II. color response and color correlations in a Quark-Gluon plasma, 11:39201 (J;US)
Nuclear Properties
Nuclear-like states of quark matter, 11:39262 (R;US)
Response Functions
Quark-Gluon transport theory II. color response and color correlations in a Quark-Gluon plasma, 11:39201 (J;US)
Transport Theory
Quark-Gluon transport theory II. color response and color correlations in a Quark-Gluon plasma, 11:39201 (J;US)

QUARK MODEL
See also COLOR MODEL
STRING MODELS
Radiative Decay
Two photon radiative widths of light mesons as a test of gauge theories with integrally charged quarks, 11:39160 (R;DE)

QUARK PLASMA
See QUARK MATTER

QUARK SEA
See QUARK MATTER

QUARK-GLUON PLASMA
See QUARK MATTER
QUARTZ
Absorption Spectroscopy
MSHA's procedure for determining quartz content of respirable coal mine dust, 11:37340 (R;US)
Dissolution
Effect of silicate and aluminate ion adsorption on the reaction of quartz and alumina with caustic solution, 11:37431 (R;US)
Physical Radiation Effects
Effect of gamma irradiation on the strength of Climax stock quartz monzonite, 11:38413 (R;US)
Sorptive Properties
Effect of silicate and aluminate ion adsorption on the reaction of quartz and alumina with caustic solution, 11:37431 (R;US)
X-Ray Diffraction
MSHA's procedure for determining quartz content of respirable coal mine dust, 11:37340 (R;US)
QUINOLINES
Denitrification
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986 (1,2,3,4 tetrahydroquinoline, 2-propylaniline, quinoline cyclohexylamine and propylbenzene), 11:37273 (R;US)
Hydrogenation
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1986-March 31, 1986 (1,2,3,4 tetrahydroquinoline, 2-propylaniline, quinoline cyclohexylamine and propylbenzene), 11:37273 (R;US)
Inhalation
Development of a dosimeter for personnel exposure to vapors of polyaromatic pollutants, 11:38838 (J;US)
Soil Chemistry
Quinoline sorption to subsurface materials: role of pH and retention of the organic cation, 11:38880 (J;US)
Sorption
Quinoline sorption to subsurface materials: role of pH and retention of the organic cation, 11:38880 (J;US)
QUINONES
Mutagen Screening
Mutagenicity of polycyclic aromatic compounds (PAC), identified in source emissions and ambient air, 11:38959 (R;NO)

R

RADAR
See also OPTICAL RADAR
Technology Utilization
Radar technique for the measurement of dry matter content in wood fuels. Stage I, 11:37714 (R;SE;In Swedish)
RADIATION DAMAGE (BIOLOGICAL)

RADIATION HARDENING
Investigation of the basic mechanisms of radiation effects on electronic materials and devices and development of hardening techniques. Volume 1. Technical report, 1 January 1982-1 January 1983, 11:38734 (R;US)
RADIATION HYGIENE
See RADIATION PROTECTION
RADIATION INJURIES
Research Programs
AFRRI (Armed Forces Radiobiology Research Institute). Annual research report, 1 October 1984-30 September 1985, 11:38945 (R;US)
RADIATION PROTECTION
Reviews
Atoms, radiation and radiation protection, 11:39268 (B;US)
Standards
Atoms, radiation and radiation protection, 11:39268 (B;US)
RADIATION SAFETY
See RADIATION PROTECTION
RADIATIVE COOLING
Selective radiative cooling with MGO and/or LIF layers, 11:38359 (P;US)
RADIATORS
Limited to heat radiators.
Maintenance
Renovation of radiator systems. A report of a balancing project, 11:38176 (R;DK;In Danish)
RADICALS
Not to be used for compound descriptions.
See also HYDROXYL RADICALS
Combustion Kinetics
Kinetics of the reaction of NCO with ethene and oxygen over the temperature range 295-662K (NCO), 11:38537 (J;US)
RADIOACTIVE BIOLOGICAL WASTES
See RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Radioactive Waste Disposal
Evaluation and performance of the special wasteform lysimeters at a humid site, 11:37549 (RA;US)
Radionuclide Migration
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station - 1985. Appendices. Part II, 11:38911 (R;US)
RADIOACTIVE GASEOUS WASTES
See RADIOACTIVE WASTES
RADIOACTIVE MATERIALS
See also FISSION PRODUCTS
RADIOACTIVE WASTES
Air Transport
Shipment of radioactive materials by the US Department of Energy, 11:37519 (R;US)
Diffusion
Prediction of radiological dispersal from sabotage incidents involving high explosive, 11:38854 (R;US)
Maritime Transport
Shipment of radioactive materials by the US Department of Energy, 11:37519 (R;US)
Rail Transport
Shipment of radioactive materials by the US Department of Energy, 11:37519 (R;US)
Road Transport
Shipment of radioactive materials by the US Department of Energy, 11:37519 (R;US)
Transport
Estimated annual worldwide shipments of radioactive material, 11:37524 (R;US)
Experimental and numerical comparisons of low-speed impact and punching of woven Aramid panels, 11:37526 (BA;US)
Transportation Systems
DOE/PNC joint program on transportation technology, 11:37523 (R;US)
RADIOACTIVE PARTICULATES
See PARTICLES
RADIOACTIVE TRACERS
See RADIOPHARMACEUTICALS
RADIOACTIVE WASTE DISPOSAL
Coverings
Groundwater modeling for uranium mill tailings sites, 11:37659 (BA;US)
Global Aspects
Worldwide low-level waste disposal practices, 11:37566 (RA;US)
Information Systems
Regional treatment/disposal information system, 11:37577 (RA;US)

Legislation
Monitoring low-level waste allocations for compliance with limited availability provisions during transition and licensing periods, 11:37578 (RA;US)
M Codes
Intruder dose pathway analysis code for onsite land disposal, 11:37595 (RA;US)
Nuclear Data Collections
Maxey Flats Nuclear Waste Disposal Site in situ waste grouting demonstration - results to date, 11:37583 (RA;US)
Radiation Hazards
Environmental pathway models for estimating population health effects from disposal of high-level radioactive waste in geologic repositories. Final report, 11:37649 (R;US)
Radionuclide Migration
Hydrologic site characterization - the UMTRA project approach, 11:37634 (BA;US)
Regulations
Update of Part 61 impacts analysis methodology, 11:37667 (RA;US)
Research Programs
Development of technology for the design of shallow land burial facilities at arid sites, 11:37541 (RA;US)
DOE's low-level waste disposal site transfer program: a status update, 11:37575 (RA;US)
Interim management and site stabilization at a closed commercial shallow land burial facility, 11:37582 (RA;US)
Leaching studies of low-level radioactive waste forms, 11:37551 (RA;US)
Long-term monitoring for closed sites, 11:37556 (RA;US)
Site Selection
Disposal Site Information Management System, 11:37580 (RA;US)
DOE's low-level waste disposal site transfer program: a status update, 11:37575 (RA;US)
Interim management and site stabilization at a closed commercial shallow land burial facility, 11:37582 (RA;US)
Long-term monitoring for closed sites, 11:37556 (RA;US)
Standards
Future directions for the US Nuclear Regulatory Commission's low-level waste management program, 11:37666 (RA;US)
Overview of EPA's Low-Level Radioactive Waste Standards development program, 1985, 11:37665 (RA;US)
Sensitivity analyses of EPA's codes for assessing potential health risks from disposal of low-level wastes, 11:37589 (RA;US)
Technology Assessment
Technology application of enhanced engineered disposal, 11:37533 (RA;US)

RADIOACTIVE WASTE FACILITIES
Closures
Salt repository sealing materials development program: 5-year work plan, 11:37528 (R;US)
Construction
Greater confinement disposal program at the Savannah River Plant, 11:37561 (RA;US)
Design
Challenges of new low-level radioactive waste facility development, 11:37531 (RA;US)
Design, siting, criteria and cost analysis for a small low-level waste disposal facility, 11:37542 (RA;US)
Development of technology for the design of shallow land burial facilities at arid sites, 11:37541 (RA;US)
Evaluation and design of drained low-level radioactive disposal sites. Final report, 11:37599 (R;US)
Geotechnical engineering considerations in the NRC's review of uranium mill tailings remedial action plans, 11:37664 (BA;US)
Liquid disposal site void fill and isolation: systems description, 11:37585 (RA;US)
Low-level nitrate waste process development, 11:37548 (RA;US)
Methodology for performing parallel design calculations (nuclear waste repository application), 11:37624 (R;US)
Pathways analyses and their role in the decision making process for selection of low-level waste disposal sites, 11:37662 (BA;US)
Temporary storage of low-level radioactive waste in New York, 11:37576 (RA;US)
Electromagnetic Surveys
Surface geophysics at the UMTRA project site in Lakeview, Oregon, 11:37633 (BA;US)
Environmental Impacts
Technical correspondence in support of the final environmental assessment (NNWSI Project), 11:37643 (R;US)
Hydrology
Evaluating geomorphic hazards from river behavior -- Durango, Riverton, and Gunnison UMTRA Project sites, 11:38914 (BA;US)
Evaluation of geotechnical and geohydrologic criteria for potential disposal areas, 11:37631 (BA;US)
Groundwater modeling for uranium mill tailings sites, 11:37659 (BA;US)
Hydrologic site characterization - the UMTRA project approach, 11:37634 (BA;US)
Modeling flood events for long-term stability, 11:37632 (BA;US)
Surface geophysics at the UMTRA project site in Lakeview, Oregon, 11:37633 (BA;US)
The effects of column dimensions on uranium mill tailings leach curves, 11:37645 (BA;US)
Uranium isotope distribution in ground water at the Shiprock Mill site, 11:38913 (BA;US)
Operation
Liquid disposal site void fill and isolation: systems description, 11:37585 (RA;US)
Pilot Plants
Process Experimental Pilot Plant, 11:37606 (R;US)
Remote Handling Equipment
Device to upright fallen waste canisters at the WVDP. Final report, 11:37598 (R;US)
Research Programs
Virginia public participation program, 11:37573 (RA;US)
Resistivity Surveys
Surface geophysics at the UMTRA project site in Lakeview, Oregon, 11:37633 (BA;US)
Site Selection
Alternate site selection process for the UMTRA project site in Lakeview, Oregon, 11:37661 (BA;US)
Challenges of new low-level radioactive waste facility development, 11:37531 (RA;US)
Decision process for siting low-level radioactive waste disposal facilities: a role for the public, 11:37571 (RA;US)
Design, siting, criteria and cost analysis for a small low-level waste disposal facility, 11:37542 (RA;US)
Disposal facility, host state and site selection process in the Southeast Compact, 11:37567 (RA;US)
Evaluation of geotechnical and geohydrologic criteria for potential disposal areas, 11:37631 (BA;US)
Pathways analyses and their role in the decision making process for selection of low-level waste disposal sites, 11:37662 (BA;US)
Public participation - an approach in the Central Midwest region, 11:37570 (RA;US)
Site descriptions: Cypress Creek, Davis Canyon, Deaf Smith, Hanford Reference, Lavender Canyon, Richton Dome, Swisher, Vacherie Dome, Yucca Mountain. Revision, 11:37602 (R;US)
Siting simulation for low-level waste disposal facilities, 11:37572 (RA;US)
Slope Stability
Evaluation of geotechnical and geohydrologic criteria for potential disposal areas, 11:37631 (BA;US)
Technology Assessment
Technology, socio-political acceptance, and the low-level radioactive waste disposal facility, 11:37569 (RA;US)

RADIOACTIVE WASTE MANAGEMENT
Selected papers from the annual meeting of the British Association for the Advancement of Science held at Strathclyde, Scotland on August 26-30, 1985. Section A, 11:38100 (R;US)

Government Policies
UK management of low-level radioactive wastes, 11:37536 (RA;US)
Information Systems
Common data system for low-level waste management, 11:37579 (RA;US)
Mathematical Models
Regional treatment/disposal information system, 11:37577 (RA;US)
Nuclear Data Collections
Development of a plan for a national LLW information management system based on data acquired from a uniform manifest, 11:37581 (RA;US)
Research Programs
Considerations of Department of Energy low-level waste management programs, 11:37530 (RA;US)
DOE low-level waste management - an evolving system, 11:37532 (RA;US)
Waste management research abstracts No. 16. Information on radioactive waste programmes in progress, 11:37607 (R;US)

RADIOACTIVE WASTE PROCESSING
Information Systems
Regional treatment/disposal information system, 11:37577 (RA;US)
Research Programs
Nuclear waste treatment program. Annual report for FY 1985, 11:37614 (R;US)

RADIOACTIVE WASTE STORAGE
See also MONITORED RETRIEVABLE STORAGE
Environmental Impacts
Preliminary examination of the impacts of repository site characterization activities and facility construction and operation activities on Hanford air quality, 11:37613 (R;US)
Thermal Stresses
Steady-state response of an elastic half space containing a point source of heat. Research report, 11:37612 (R;US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Ground Disposal
Intruder dose pathway analysis code for onsite land disposal, 11:37595 (RA;US)
Radioactive Waste Disposal
Pad A - an exercise in site stabilization, 11:37669 (RA;US)
Update of Part 61 impacts analysis methodology, 11:37667 (RA;US)
Threshold Dose
Threshold guidance update, 11:37555 (RA;US)

RADIOACTIVITY TRANSPORT
Mathematical Models
Analytic solution to the time-dependent first-daughter fission-product plateout problem for multi-region isothermal slug flow, 11:37992 (J;GB)

RADIOBIOLOGICAL EFFECTS
See BIOLOGICAL RADIATION EFFECTS

RADIOBIOLOGY
Research Programs
AFRRI (Armed Forces Radiobiology Research Institute). Annual research report, 1 October 1984-30 September 1985, 11:38945 (R;US)
Report of activities 1947-1985, 11:38946 (R;US)

RADIOCARBON DATING
See CARBON 14

RADIODIAGNOSIS (RADIONUCLIDES)
See NUCLEAR MEDICINE

RADIOIMMUNOASSAY
Studies on the immunochemical techniques for detection of selected fungal and dinoflagellate toxins. Annual progress report No. 2, 1 August 1982-31 July 1983, 11:38939 (R;US)

RADIOISOTOPE HEAT SOURCES
Thermal Insulation
Carbon-bonded carbon fiber insulation for radioisotope space power systems, 11:37691 (J;US)

RADIOISOTOPE MIGRATION
See RADIONUCLIDE MIGRATION

RADIOISOTOPE-LABELLED DRUGS
See RADIOPHARMACEUTICALS

RADIOISOTOPES
See also NEUTRON-RICH ISOTOPES
Isotope Production
Nuclear reactions of silver with 0.8-TeV protons, 11:39240 (J;US)

RADIOLOGICAL PROTECTION
See RADIATION PROTECTION

RADIONUCLIDE MIGRATION
In environment.
C Codes
Preliminary examination of the impacts of repository site characterization activities and facility construction and operation activities on Hanford air quality, 11:37613 (R;US)
F Codes
Sediment and contaminant transport in a marine environment, 11:38908 (R;US)
H Codes
Preliminary examination of the impacts of repository site characterization activities and facility construction and operation activities on Hanford air quality, 11:37613 (R;US)
Mathematical Models
Field studies and modeling of chemical processes in the unsaturated zone, 11:37559 (RA;US)
Modeling study of solute transport in the unsaturated zone. Information and data sets. Volume 1, 11:37642 (R;US)
Radionuclide migration in groundwater at a low-level waste disposal site: a comparison of predictive performance modeling versus field observations, 11:37594 (RA;US)

RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

RADIONUCLIDES
See RADIOISOTOPES

RADIOPHARMACEUTICALS
Chemical Preparation
Preparation of gallium-68 radiopharmaceuticals for positron tomography. Progress report, November 1, 1983-May 31, 1986, 11:38937 (R;US)

RADIOWAVE RADIATION
See also SOLAR RADIO BURSTS
Absorption
Radio-frequency-induced current and transport in toroidal plasmas, 11:39317 (J;US)
Biological Radiation Effects
Improved technique for monitoring electrocardiograms during exposure to radio-frequency radiation, 11:38973 (R;US)

RADIUM 226
Radioecological Concentration
^{226}Ra uptake by sagebrush from uniform and non-uniform soil amendments, 11:38953 (J;GB)
Radiological characterization requirements for planning remedial action at UMTRA project sites, 11:37660 (BA;US)
Uptake
^{226}Ra uptake by sagebrush from uniform and non-uniform soil amendments, 11:38953 (J;GB)

RADIUM ISOTOPES
See also RADIUM 226
Nuclear Reaction Yield
Production of cold target-like fragments in the reaction of ^{48}Ca + ^{248}Cm, 11:39254 (J;US)

RADON
Investigation of radon and helium as possible fluid-phase precursors to earthquakes. Technical report, 11:38992 (R;US)
Daughter Products
Procedure manual for the estimation of average indoor radon-daughter concentrations using the radon grab-sampling method, 11:37651 (R;US)

RADON 222
Radiation Hazards
Lung cancer epidemiology in New Mexico uranium miners. Final technical report, 1 April 1983-15 May 1986, 11:37646 (R;US)
Radioecological Concentration
Radiological characterization requirements for planning remedial action at UMTRA project sites, 11:37660 (BA;US)

Spatial Distribution
Variability in the partial pressures of gases in the unsaturated zone adjacent to a low-level radioactive-waste disposal site near Sheffield, Illinois, 11:37587 (RA;US)

RADON ISOTOPES
See also RADON 222
Nuclear Reaction Yield
Production of cold target-like fragments in the reaction of $^{48}Ca + ^{248}Cm$, 11:39254 (J;US)

RAILGUN ACCELERATORS
Fabrication
Observation of diminished railgun performance -- possible causes and solutions, 11:39409 (BA;US)
Performance Testing
Observation of diminished railgun performance -- possible causes and solutions, 11:39409 (BA;US)
Projectiles
Projectile oscillations in augmented rail guns, 11:38552 (R;US)

RAMAN SPECTROSCOPY
Prior to March 1983 this concept was indexed to RAMAN SPECTRA.
Double Resonance Methods
Ionization detection of stimulated Raman spectra, 11:38483 (BA;US)
Resolution
Ionization detection of stimulated Raman spectra, 11:38483 (BA;US)
Sensitivity
Ionization detection of stimulated Raman spectra, 11:38483 (BA;US)
Signal-to-Noise Ratio
Quantitative species concentration measurements using coherent anti-Stokes Raman spectroscopy with nonresonant susceptibility normalization, 11:38480 (BA;US)

RANCHO SECO-1 REACTOR
Sacramento, California, USA
Environment
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station, 1985, 11:38910 (R;US)
Radioactive Effluents
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station - 1985. Appendices. Part II, 11:38911 (R;US)
Radioecology
Environmental radiological studies downstream from Rancho Seco Nuclear Power Generating Station, 11:38909 (R;US)
Rancho Seco liquid effluent pathway aquatic and terrestrial dietary survey report, 11:38882 (R;US)
Reactor Fueling
Evolution of an outage management organization in a small utility, 11:37908 (J;US)

RANCHO SECO-2 REACTOR
Sacramento, California
Environment
Environmental radiological studies downstream from the Rancho Seco Nuclear Power Generating Station, 1985, 11:38910 (R;US)
Radioecology
Environmental radiological studies downstream from Rancho Seco Nuclear Power Generating Station, 11:38909 (R;US)
Rancho Seco liquid effluent pathway aquatic and terrestrial dietary survey report, 11:38882 (R;US)
Reactor Fueling
Evolution of an outage management organization in a small utility, 11:37908 (J;US)

RARE EARTHS
See also DYSPROSIUM
Stabilization
Stabilization of actinides and lanthanides in unusually high oxidation states, 11:38526 (R;US)

RDF
See REFUSE DERIVED FUELS

REACTION INTERMEDIATES
Carcinogen Screening
Biomedical implications of altered product composition in advanced coal liquefaction processes, 11:37278 (J;NL)
Raman Spectroscopy
Time-resolved resonance Raman spectroscopy of transient species formed during the oxidation of cytochrome oxidase by dioxygen, 11:38520 (BA;US)

REACTOR CELLS
Reactor Kinetics
New calculational method for the sensitivity coefficient in a cell, 11:38012 (J;US)

REACTOR COMPONENTS
See also BREEDING BLANKETS
CONTROL ELEMENTS
FUEL ELEMENTS
REACTOR COOLING SYSTEMS
REACTOR CORES
Design
Requirements for design of Class 1 elevated temperature nuclear system components (supplement to ASME Code Case N-47), 11:37937 (R;US)
Failures
Robust methods for failure rate estimation, 11:38031 (J;US)
Maintenance
Remote maintenance of TFTR components, 11:39417 (BA;US)
Remote Handling Equipment
Remote maintenance of TFTR components, 11:39417 (BA;US)
Seismic Effects
Analysis of seismic sloshing of reactor tanks considering submerged components and seismic isolation, 11:37892 (BA;US)

REACTOR CONTROL RODS
See CONTROL ELEMENTS

REACTOR CONTROL SYSTEMS
Reliability
Role of electronic reliability in reactor scram frequency reduction, 11:38004 (J;US)

REACTOR CONTROL THEORY
See REACTOR KINETICS

REACTOR COOLING SYSTEMS
See also PRIMARY COOLANT CIRCUITS
SECONDARY COOLANT CIRCUITS
Failures
Estimated safety significance of Generic Safety Issue 61, 11:38025 (R;US)
Natural Convection
Natural circulation integral reactor, 11:38044 (J;US)

REACTOR CORE DISRUPTION
Fission Product Release
Role of surface vaporization in low-volatility fission product release experiments, 11:38047 (J;US)
Time dependence of the iodine partition coefficient in an unirradiated system, 11:38051 (J;US)

REACTOR CORES
Design
Experience with single control rod pattern operation in axially two-zoned fuel cores, 11:37890 (J;US)
Operating experience with axially two-zoned initial fuel core, 11:37889 (J;US)
Hydraulics
Heterogeneity effects on the detector field of view in the radial direction in BWRs, 11:37883 (J;US)
Reactivity
San Onofre Unit 1 reactivity change due to extended shutdown, 11:37927 (J;US)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR FUELING
Planning
Evolution of an outage management organization in a small utility, 11:37908 (J;US)

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
See also IN CORE INSTRUMENTS
Level Indicators
Use of PRA in assessing BWR vessel level instrumentation, 11:38027 (J;US)

Reliability
Role of electronic reliability in reactor scram frequency reduction, 11:38004 (J;US)

REACTOR KINETICS
Adjoint Flux
Self-adjointness of the fast flux in a pressurized water reactor, 11:37921 (J;US)
Calculation Methods
Quasi-analytic point reactor kinetics calculations using individual precursor data, 11:37991 (J;US)
Computer Codes
Calculation of neutron sources and spectra in a PWR fuel, 11:37928 (J;US)
Normalization of nodal models for reactor core analysis, 11:37884 (J;US)
QPANDA: an advanced nodal method for LWR analyses, 11:37880 (J;US)
Self-adjointness of the fast flux in a pressurized water reactor, 11:37921 (J;US)
Static three-dimensional ARROTTA benchmarking, 11:37988 (J;US)
Delayed Neutron Precursors
Quasi-analytic point reactor kinetics calculations using individual precursor data, 11:37991 (J;US)
Mathematical Models
Approximate solution for the reactor neutron probability distribution, 11:37990 (J;US)
Extended bias-factor data transposition method, 11:37989 (J;US)
Stochastic modeling of an at-power pressurized water reactor, 11:37922 (J;US)
Multigroup Theory
Existence of minimum critical mass solutions for diffusion equations of reactor theory, 11:37985 (R;US)
One-Dimensional Calculations
Solution of the two-dimensional space-time reactor kinetics equation by a locally one-dimensional method, 11:37986 (J;US)
Power Distribution
Theoretical method of power overshoot evaluation for nodal reactor models, 11:37987 (J;US)
Space Dependence
Multidimensional nodal analysis of boiling water reactor stability, 11:37881 (J;US)
Solution of the two-dimensional space-time reactor kinetics equation by a locally one-dimensional method, 11:37986 (J;US)
Theoretical method of power overshoot evaluation for nodal reactor models, 11:37987 (J;US)
Three-Dimensional Calculations
Multidimensional nodal analysis of boiling water reactor stability, 11:37881 (J;US)
Static three-dimensional ARROTTA benchmarking, 11:37988 (J;US)
Time Dependence
Solution of the two-dimensional space-time reactor kinetics equation by a locally one-dimensional method, 11:37986 (J;US)

REACTOR LICENSING
Hearings
UCLA research reactor relicensing, or guilty until proven innocent, 11:38010 (J;US)

REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.
See also NUCLEAR FUELS
Aging
Predicted irradiation effects on alloy aging kinetics, 11:37894 (BA;US)
Review of effects of long-term aging on the mechanical properties and microstructures of types 304 and 316 stainless steel, 11:37946 (BA;US)
Corrosion Denting
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)
Crack Propagation
Effects of irradiation on crack propagation during creep, 11:37936 (R;US)
Creep
Effects of irradiation on crack propagation during creep, 11:37936 (R;US)
Destructive Testing
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)
Fatigue
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Fracture Properties
Review of effects of long-term aging on the mechanical properties and microstructures of types 304 and 316 stainless steel, 11:37946 (BA;US)
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Low Dose Irradiation
Predicted irradiation effects on alloy aging kinetics, 11:37894 (BA;US)
Microstructure
Review of effects of long-term aging on the mechanical properties and microstructures of types 304 and 316 stainless steel, 11:37946 (BA;US)
Nondestructive Testing
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)
Physical Radiation Effects
Effects of irradiation on crack propagation during creep, 11:37936 (R;US)
Predicted irradiation effects on alloy aging kinetics, 11:37894 (BA;US)
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Standards
Nuclear Standards master index, 11:37984 (R;US)
Tensile Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)

REACTOR MONITORING SYSTEMS
Measuring and evaluation systems for performance monitoring of reactor or its components. Not to be confused with reactor control systems.
In Core Instruments
Improved operation using the fixed margin technical specification system, 11:37979 (J;US)

REACTOR OPERATION
Specifications
Improved operation using the fixed margin technical specification system, 11:37979 (J;US)

REACTOR OPERATORS
Licensing
Nuclear power plant simulation facility evaluation methodology, 11:37958 (BA;US)
Testing
Nuclear power plant simulation facility evaluation methodology, 11:37958 (BA;US)
Training
Compact analyzer: an interactive simulator, 11:37980 (J;US)
Function of university reactors in operator licensing training for nuclear utilities, 11:38009 (J;US)
Training recommendations for ERG-based emergency operating procedures, 11:38058 (J;US)

REACTOR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text book, etc.
Multigroup Theory
Existence of minimum critical mass solutions for diffusion equations of reactor theory, 11:37985 (R;US)

REACTOR PROTECTION SYSTEMS
See also ECCS

Specifications
Reducing scrams by modifying reactor setpoints for a Westinghouse four-loop plant, 11:38054 (J;US)
Setpoint relaxation for scram reduction on C-E PWRs, 11:38055 (J;US)
REACTOR SAFETY
Forecasting
Safety prediction technique for nuclear power plants, 11:38032 (J;US)
Information Systems
Reactor Safety Assessment System. A situation assessment aid for USNRC emergency response, 11:38020 (R;US)
Program Management
Integrated nuclear safety review program at PSE & G, 11:38036 (J;US)
R Codes
Reactor Analysis Support Package (RASP). Volume 2. BWR event analysis guidelines. Final report, 11:38021 (R;US)
REACTOR SHUTDOWN

REENTRY VEHICLES
Control Systems
Optimal descending, hypersonic turn to heading, 11:38558 (R;US)
Shields
Simple defense conservative model for mass requirements of hypervelocity projectile impact shields for reentry vehicles, 11:38551 (R;US)
REFLECTIVE COATINGS
Reviews
Potential applications of artificially structured materials for x-ray microanalysis, 11:38473 (R;US)
REFRIGERANTS
Critical Heat Flux
Heat transfer and pressure drop of boiling R114 in a horizontal tube, 11:37835 (R;FI)
Pressure Drop
Heat transfer and pressure drop of boiling R114 in a horizontal tube, 11:37835 (R;FI)
REFRIGERATORS
Energy Consumption
Field performance of refrigerators, 11:38146 (R;US)
Performance
Field performance of refrigerators, 11:38146 (R;US)
REFUSE DERIVED FUELS
Evaluation
Topical report on the use of waste as fuel, 11:37713 (R;SE;In Swedish)
Production
Refuse-derived fuels in US Air Force heating and power systems. Final report, June 1982-February 1985, 11:37708 (R;US)
REFUSE-FUELED BOILERS
Operation
Refuse-derived fuels in US Air Force heating and power systems. Final report, June 1982-February 1985, 11:37708 (R;US)
REGION V
See FEDERAL REGION V
REGULATIONS
Compliance
Computer aid for compliance with the recordkeeping and reporting requirements of the PCB regulations, 11:37463 (RA;US)
REINDEER
See DEER
REINFORCED MATERIALS
Mechanical Properties
Mechanical properties of unidirectional and fabric graphite/epoxy composites, 11:38392 (R;US)
Strains
Strain contrast in SiC whisker reinforced Al_2O_3, 11:38388 (R;US)
RELATIVISTIC PLASMA
Stability
Lyapunov stability conditions for relativistic multifluid plasma, 11:39328 (J;NL)
Statistical Mechanics
Nonequilibrium truncation scheme for the statistical mechanics of relativistic matter, 11:39293 (J;US)
RELEASE (FISSION PRODUCT)
See FISSION PRODUCT RELEASE
REMEDIAL ACTION
Measuring Methods
Procedure manual for the estimation of average indoor radon-daughter concentrations using the radon grab-sampling method, 11:37651 (R;US)
REMOTE HANDLING EQUIPMENT
See also MANIPULATORS
CIT cost review for external remote maintenance equipment (WBS K), 11:39359 (R;US)
Device to upright fallen waste canisters at the WVDP. Final report, 11:37598 (R;US)
Design
Remote maintenance of TFTR components, 11:39417 (BA;US)
Robots
Robotic arm for spray painting on explosive slurry, 11:38557 (R;US)
REMOTE SENSING
Meetings
Proceedings of the EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications, 11:38737 (R;FR)
RENSSELAER CRITICAL FACILITY
Reactor Operators

International Relations
West European and East Asian perspectives on defense, deterrence, and strategy. Volume 6. South Korean perspectives on defense, deterrence, and strategy. Technical report, 1 December 1981-30 November 1982, 11:39433 (R;US)
National Security
West European and East Asian perspectives on defense, deterrence, and strategy. Volume 6. South Korean perspectives on defense, deterrence, and strategy. Technical report, 1 December 1981-30 November 1982, 11:39433 (R;US)

RESCUE OPERATIONS
Optical Radar
LIDAR techniques for search and rescue, 11:38747 (BA;US)
RESEARCH PROGRAMS
To be used jointly with descriptor(s) for subject field and/or organization concerned.
See also COORDINATED RESEARCH PROGRAMS
Hearings
1985 science and technology posture hearing with the Director of the Office of Science and Technology Policy. Hearing before the Committee on Science and Technology, 99th Congress, First Session, No. 1, 11:38108 (R;US)
Meetings
1985 science and technology posture hearing with the Director of the Office of Science and Technology Policy. Hearing before the Committee on Science and Technology, 99th Congress, First Session, No. 1, 11:38108 (R;US)
Technology Assessment
Low-rank coal program. Technology status report, 11:37260 (R;US)
RESEARCH REACTORS
See also BSR-1 REACTOR
BSR-2 REACTOR
FFTF REACTOR
NBSR REACTOR
PROTEUS REACTOR
Research Programs
Cold and ultra cold neutron beams for fundamental physics research at the Institute Laue-Langevin, 11:38007 (RA;US)
RESERVOIR ENGINEERING
Computerized Simulation
Numerical integration of systems of differential equations by BDF-methods (BDF - Backward Difference Formulation), 11:37433 (R;DK;In Danish)
Research Programs
Reservoir technology - geothermal reservoir engineering research at Stanford. Fifth annual report, October 1, 1984-September 30, 1985, 11:37815 (R;US)
RESERVOIR PRESSURE
Comparative Evaluations
Prediction techniques from logging tools: are the results confirmed by testing, 11:37398 (RA;NO)
RESERVOIR ROCK
Porosity
Porosity evolution of truncation traps: diagenetic models and log responses, 11:37397 (RA;NO)
RESERVOIR TEMPERATURE
Comparative Evaluations
Prediction techniques from logging tools: are the results confirmed by testing, 11:37398 (RA;NO)
RESIDENCES
See HOUSES
RESIDENTIAL BUILDINGS
See also APARTMENT BUILDINGS
HOUSES
MOBILE HOMES
Air Infiltration
Infiltration degree-days. A statistic for quantifying infiltration-related climate, 11:38157 (R;US)
Construction Permits
Conversion standard implementation handbook, 11:38148 (R;US)
Degree Days
Infiltration degree-days. A statistic for quantifying infiltration-related climate, 11:38157 (R;US)
Economics
Residential standards demonstration program: cost analysis, 11:38161 (R;US)
Energy Conservation
Commercial hourly end-use study at Seattle City Light, 11:38116 (RA;US)
Overview of ELCAP, 11:38115 (RA;US)
Energy Consumption
Analysis of lifestyle effects on residential energy use, 11:38145 (R;US)
Renovation of oil heating systems up to 1995, 11:38182 (R;FI;In Finnish)
Residential energy consumption in low-income and elderly households: how nondiscretionary is it?, 11:38134 (J;US)
Energy Efficiency
Overview of the software-based federal residential conservation standard, 11:38172 (R;US)
Energy Efficiency Standards
Residential standards demonstration program: cost analysis, 11:38161 (R;US)
Gas Furnaces
Efficiency improvement concepts for residential gas-fired furnaces and water heaters, 11:38186 (J;US)
Heating Systems
Renovation of oil heating systems up to 1995, 11:38182 (R;FI;In Finnish)
Indoor Air Pollution
Characterization of organic emissions from selected materials in indoor use, 11:38812 (R;US)
EPA (Environmental Protection Agency) research on indoor air quality, 11:38817 (R;US)
Indoor air pollution source data base. Report for August 1985-February 1986, 11:38819 (R;US)
Power Demand
Commercial hourly end-use study at Seattle City Light, 11:38116 (RA;US)
ELCAP instrumentation, 11:38120 (RA;US)
Instrumentation and data collection, 11:38122 (RA;US)
Overview of ELCAP, 11:38115 (RA;US)
Solar Water Heating
Improved accuracy of solar energy system testing and measurements, 11:37798 (BA;US)
Space Heating
Use of concrete hollow core slabs as a part of the heating and ventilation systems, 11:38184 (R;FI;In Finnish)
Standards
Conversion standard implementation handbook, 11:38148 (R;US)
Overview of the software-based federal residential conservation standard, 11:38172 (R;US)
Thermal Comfort
Use of concrete hollow core slabs as a part of the heating and ventilation systems, 11:38184 (R;FI;In Finnish)
Thermal Mass
Parametric analysis of thermal mass in residential buildings, 11:38160 (R;US)
Ventilation Systems
Use of concrete hollow core slabs as a part of the heating and ventilation systems, 11:38184 (R;FI;In Finnish)
Water Heaters
Efficiency improvement concepts for residential gas-fired furnaces and water heaters, 11:38186 (J;US)
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESINS
Decomposition
Low level waste data base development - EPICOR-II resin/liner investigation - a program review, 11:37543 (RA;US)
Solidification
Low level waste data base development - EPICOR-II resin/liner investigation - a program review, 11:37543 (RA;US)
RESONANCE CAVITIES
See CAVITY RESONATORS
RESONATORS
See also CAVITY RESONATORS
Computerized Simulation
Backward wave oscillators with rippled wall resonators: Analytic theory and numerical simulation, 11:38660 (BA;US)
RESORCIN
See RESORCINOL
RESORCINOL
Anaerobic Digestion
Anaerobic SBR treatment of coal conversion wastewaters. Third quarterly report, 11:37306 (R;US)
RESOURCE DEVELOPMENT
Economic Impact
Challenges to socio-economic impact modeling: lessons from the Alaska OCS Program, 11:38921 (J;US)

Legal Aspects
First call for tenders. Report from the Danish Ministry of Energy to the energy policy committee of the parliament according to subsection 2 of section 12 in the Underground Act (Exploration and exploitation of hydrocarbons), 11:37478 (R;DK;In Danish)
Social Impact
Challenges to socio-economic impact modeling: lessons from the Alaska OCS Program, 11:38921 (J;US)
RESOURCE MANAGEMENT
Meetings
Uncertainties and innovation - management of northern offshore resources. Pt. 3, 11:37465 (R;NO)
RESPIRABLE DUSTS
See DUSTS
RESPIRATORY SYSTEM
See also LUNGS
Chemical Composition
Lithium combustion aerosol reactions in air containing carbon dioxide and water vapor, 11:38800 (RA;US)
RESTAURANTS
Energy Consumption
Project on restaurant energy performance end-use monitoring and analysis, 11:38173 (R;US)
Energy Efficiency
Project on restaurant energy performance end-use monitoring and analysis, 11:38173 (R;US)
RESUSPENSION
See PARTICLE RESUSPENSION
RETROFITTING
Attitudes
Energy efficiency in buildings: behavioral issues. Final report, 11:38167 (R;US)
Optimization
Backfit management: the optimal use of resources, 11:37969 (J;US)
REVERSE OSMOSIS
See OSMOSIS
REVERSE-FIELD PINCH
Design
Design of an air-core reversed field pinch, 11:39377 (J;US)
Research Programs
University of Wisconsin reversed field pinch boundary study. Quarterly progress report, March 13-June 13, 1986, 11:39361 (R;US)
RHO-765 RESONANCES
Coherent Production
Measurement of the resonance parameters and radiative width of the rho^{+}, 11:39153 (J;US)
Mass
Measurement of the resonance parameters and radiative width of the rho^{+}, 11:39153 (J;US)
Particle Widths
Measurement of the resonance parameters and radiative width of the rho^{+}, 11:39153 (J;US)
Radiative Decay
Measurement of the resonance parameters and radiative width of the rho^{+}, 11:39153 (J;US)
RHODESIA (NORTHERN)
See ZAMBIA
RHODIUM
Oxidation
Direct observations of surface chemical and structural changes resulting from the CO oxidation reaction on rhodium, 11:38323 (J;US)
RHODOSPIRILLUM
Electron Spin Resonance
Analysis of electron spin echo modulation in randomly oriented solids: ^{15}N modulation of radical cations of bacteriochlorophyll a and the primary donor of photosynthetic bacterium Rhodospirillum, 11:38517 (J;US)
RHYOLITES
Physical Properties
Variation in properties of nuclear test areas and media at the Nevada Test Site, 11:39008 (R;US)
RICHLAND FFTF REACTOR
See FFTF REACTOR
RIEMANN WAVES
See SHOCK WAVES
RIFT ZONES
Heat Flow
Drilling investigations of crustal rifting processes in the Salton Trough, California, 11:37812 (R;US)
Seismicity
New Madrid Seismotectonic Program. Final report, 11:38991 (R;US)
Tectonics
New Madrid Seismotectonic Program. Final report, 11:38991 (R;US)
RINGS (STORAGE)
See STORAGE RINGS
RISER CRACKING
See COAL LIQUEFACTION
RISK ANALYSIS
See RISK ASSESSMENT
RISK ASSESSMENT
Health effects of diesel exhaust: a case study in risk assessment, 11:38965 (J;US)
LAVA: a conceptual framework for automated risk assessment, 11:37678 (R;US)
Planning
Preventive measures for reduction of airborne PCB contamination risk, 11:38873 (RA;US)
Probabilistic Estimation
Use of PRA in assessing BWR vessel level instrumentation, 11:38027 (J;US)
Probability
PRA-based plant system reviews, 11:38029 (J;US)
Verification
FSAR verification program, 11:38038 (J;US)
RIVERS
See also SAVANNAH RIVER
Water Pollution Control
Formation of particulate suspended matter and its influence on bounding and distribution of ecotoxic heavy metals in the tidal influenced Elbe river, 11:38896 (R;DE;In German)
Water Quality
Water quality and regional development. Contributions to the Swedish water conservation history of the last century with examples from the Motala River Basin, 11:38097 (R;SE;In Swedish)
RIVETS
See FASTENERS
ROADS
Building Materials
Fly ash in cementbound sand for roadbase. Accelerated testing in road testing machine, 11:38197 (R;DK)
ROBOTS
Development of a self-navigating mobile interior robot application as a security guard/sentry, 11:37682 (R;US)
Computerized Control Systems
Advances in concurrent computers for autonomous robots, 11:38546 (R;US)
ROCK MECHANICS
Calculation Methods
The kinematics of block interpenetrations, 11:39009 (BA;US)
Computerized Simulation
Measurement and calculation of the mechanical response of a highly fractured rock, 11:39011 (BA;US)
Mathematical Models
Measurement and calculation of the mechanical response of a highly fractured rock, 11:39011 (BA;US)
Measurement of elastic properties and static strength. Final report, 1 July 1983-1 October 1984, 11:38784 (R;US)
ROCK SALT
See SALT DEPOSITS
ROCKS
Heat Storage
Rock caverns used for oil storage, as heat stores. A case study in Karlshamn, 11:38071 (R;SE;In Swedish)
Mechanical Properties
The kinematics of block interpenetrations, 11:39009 (BA;US)

Seismic Surveys
Effects of contact area of an interface on acoustic wave transmission characteristics, 11:38996 (BA;US)
Sonic Logging
Detection and evaluation of structural rock damage in the overburden at an underground base. Acoustic transmission method, 11:38987 (R;US)
Stress Analysis
Calculation of laboratory stress-strain behavior using a compliant joint model, 11:39010 (BA;US)
Stresses
Effects of contact area of an interface on acoustic wave transmission characteristics, 11:38996 (BA;US)

ROCKWELL INTERNATIONAL PROCESS
See MOLTEN SALT COAL GASIFICATION PROCESS

ROCKY FLATS PLANT
Radioactive Waste Processing
Radioactive waste management at Rocky Flats, 11:37623 (R;US)

ROD BUNDLES
Natural Convection
Buoyancy induced convection in a non-uniformly heated array of cubical elements on a vertical channel wall, 11:38626 (R;US)

ROD DROP ACCIDENTS
Computerized Simulation
Improved point-kinetics model for the BWR control rod drop accident, 11:38060 (J;US)

RODS
Mechanical Vibrations
Buffeting of a slender circular beam in axial turbulent flows, 11:38569 (J;US)

RODS (CONTROL)
See CONTROL ELEMENTS

RODS (FUEL)
See FUEL RODS

ROOFS
Heat Gain
Changes in building heating and cooling requirements due to a reduction in the roof's solar absorptance, 11:38144 (R;US)

ROTATING PLASMA
Ballooning Instability
Ballooning spectrum of rotating plasmas, 11:39353 (J;US)

ROTATIONAL BAND
See ROTATIONAL STATES

ROTATIONAL STATES
Nuclear Models
Macroscopic model of rotating nuclei, 11:39267 (J;US)

ROTORS
Design
Machine imparting complex rotary motion for lapping a spherical inner diameter, 11:38142 (P;US)
Operation
Machine imparting complex rotary motion for lapping a spherical inner diameter, 11:38142 (P;US)
Power Generation
Machine imparting complex rotary motion for lapping a spherical inner diameter, 11:38142 (P;US)

RUBIDIUM
Absorption Spectra
Spectral characterization of a tunable alexandrite laser by rubidium absorption at 780 nm, 11:38603 (BA;US)
Atom-Atom Collisions
Spin exchange optical pumping to produce large amounts of polarized nuclei, 11:39100 (J;US)
Hyperfine Structure
Spectral characterization of a tunable alexandrite laser by rubidium absorption at 780 nm, 11:38603 (BA;US)
Optical Pumping
Spin exchange optical pumping to produce large amounts of polarized nuclei, 11:39100 (J;US)

RUBIDIUM IODIDES
Crystal Growth
Neutron scattering study of the nucleation and growth process at the pressure-induced first-order phase transformation of RbI, 11:38431 (J;US)
Crystal-Phase Transformations
Neutron scattering study of the nucleation and growth process at the pressure-induced first-order phase transformation of RbI, 11:38431 (J;US)
Neutron Diffraction
Neutron scattering study of the nucleation and growth process at the pressure-induced first-order phase transformation of RbI, 11:38431 (J;US)
Nucleation
Neutron scattering study of the nucleation and growth process at the pressure-induced first-order phase transformation of RbI, 11:38431 (J;US)

RUNOFF
Nutrients
Nutrient transport in runoff water from Finnish peatland drainage and peat mining areas, 11:37320 (RA;SE)

RURAL AREAS
Electric Power
Rural electrification in Bangladesh: management, engineering, and financial assessment, 11:37828 (R;US)

RUSSELLVILLE-1 ARKANSAS REACTOR
See ARKANSAS-1 REACTOR

RUTHENIUM
Surface Properties
Electron spectroscopy in fundamental catalytic studies, 11:38295 (R;US)

RUTHENIUM COMPLEXES
Electron Transfer
Ab initio models for electron tunnelling between transition metal complexes. Final report, 11:38490 (R;US)

RUTHENIUM SILICIDES
Magnetic Properties
Evidence of a magnetic gaplike excitation in URu_2Si_2, 11:38434 (J;US)
Neutron Diffraction
Evidence of a magnetic gaplike excitation in URu_2Si_2, 11:38434 (J;US)

S

S CODES
Computer calculations to develop quality assurance (QA) methodology for nuclear waste repository design calculations: isothermal parallel calculation. Topical report RSI-0283, 11:37626 (R;US)

SAFEGUARDS
Measuring Methods
DOE research and development report. Progress report, October 1984-September 1985, 11:37679 (R;US)
Quality Assurance
Comparing corrective actions with anomaly resolution, 11:37680 (R;US)

SAFETY (NUCLEAR)
See RADIATION PROTECTION

SAFETY (REACTOR)
See REACTOR SAFETY

SALEM NUCLEAR GENERATING STATION UNIT-1
See SALEM-1 REACTOR

SALEM NUCLEAR GENERATING STATION UNIT-2
See SALEM-2 REACTOR

SALEM-1 REACTOR
Salem, New Jersey, USA
Circuit Breakers
Improved reactor trip breaker reliability for pressurized water reactors, 11:37915 (J;US)
Reactor Safety
Integrated nuclear safety review program at PSE & G, 11:38036 (J;US)
Scram
Improved reactor trip breaker reliability for pressurized water reactors, 11:37915 (J;US)

SALEM-2 REACTOR
Salem, New Jersey, USA

Reactor Safety
Integrated nuclear safety review program at PSE & G, 11:38036 (J;US)
SALINE ZONE
See OIL SHALES
SALMON
Anatomy
Stock identification of Columbia River chinook salmon and steelhead trout. Annual progress report, 11:37719 (R;US)
Electrophoresis
Stock identification of Columbia River chinook salmon and steelhead trout. Annual progress report, 11:37719 (R;US)
Fisheries
Fisheries enhancement in the Fish Creek Basin: an evaluation of in-channel and off-channel projects, 1984. Annual report 1984, 11:38944 (R;US)
Pen rearing and imprinting of fall chinook salmon. Final report, 11:38943 (R;US)
SALT CAVERNS
Leaching
Strategic Petroleum Reserve (SPR) creep-closure test on Sulphur Mines cavern 6, 11:37483 (R;US)
Pressure Measurement
Strategic Petroleum Reserve (SPR) creep-closure test on Sulphur Mines cavern 6, 11:37483 (R;US)
SALT DEPOSITS
Boreholes
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 1 (Avery Island diapiric salt), 11:38998 (R;US)
Two-dimensional axisymmetric and plane strain scoping calculations for the Small-Scale Seal Performance Test, Test Series A, 11:37628 (R;US)
Brines
Preliminary results of brine migration studies in the Waste Isolation Pilot Plant (WIPP), 11:37629 (R;US)
Bulk Density
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)
Cavities
Salt dissolution and collapse at the Wink Sink in West Texas, 11:39002 (R;US)
Compression Strength
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)
Creep
Strategic Petroleum Reserve (SPR) creep-closure test on Sulphur Mines cavern 6, 11:37483 (R;US)
Dissolution
Salt dissolution and collapse at the Wink Sink in West Texas, 11:39002 (R;US)
Hydraulic Fracturing
Stress measurements in rock salt using hydraulic fracturing, 11:39007 (R;US)
Inclusions
Micro-Raman spectroscopy of fluid inclusions in a hopper crystal in halite, 11:39012 (R;US)
Permeability
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)
Porosity
Full-scale borehole sealing test in salt under simulated downhole conditions. Volume 2, 11:38999 (R;US)
Radioactive Waste Disposal
Methodology for performing parallel design calculations (nuclear waste repository application), 11:37624 (R;US)
Strains
Two-dimensional axisymmetric and plane strain scoping calculations for the Small-Scale Seal Performance Test, Test Series A, 11:37628 (R;US)
Stresses
Stress measurements in rock salt using hydraulic fracturing, 11:39007 (R;US)
Two-dimensional axisymmetric and plane strain scoping calculations for the Small-Scale Seal Performance Test, Test Series A, 11:37628 (R;US)
Sulfates
Micro-Raman spectroscopy of fluid inclusions in a hopper crystal in halite, 11:39012 (R;US)
SALTON SEA GEOTHERMAL FIELD
Well Drilling
Drilling investigations of crustal rifting processes in the Salton Trough, California, 11:37812 (R;US)
SAMARIUM 144
Energy Levels
Inelastic proton excitation of high-lying giant resonances, 11:39239 (J;US)
Giant Resonance
Inelastic proton excitation of high-lying giant resonances, 11:39239 (J;US)
SAMARIUM 144 TARGET
Proton Reactions
Inelastic proton excitation of high-lying giant resonances, 11:39239 (J;US)
SAMPLE PREPARATION
Grinding Machines
Grinding/polishing tool to aid thin section preparation of small samples, 11:38341 (J;US)
SAMPLERS
Comparative Evaluations
Comparison of PCB analytical methods, 11:38862 (RA;US)
Performance Testing
Detecting chloroorganics in groundwater, 11:38905 (J;US)
Evaluation of a portable test kit for testing PCB contaminated soils and oils in the field, 11:37847 (RA;US)
Field testing of the S-Cubed gas chromatograph, PCBA-102, 11:37849 (RA;US)
SAMPLING
Cost
Sampling for analysis of biofuels, 11:37715 (R;SE;In Swedish)
SAN ONOFRE-1 REACTOR
San Clemente, California, USA
Information Systems
Prototype for an automated technical specification information system, 11:37917 (J;US)
Quality Assurance
Bechtel's QA contribution to maintaining the reliability of San Onofre, 11:37904 (J;US)
Reactor Cores
San Onofre Unit 1 reactivity change due to extended shutdown, 11:37927 (J;US)
Reactor Shutdown
San Onofre Unit 1 reactivity change due to extended shutdown, 11:37927 (J;US)
Specifications
Prototype for an automated technical specification information system, 11:37917 (J;US)
SAN ONOFRE-2 REACTOR
San Clemente, California, USA
Circuit Breakers
Improved reactor trip breaker reliability for pressurized water reactors, 11:37915 (J;US)
Information Systems
Prototype for an automated technical specification information system, 11:37917 (J;US)
On-Site Power Generation
Simplified method to identify causes of PWR electrical output losses, 11:37919 (J;US)
Quality Assurance
Bechtel's QA contribution to maintaining the reliability of San Onofre, 11:37904 (J;US)
Reactor Protection Systems
Elimination of reactor trips caused by single CEA drops through improvements in the reactor protection system, 11:37913 (J;US)
Scram
Improved reactor trip breaker reliability for pressurized water reactors, 11:37915 (J;US)
Specifications
Prototype for an automated technical specification information system, 11:37917 (J;US)

SAN ONOFRE-3 REACTOR
San Clemente, California, USA
Circuit Breakers
Improved reactor trip breaker reliability for pressurized water reactors, 11:37915 (J;US)
Information Systems
Prototype for an automated technical specification information system, 11:37917 (J;US)
On-Site Power Generation
Simplified method to identify causes of PWR electrical output losses, 11:37919 (J;US)
Quality Assurance
Bechtel's QA contribution to maintaining the reliability of San Onofre, 11:37904 (J;US)
Reactor Protection Systems
Elimination of reactor trips caused by single CEA drops through improvements in the reactor protection system, 11:37913 (J;US)
Scram
Improved reactor trip breaker reliability for pressurized water reactors, 11:37915 (J;US)
Specifications
Prototype for an automated technical specification information system, 11:37917 (J;US)
SAND
Electrophoresis
Further investigation of the surface charge properties of oxide surfaces in oil bearing sands and sandstones, 11:37426 (RA;US)
Leaching
Further investigation of the surface charge properties of oxide surfaces in oil bearing sands and sandstones, 11:37426 (RA;US)
Permeability
Improved recovery from thin oil sands. 2. Pt. Troll field, 11:37415 (RA;NO)
Potentiometry
Further investigation of the surface charge properties of oxide surfaces in oil bearing sands and sandstones, 11:37426 (RA;US)
SAND PRESSURE
See RESERVOIR PRESSURE
SANDSTONES
Electrophoresis
Further investigation of the surface charge properties of oxide surfaces in oil bearing sands and sandstones (Baked and unbaked Berea sandstone), 11:37426 (RA;US)
Leaching
Further investigation of the surface charge properties of oxide surfaces in oil bearing sands and sandstones (Baked and unbaked Berea sandstone), 11:37426 (RA;US)
Permeability
Hydrocarbon displacement by carbon dioxide dispersions, 11:37429 (R;US)
Interaction of Pseudomonas putida ATCC 12633 and bacteriophage gh-1 in Berea sandstone rock, 11:37427 (RA;US)
Porosity
Hydrocarbon displacement by carbon dioxide dispersions, 11:37429 (R;US)
Potentiometry
Further investigation of the surface charge properties of oxide surfaces in oil bearing sands and sandstones (Baked and unbaked Berea sandstone), 11:37426 (RA;US)
SANITARY LANDFILLS
Gaseous Wastes
Measurement of fugitive atmospheric emissions of polychlorinated biphenyls from hazardous waste landfills, 11:38836 (J;US)
SAPPHIRE
Absorptivity
Nuclear-radiation-induced absorption in optical materials, 11:38457 (BA;US)
Physical Radiation Effects
Nuclear-radiation-induced absorption in optical materials, 11:38457 (BA;US)
SAVANNAH RIVER
Ichthyoplankton
Savannah River Aquatic Ecology Program. Volume I. Annual report, September 1982-August 1983, 11:38915 (R;US)
SAVANNAH RIVER PLANT
Hazardous Materials
Savannah River Plant hazardous waste characterization, 11:37604 (R;US)
Radioactive Waste Management
Reverse osmosis treatment of 200-area effluents, 11:37639 (R;US)
Research Programs
Savannah River Aquatic Ecology Program. Volume I. Annual report, September 1982-August 1983, 11:38915 (R;US)
SCANDIUM 48
Beta-Minus Decay
Half-life limit for $^{48}Ca(2\beta^-)^{48}Ti(0_2^+,2997)$, 11:39226 (J;US)
SCANDIUM 51
Energy Levels
Nuclear data sheets for A = 51, 11:39230 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 51, 11:39230 (J;US)
SCANDIUM COMPOUNDS
See also SCANDIUM PHOSPHATES
Defects
Fracture of solid state laser slabs, 11:38585 (J;US)
Fractures
Fracture of solid state laser slabs, 11:38585 (J;US)
Stresses
Fracture of solid state laser slabs, 11:38585 (J;US)
SCANDIUM PHOSPHATES
Electron Spin Resonance
EPR observations of trivalent titanium in orthophosphate single crystals, 11:38495 (J;US)
Titanium Additions
EPR observations of trivalent titanium in orthophosphate single crystals, 11:38495 (J;US)
SCANNING ELECTRON MICROSCOPY
Image Processing
Application of automated image analysis to the study of mineral matter in raw and processed coals, 11:37292 (R;US)
SCHOOL BUILDINGS
Energy Conservation
Alternative financing of energy conservation. Final technical report, September 14, 1984-March 31, 1986, 11:38150 (R;US)
SCHOTTKY BARRIER DIODES
Fabrication
Metal-derived band gap states: Ti on GaAs(110), 11:38442 (J;US)
SCOTLAND
See UNITED KINGDOM
SCRAM
Evaluation
Westinghouse domestic PWR automatic trip evaluation, 11:38056 (J;US)
Frequency Analysis
B & W owners group scram reduction efforts, 11:37914 (J;US)
Reducing the frequency of scrams in US nuclear power plants, 11:37875 (J;US)
Viable scram reduction program: its cost and benefits, 11:37874 (J;US)
Westinghouse domestic PWR automatic trip evaluation, 11:38056 (J;US)
SCRAP METALS
Contamination
Contaminated scrap metal management at the ORGDP - a problem solved, 11:37563 (RA;US)
SCREWS
See FASTENERS
SCRUBBERS
Design
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 1. Categorical summaries of FGD systems, 11:37840 (R;US)

Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 1 of 2. Design performance data for operating FGD systems, 11:37852 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 2 of 2. Design performance data for operating FGD systems, 11:37853 (R;US)
Operation
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 1. Categorical summaries of FGD systems, 11:37840 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 1 of 2. Design performance data for operating FGD systems, 11:37852 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 2 of 2. Design performance data for operating FGD systems, 11:37853 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Project summary, 11:37839 (R;US)
Performance
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 1. Categorical summaries of FGD systems, 11:37840 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 1 of 2. Design performance data for operating FGD systems, 11:37852 (R;US)
Utility FGD [flue gas desulfurization] survey, October-December 1984. Volume 2. Part 2 of 2. Design performance data for operating FGD systems, 11:37853 (R;US)

SEA BED
Radioactive Waste Disposal
1985 Subseabed Disposal Project annual report: systems, October 1984-September 1985, 11:37627 (R;US)
Research Programs
1985 Subseabed Disposal Project annual report: systems, October 1984-September 1985, 11:37627 (R;US)
Sedimentation
Acoustic structure and echo character of surficial sediments of the northern Hatteras Abyssal Plain (LLW Ocean Disposal Program), 11:39014 (R;US)
Late Quarternary evolution of the northern Hatteras Abyssal Plain, 11:39015 (R;US)
Sediments
Data report on sediment cores collected on cruise W8209-B, Pacific study area W-N, 11:39013 (R;US)
Seismic Surveys
Acoustic structure and echo character of surficial sediments of the northern Hatteras Abyssal Plain (LLW Ocean Disposal Program), 11:39014 (R;US)

SEACOAST
See SHORES

SEALING MATERIALS
Materials Testing
Salt repository sealing materials development program: 5-year work plan, 11:37528 (R;US)
Performance Testing
Development and implementation: Test Series A of the Small-Scale Seal Performance Tests, 11:38410 (R;US)
Specifications
Salt repository sealing materials development program: 5-year work plan, 11:37528 (R;US)

SEALS
Failures
Safety impact of mechanical- and maintenance-induced seal failures of reactor coolant pumps, 11:38026 (J;US)
Materials Testing
Long-term evaluation of fluoroelastomer O-rings in UF_6, 11:37510 (J;US)
Service Life
Long-term evaluation of fluoroelastomer O-rings in UF_6, 11:37510 (J;US)

SEAWATER
Natural Radioactivity
Radiochemical studies in support of the low level waste ocean disposal program (East Coast Site), 11:37625 (R;US)

SECONDARY BATTERIES
See ELECTRIC BATTERIES

SECONDARY COOLANT CIRCUITS
Steam Generators
Model of sludge behavior in nuclear plant steam generators. Final report, 11:37903 (R;US)

SECONDARY RECOVERY
See ENHANCED RECOVERY

SECOND-HARMONIC GENERATION
See HARMONIC GENERATION

SECURITY
See also NATIONAL SECURITY
Artificial Intelligence
Future role of AI/Robotics in physical security, 11:37685 (R;US)
Robots
Development of a self-navigating mobile interior robot application as a security guard/sentry, 11:37682 (R;US)
Future role of AI/Robotics in physical security, 11:37685 (R;US)

SEDIMENTS
Diagenesis
Late Quarternary evolution of the northern Hatteras Abyssal Plain, 11:39015 (R;US)
Drill Cores
Data report on sediment cores collected on cruise W8209-B, Pacific study area W-N, 11:39013 (R;US)
Environmental Transport
Sediment and contaminant transport in a marine environment, 11:38908 (R;US)
Radionuclide Migration
Sediment and contaminant transport in a marine environment, 11:38908 (R;US)
Stratigraphy
Acoustic structure and echo character of surficial sediments of the northern Hatteras Abyssal Plain (LLW Ocean Disposal Program), 11:39014 (R;US)
Toxic Materials
Bioaccumulation of toxins from dredged materials from the port of Hampton Roads, Virginia. Final report for period ending November 1984, 11:38890 (R;US)

SEISMIC SOURCES
Bench-Scale Experiments
Gas-gun experiments determine forces on penetrators into geological targets, 11:37404 (BA;US)

SEISMIC SURVEYS
Data Processing
Current state of development of the marine 3D seismic survey method, 11:37396 (RA;NO)
Seismic Sources
Gas-gun experiments determine forces on penetrators into geological targets, 11:37404 (BA;US)

SEISMIC WAVES
Phase Velocity
Effects of contact area of an interface on acoustic wave transmission characteristics, 11:38996 (BA;US)
Wave Propagation
Effects of contact area of an interface on acoustic wave transmission characteristics, 11:38996 (BA;US)
Measurement of elastic properties and static strength. Final report, 1 July 1983-1 October 1984, 11:38784 (R;US)

SEISMOGRAPHS
Remote Control
Test of SEISPACE seismological DCPs in Ubaye (French Alps), 11:38986 (R;FR)

SELENIUM
Liquid Column Chromatography
Evaluation of a direct injection nebulizer interface for flow injection analysis and high performance liquid chromatography with inductively coupled plasma-atomic emission spectroscopic detection, 11:38470 (R;US)

SELENIUM FLUORIDES
Photolysis
IR photosysis of SeF_6: isotope separation and dissociation enhancement using NH_3 and CO_2 lasers, 11:37690 (J;US)

SELENIUM IONS
Energy Levels
Spectrum of sodium-like selenium: Se XXIV, 11:39090 (J;US)

Ionization Potential
Spectrum of sodium-like selenium: Se XXIV, 11:39090 (J;US)
Ultraviolet Spectra
Spectrum of sodium-like selenium: Se XXIV, 11:39090 (J;US)
SELF-SERVE STATIONS
See GASOLINE SERVICE STATIONS
SEM (MICROSCOPY)

SEMICONDUCTOR LASERS
SEMICONDUCTOR RESISTORS
SEMICONDUCTOR SWITCHES
TRANSISTORS
Fabrication
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
Interfaces
Generation of field-sensitive interface states in commercial CMOS devices. Technical report, 1 September 1983-15 May 1984, 11:38733 (R;US)
Performance Testing
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
Radiation Hardening
Generation of field-sensitive interface states in commercial CMOS devices. Technical report, 1 September 1983-15 May 1984, 11:38733 (R;US)
SEMICONDUCTOR DIODES
See also PHOTODIODES
SCHOTTKY BARRIER DIODES
Fabrication
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
Performance Testing
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
SEMICONDUCTOR LASERS
Configuration
Calculation of cavity supermodes for diode laser arrays, 11:38595 (BA;US)
Fabrication
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
Gain
Calculation of cavity supermodes for diode laser arrays, 11:38595 (BA;US)
Operation
Diode-laser-pumped Nd:YAG laser injection seeding system, 11:38605 (BA;US)
Performance
Pressure dependence of Al/sub x/Ga/sub 1 - x/As light emitting diodes near the direct-indirect transition, 11:38592 (J;US)
Performance Testing
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
Polarization
Sensitive detection of tunable diode laser absorption by polarization rotation, 11:38455 (BA;US)
Pressure Measurement
Pressure dependence of Al/sub x/Ga/sub 1 - x/As light emitting diodes near the direct-indirect transition, 11:38592 (J;US)
SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Electrical Properties
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
Energy-Loss Spectroscopy
Analysis of semiconductor EELS in the low-loss regime, 11:38407 (R;US)
Etching
Laser-induced photochemical dry etching of III-V compound semiconductors, 11:38452 (BA;US)
Milling
Comparison of ion-milling techniques for cross-sectional TEM of semiconductors, 11:38459 (J;US)
Optical Properties
Strained-Layer-Superlattice optoelectronic devices, 11:38598 (BA;US)
Photochemistry
Laser-induced photochemical dry etching of III-V compound semiconductors, 11:38452 (BA;US)
Physical Radiation Effects
Laser-induced photochemical dry etching of III-V compound semiconductors, 11:38452 (BA;US)
SEMICONDUCTOR RESISTORS
Fabrication
Fabrication of high-field zinc oxide varistors by sol-gel processing, 11:38380 (J;US)
Materials
Compositional heterogeneity in ZnO-BaO-CoO varistors, 11:38378 (J;NL)
SEMICONDUCTOR SWITCHES
Photoconductors
Engineering limits of photoconductive semiconductor switches in pulsed power applications, 11:38647 (R;US)
SENIOR CENTERS
See PUBLIC BUILDINGS
SEPARATION EQUIPMENT
Design
Production of chemicals from food processing wastes using a novel fermenter separator. Technical progress report, January 1-March 31, 1986, 11:37705 (R;US)
Performance Testing
Production of chemicals from food processing wastes using a novel fermenter separator. Technical progress report, January 1-March 31, 1986, 11:37705 (R;US)
SERI
See SOLAR ENERGY RESEARCH INSTITUTE
SERVICE STATIONS
See GASOLINE SERVICE STATIONS
SEWAGE SLUDGE
Combustion
Indianapolis technical innovation program: program results. Final Report, 11:38083 (B;US)
Composting
Some applications of the use of peat in environmental problems, 11:37290 (RA;SE)
SEYFERT GALAXIES
Emission Spectra
Hydrogen line ratios in Seyfert galaxies and low redshift quasars. Final Technical Report, 1 June 1983-31 July 1984, 11:39022 (R;US)
Red Shift
Hydrogen line ratios in Seyfert galaxies and low redshift quasars. Final Technical Report, 1 June 1983-31 July 1984, 11:39022 (R;US)
SHALE GAS
Resource Assessment
Technically recoverable Devonian Shale gas in Ohio, West Virginia, and Kentucky, 11:37469 (BA;US)
SHALE MINING
See OIL SHALE MINING
SHALE OIL
Multi-Element Analysis
Evaluation of a direct injection nebulizer interface for flow injection analysis and high performance liquid chromatography with inductively coupled plasma-atomic emission spectroscopic detection, 11:38470 (R;US)

Thermodynamic Properties
Thermodynamic characterization of conversion-process oils as materials of continuous distribution. Final report, January 1983-December 1985, 11:37505 (R;US)

SHALE TAR WATER
Multi-Element Analysis
Evaluation of a direct injection nebulizer interface for flow injection analysis and high performance liquid chromatography with inductively coupled plasma-atomic emission spectroscopic detection, 11:38470 (R;US)

SHATTERING
See FRAGMENTATION

SHF RADIATION
See RADIOWAVE RADIATION

SHIELDS
Design
The performance of the poloidal divertor experiment neutral beam wall armor, 11:39384 (J;US)
Performance Testing
The performance of the poloidal divertor experiment neutral beam wall armor, 11:39384 (J;US)

SHIMANE-1 REACTOR
Kashima, Shimane, Japan
Primary Coolant Circuits
Chemical composition of crud deposits on BWR fuel surfaces, 11:37879 (J;US)

SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR

SHIPPINGPORT REACTOR
Asbestos
Asbestos removal at the Shippingport Station Decommissioning Project, 11:37901 (R;US)
Control Systems
Shippingport Station Decommissioning Project (SSDP): configuration control system and project activity controls, 11:37900 (R;US)
Reactor Decommissioning
Asbestos removal at the Shippingport Station Decommissioning Project, 11:37901 (R;US)
Release criteria for decommissioning of the Shippingport Atomic Power Station, 11:37899 (R;US)
Shippingport Station Decommissioning Project (SSDP): configuration control system and project activity controls, 11:37900 (R;US)
Shippingport Station Decommissioning Project, 11:37902 (R;US)
Shippingport station decommissioning project technology transfer program, 11:37898 (R;US)
Shippingport station decommissioning project overview, 11:37896 (R;US)
Shippingport station decommissioning project start of physical decommissioning, 11:37897 (R;US)

SHOCK WAVES
Detection
Novel optical pin using microballons, 11:38570 (J;US)
Refraction
Operation Hardtack. Project 1.5. Refraction of shock from a deep-water burst. Report for April-October 1958, 11:38769 (R;US)

SHORES
For both lake- and sea-land boundaries.
Biodegradation
Treatment of oil containing waste. Experiences with composting and disposal, 11:37472 (R;NO;In Norwegian)
Oil Spills
Treatment of oil containing waste. Experiences with composting and disposal, 11:37472 (R;NO;In Norwegian)

SHOTFIRING
See EXPLOSIVE FRACTURING

SHREDDERS
Design
Shredder, mainly for industrial waste. Final report, 11:38661 (R;SE;In Swedish)

SHUTDOWN (REACTOR)
See REACTOR SHUTDOWN

SHUTIN PRESSURE
See RESERVOIR PRESSURE

SIALON
See ALUMINIUM OXIDES

SIGMA MODEL
Superstrings and geometry of superspace, 11:39196 (R;US)

SILANES
Depolymerization
Method of using polysilane positive photoresist materials, 11:38436 (P;US)
Photoconductivity
Method of using polysilane positive photoresist materials, 11:38436 (P;US)
Photolysis
Method of using polysilane positive photoresist materials, 11:38436 (P;US)

SILICA
Absorptivity
Nuclear-radiation-induced absorption in optical materials, 11:38457 (BA;US)
Chemical Bonds
Variable angle x-ray photoelectron spectroscopy and ion scattering spectroscopy study of the Ag/SiO_2 interface, 11:38319 (J;US)
Interfaces
Atomic structure of $Si-SiO_2$ interfaces suggesting a ledge mechanism of silicon oxidation, 11:38461 (J;US)
Variable angle x-ray photoelectron spectroscopy and ion scattering spectroscopy study of the Ag/SiO_2 interface, 11:38319 (J;US)
Physical Radiation Effects
Nuclear-radiation-induced absorption in optical materials, 11:38457 (BA;US)

SILICA GEL
Physical Properties
Transparent superinsulating materials: new aspects in solar technology, 11:37790 (RA;FR)

SILICATES
See also ALUMINIUM SILICATES
GARNETS
Adsorption
Effect of silicate and aluminate ion adsorption on the reaction of quartz and alumina with caustic solution, 11:37431 (R;US)

SILICEOUS ROCK
See SANDSTONES

SILICON
Atom Transport
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
Auger Electron Spectroscopy
Auger analysis of Si—H bonding and hydrogen concentration in hydrogenated amorphous silicon, 11:38446 (J;US)
Chemical Bonds
Auger analysis of Si—H bonding and hydrogen concentration in hydrogenated amorphous silicon, 11:38446 (J;US)
Chemical Vapor Deposition
Submicron silicon powder production in an aerosol reactor, 11:38419 (J;US)
Coatings
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
Crystal Growth
Some aspects of long-range, high-risk photovoltaic research at SERI, 11:37757 (BA;US)
Crystal-Phase Transformations
Atomic structure of $Si-SiO_2$ interfaces suggesting a ledge mechanism of silicon oxidation, 11:38461 (J;US)
Czochralski Method
Current status of silicon materials research for photovoltaic applications, 11:37759 (BA;US)
Dendritic Web Growth Method
Current status of silicon materials research for photovoltaic applications, 11:37759 (BA;US)

Deposition
Direct-laser writing of silicon microstructures: Raman microprobe diagnostics and modeling of the nucleation phase of deposition, 11:38438 (J;US)
Low temperature (150-250°C) deposition of n^+ and p^+ microcrystalline silicon for VLSI device contacts, 11:38465 (J;US)
Electrical Properties
Stress and efficiency studies in EFG. Quarterly progress report, October 1-December 31, 1985, 11:37734 (R;US)
Electron Channeling
Channeling radiation: atomic and molecular physics in one and two dimensions, 11:38469 (J;US)
Energy-Level Density
Density of states at mid gap in hydrogenated amorphous silicon, 11:38403 (R;US)
Grain Boundaries
Chemistry of hydrogen and arsenic interactions at silicon grain boundaries, 11:38441 (J;US)
Impurities
Auger analysis of Si—H bonding and hydrogen concentration in hydrogenated amorphous silicon, 11:38446 (J;US)
Central-cell and screening effects on the binding energies of neutral chalcogen impurities in silicon, 11:38427 (J;US)
Interfaces
Atomic structure of Si-SiO_2 interfaces suggesting a ledge mechanism of silicon oxidation, 11:38461 (J;US)
Laser-Radiation Heating
Kinetic and thermodynamic studies of pulsed laser irradiation, 11:38411 (R;US)
Melting
Kinetic and thermodynamic studies of pulsed laser irradiation, 11:38411 (R;US)
Surface solidification and impurity segregation in amorphous silicon, 11:38423 (J;US)
Neutron Reactions
Measurement of nonelastic cross section for the elements Cu, Si at 14.9 MeV, 11:39273 (R;XA)
Oxidation
Atomic structure of Si-SiO_2 interfaces suggesting a ledge mechanism of silicon oxidation, 11:38461 (J;US)
Physical Radiation Effects
Investigation of the basic mechanisms of radiation effects on electronic materials and devices and development of hardening techniques. Volume 1. Technical report, 1 January 1982-1 January 1983, 11:38734 (R;US)
Powder Metallurgy
Submicron silicon powder production in an aerosol reactor, 11:38419 (J;US)
Recrystallization
Zone-melting recrystallization of thick silicon on insulator films, 11:38462 (J;NL)
Reflectivity
Crystal R/sub c/ calibrations with an uncollimated, point x-ray source, 11:38404 (R;US)
Refractivity
Temperature dependence of the refractive index of silicon at elevated temperatures at several laser wavelengths, 11:38418 (J;US)
Ribbon-to-Sheet Method
Current status of silicon materials research for photovoltaic applications, 11:37759 (BA;US)
Segregation
Surface solidification and impurity segregation in amorphous silicon, 11:38423 (J;US)
Stresses
Stress and efficiency studies in EFG. Quarterly progress report, October 1-December 31, 1985, 11:37734 (R;US)
Surface Treatments
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
Vapor Deposited Coatings
Growth, nucleation, and electrical properties of molecular beam epitaxially grown, As-doped Ge on Si substrates, 11:38439 (J;US)

SILICON 28 REACTIONS
Compound-Nucleus Reactions
Search for superdeformation effects in ^{144}Gd, 11:39238 (J;US)
SILICON 28 TARGET
Alpha Reactions
Nuclear structure effects in preequilibrium reactions: α-induced reactions on /sup 24,25,26/Mg, ^{27}Al, and ^{28}Si, 11:39219 (J;US)
Neutron Reactions
Energy dependence of the local optical potential for neutron-nucleus scattering, 11:39221 (J;US)
Scattering of polarized and unpolarized neutrons from ^{28}Si and ^{32}S, 11:39223 (J;US)
Oxygen 18 Reactions
One-nucleon-transfer reactions induced by 352-MeV ^{18}O on ^{28}Si, 11:39220 (J;US)
SILICON 30
Energy Levels
Neutron, alpha and total widths and spin assignments for resonances in ^{31}S+n from 10—400 keV, 11:39222 (J;US)
SILICON 30 TARGET
Neutron Reactions
Optical models from low-energy s-, p- and d-wave cross sections, 11:39224 (J;US)
SILICON ALLOYS
Annealing
Icosahedral-phase formation by solid-state interdiffusion, 11:38325 (J;US)
Order-Disorder Transformations
Icosahedral-phase formation by solid-state interdiffusion, 11:38325 (J;US)
Physical Radiation Effects
Radiation-induced segregation to grain boundaries in a Ni-Si alloy, 11:38235 (R;US)
SILICON CARBIDES
Chemical Vapor Deposition
Thermodynamic analysis and kinetic implications of chemical vapor deposition of SiC from Si-C-Cl-H gas systems, 11:38374 (J;US)
Energy-Loss Spectroscopy
Microanalysis by electron energy loss spectroscopy at 300kV, 11:38352 (R;US)
Mechanical Properties
Ion beam modification of ceramics, 11:38382 (J;US)
Physical Radiation Effects
Growth of periodic structures in pyrolytic laser-deposited SiC, 11:38357 (J;US)
Ion beam modification of ceramics, 11:38382 (J;US)
Strains
Strain contrast in SiC whisker reinforced Al_2O_3, 11:38388 (R;US)
Synthesis
Plasma synthesis and characterization of ultrafine SiC, 11:38353 (R;US)
Tensile Properties
Effects of surface finish and grain size on the strength of sintered silicon carbide, 11:38373 (TJ;US)
SILICON HYDRIDES
See SILANES
SILICON OXIDES
See also QUARTZ
SILICA
Physical Radiation Effects
Investigation of the basic mechanisms of radiation effects on electronic materials and devices and development of hardening techniques. Volume 1. Technical report, 1 January 1982-1 January 1983, 11:38734 (R;US)
Raman Spectra
Structure of alkali-zinc silicate glasses by Raman spectroscopy, 11:38379 (J;US)
SILICON SOLAR CELLS
Adhesives
Thermally conductive silicone based materials for attaching concentrator solar cells to heat sinks, 11:37752 (BA;US)

Efficiency
High-efficiency silicon solar cells - Opportunity and challenge, 11:37760 (BA;US)
Impurities
Auger analysis of Si—H bonding and hydrogen concentration in hydrogenated amorphous silicon, 11:38446 (J;US)
Materials Testing
New generation photovoltaic technologies, 11:37751 (BA;CA)
Research Programs
High efficiency crystalline silicon solar cells. Third technical report; final technical report, 11:37733 (R;US)
New generation photovoltaic technologies, 11:37751 (BA;CA)
Status and future of government-supported amorphous silicon research in the United States, 11:37741 (R;US)
Reviews
New generation photovoltaic technologies, 11:37751 (BA;CA)

SILICONES
Thermal Conductivity
Thermally conductive silicone based materials for attaching concentrator solar cells to heat sinks, 11:37752 (BA;US)

SILOXANES
See also SILICONES
Raman Spectra
Raman spectroscopy of carboranes and polycarboranesiloxanes, 11:38492 (R;US)

SILVER
Chemical Bonds
Variable angle x-ray photoelectron spectroscopy and ion scattering spectroscopy study of the Ag/SiO_2 interface, 11:38319 (J;US)
Diffusion
Ion scattering spectroscopy and Auger electron spectroscopy depth profiles of silver—copper thin film interdiffusion, 11:38322 (J;US)
Ecological Concentration
Temporal trends of contamination of Puget Sound, 11:38902 (R;US)
Electrodeposition
Use of electrodeposited silver as an aid in diffusion welding, 11:38342 (J;US)
Impurities
Ion scattering spectroscopy and Auger electron spectroscopy depth profiles of silver—copper thin film interdiffusion, 11:38322 (J;US)
Interfaces
Variable angle x-ray photoelectron spectroscopy and ion scattering spectroscopy study of the Ag/SiO_2 interface, 11:38319 (J;US)
Magnetic Properties
Magnetic property changes in epitaxial metal film sandwiches, 11:38347 (J;NL)
Pairing Interactions
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Pion Minus Reactions
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Pion Plus Reactions
Application of a hot spot model to fragment emission from pion true absorption, 11:39266 (J;US)
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Proton Reactions
Nuclear reactions of silver with 0.8-TeV protons, 11:39240 (J;US)
Observation of A dependence in Koba-Nielsen-Olesen scaling distributions for high-energy hadron-nucleus interactions, 11:39152 (J;US)
Raman Spectroscopy
In situ Raman spectroscopy of anodic films formed on copper and silver in sodium hydroxide solution, 11:38476 (J;US)
Structural Models
Embedded-atom-method functions for the fcc metals Cu, Ag, Au, Ni, Pd, Pt, and their alloys, 11:38311 (J;US)
Surface Contamination
Variable angle x-ray photoelectron spectroscopy and ion scattering spectroscopy study of the Ag/SiO_2 interface, 11:38319 (J;US)
Surface Properties
Variable angle x-ray photoelectron spectroscopy and ion scattering spectroscopy study of the Ag/SiO_2 interface, 11:38319 (J;US)

SILVER SELENIDES
Crystal Growth
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)
Optical Properties
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)

SILVER SULFIDES
Crystal Growth
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)
Optical Properties
Growth and evaluation of $AgGaS_2$ and $AgGaSe_2$ for infrared nonlinear applications. Final Technical Report, 1 February 1982-31 December 1985, 11:38580 (R;US)

SIMS
See MASS SPECTROSCOPY

SIMULATORS (REACTOR)
See REACTOR SIMULATORS

SITE SELECTION
Information Systems
Disposal Site Information Management System, 11:37580 (RA;US)

SLABS
Thicker than PLATES, primarily for use in shielding studies.
Air Flow
Use of concrete hollow core slabs as a part of the heating and ventilation systems, 11:38184 (R;FI;In Finnish)
Heat Storage
Use of concrete hollow core slabs as a part of the heating and ventilation systems, 11:38184 (R;FI;In Finnish)

SLC
See STANFORD LINEAR COLLIDER

SLOW NEUTRONS
Neutron Sources
Production of slow neutrons using Doppler-shifting from a high-speed rotor and their application in fundamental research, 11:39275 (RA;US)

SLUDGES
See also SEWAGE SLUDGE
Behavior
Model of sludge behavior in nuclear plant steam generators. Final report, 11:37903 (R;US)

SLUGS (FUEL)

SLURRIES (FUEL)
See FUEL SLURRIES

SLURRY PIPELINES
Energy Conservation
Pipeline transport - an energy saving form of transportation, 11:38189 (R;DK;In Danish)
Transportation Systems
Pipeline transport - an energy saving form of transportation, 11:38189 (R;DK;In Danish)

SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE

SMOG
Air Pollution
Guidelines for using OZIPM-3 with CBM-X or optional mechanisms. Volume 1. Description of the Ozone Isopleth plotting package, Version 3. Final report, August 1982-July 1985, 11:38810 (R;US)
Guidelines for using OZIPM-3 with CBM-X or optional mechanisms. Volume 2. Computer code. Final report, August 1982-July 1985, 11:38823 (R;US)

OZIPM-3 (Ozone Isopleth Plotting with optional mechanisms, Version 3) source code: Software, 11:38811 (R;US)

SMOKE DETECTORS
Comparative Evaluations
Safe production and use of domestic fuels, part 2. Fire detectors, 11:37346 (R;FI;In Finnish)

SNG
See HIGH BTU GAS

SNG PLANTS
Economic Analysis
Analysis of the market and product costs for coal-derived high Btu gas, 11:37264 (R;US)

SOCIAL IMPACT
Information Needs
Challenges to socio-economic impact modeling: lessons from the Alaska OCS Program, 11:38921 (J;US)
Measuring Methods
Challenges to socio-economic impact modeling: lessons from the Alaska OCS Program, 11:38921 (J;US)

SODIUM CHLORIDES
Absorption
Effect of ionic interaction of chlorode-borate and iodide-borate on their absorption by Lemna minor L., 11:38970 (J;FR;FR)

SODIUM CITRATES
See SODIUM COMPOUNDS

SODIUM COMPOUNDS
See also SODIUM CHLORIDES
SODIUM HYDROXIDES
SODIUM IODIDES
SODIUM OXIDES
SODIUM SULFATES
Fluorescence
Relative fluorescent efficiency of sodium salicylate between 90 and 800 eV, 11:38525 (R;US)
Quantum Efficiency
Relative fluorescent efficiency of sodium salicylate between 90 and 800 eV, 11:38525 (R;US)

SODIUM HYDROXIDES
Chemical Preparation
Application of fuel cells to chlorine-caustic technology, 11:38141 (R;US)
Raman Spectroscopy
In situ Raman spectroscopy of anodic films formed on copper and silver in sodium hydroxide solution, 11:38476 (J;US)

SODIUM IODIDES
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)

SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS

SODIUM MINERALS
See MINERALS

SODIUM OXIDES
Raman Spectra
Structure of alkali-zinc silicate glasses by Raman spectroscopy, 11:38379 (J;US)

SODIUM SULFATES
Corrosive Effects
Role of molybdenum in the Na_2SO_4 induced corrosion of superalloys at high temperatures, 11:38252 (R;US)

SODIUM-SULFUR BATTERIES
Service Life
Sodium-sulfur battery systems development, 11:38074 (R;US)

SOILS
Acidification
Atmospheric deposition and cation leaching, 11:38861 (R;US)
Effects of acid rain, alone and in combination with gaseous pollutants, on growth and yield of crop plants, 11:38792 (R;US)
Carbon Cycle
Investigations of gas/water interactions in unsaturated soil using CO_2 and ^{222}Rn measurements, 11:38881 (R;DE;In German)
Contamination
Burial trench dynamic compaction demonstration at a humid site, 11:37584 (RA;US)
Distribution of polychlorinated biphenyls within Bonneville Power Administration substation, 11:38866 (RA;US)
Decontamination
Guidelines and alternatives for PCB soil-sampling programs, 11:37454 (RA;US)
Pilot plant studies for solvent extraction of polychlorinated biphenyl (PCB) from soil, 11:38867 (RA;US)
Solvent cleaning of PCB - contaminated soils, 11:38872 (RA;US)
Thermal treatment of PCBs and PCB-contaminated soils, 11:37842 (RA;US)
Erosion
Collapse and erosion at the low-level radioactive-waste burial site near Sheffield, Illinois, 11:37588 (RA;US)
Erosion control technology: a user's guide to the use of the Universal Soil Loss Equation at waste burial facilities, 11:37608 (R;US)
Status of corrective measures technology for shallow land burial at arid sites, 11:37586 (RA;US)
Monitoring
Inventory of current environmental monitoring projects in the US-Canadian transboundary region, 11:38101 (R;US)
Physical Properties
Variation in properties of nuclear test areas and media at the Nevada Test Site, 11:39008 (R;US)
Radionuclide Migration
Environmental monitoring at low-level waste shallow-land burial sites, 11:37560 (RA;US)
Evaluation and performance of the special wasteform lysimeters at a humid site, 11:37549 (RA;US)
Investigations of gas/water interactions in unsaturated soil using CO_2 and ^{222}Rn measurements, 11:38881 (R;DE;In German)
Radiological characterization requirements for planning remedial action at UMTRA project sites, 11:37660 (BA;US)
Stabilization
In situ vitrification large-scale operational acceptance test analysis, 11:37616 (R;US)
Vitrification
In situ vitrification of PCB-contaminated soils, 11:37461 (RA;US)

SOLAR ABSORBERS
Ceramics
[Thermal design techniques for masonry material]. Final report, 11:37799 (R;US)
Heat Transfer
Heat transfer in a solar radiation absorbing molten salt film flowing over an insulated substrate, 11:37803 (BA;US)
Paints
Progress on solar absorber selective paint research, 11:37806 (BA;US)

SOLAR ACTIVITY
See also SOLAR FLARES
SOLAR PROMINENCES
SOLAR RADIO BURSTS
SOLAR WIND
Meetings
Study of travelling interplanetary phenomena (STIP) workshop travel. Final Report, 11:39024 (R;US)

SOLAR ARCHITECTURE
Spectrally Selective Surfaces
Transparent superinsulating materials: new aspects in solar technology, 11:37790 (RA;FR)

SOLAR ATMOSPHERE

Antireflection Coatings
Effective antireflection coatings of transparent polymeric materials by gas-phase surface fluorination, 11:37807 (BA;US)

Technology Assessment
Solar systems with highly efficient collectors, 11:37800 (RA;FR)

SOLAR CONCENTRATORS

Research Programs
An overview of photovoltaic concentrator technology, 11:37804 (BA;US)

SOLAR DISTRICT HEATING

Technology Assessment
District heating by solar energy with heat storage, 11:37791 (RA;FR)

SOLAR DOMESTIC WATER HEATING
See SOLAR WATER HEATING

SOLAR ENERGY

Economics
Other aspect of solar energy utilization. Solar technologies export enhancement: a central European point of view, 11:37732 (RA;FR)

Heat Storage
Photochemical, electrochemical and thermochemical transformation and storage of solar energy: thermodynamic aspects, 11:37808 (RA;FR)

Meetings
Solar energy 85: resources, technologies, economics, 11:37728 (R;FR)

Technology Assessment
Technology assessment of solar energy utilization, 11:37736 (RA;FR)

SOLAR ENERGY CONVERSION
See also OCEAN THERMAL ENERGY CONVERSION

Reviews
Solar radiative energy, 11:37735 (RA;FR)

Thermochemical Heat Storage
Energy conversion processes supporting advanced thermal energy storage technologies (Particle catalyzed solar photodissociation; solid state radiative heat pump), 11:38067 (R;US)

SOLAR ENERGY RESEARCH INSTITUTE

Research Programs
Some aspects of long-range, high-risk photovoltaic research at SERI, 11:37757 (BA;US)

SOLAR FLARES
Solar-Geophysical Data Number 490, June 1985. Part 2 (comprehensive reports). Data for December 1984, March-May 1983, and miscellanea (reannouncement of PB86-121993 - see notes field for explanation), 11:39043 (R;US)

Absorption Spectra
Calculation of theoretical chromospheric models and the interpretation of solar spectra from rockets and spacecraft. Semiannual Report, 1 January-31 December 1985, 11:39021 (R;US)

Emission Spectra
Calculation of theoretical chromospheric models and the interpretation of solar spectra from rockets and spacecraft. Semiannual Report, 1 January-31 December 1985, 11:39021 (R;US)

Filaments
Two types of flare associated filament eruptions, 11:39028 (R;US)

Mathematical Models
Calculation of theoretical chromospheric models and the interpretation of solar spectra from rockets and spacecraft. Semiannual Report, 1 January-31 December 1985, 11:39021 (R;US)

Ionic charge distributions of energetic particles from solar flares. Semiannual Report, 1 July-31 December 1985, 11:39029 (R;US)

SOLAR MODELS
See STAR MODELS

SOLAR NEUTRINOS
Prior to July, 1975 information was indexed to NEUTRINOS.

Conversion
Yet another possible explanation of the solar-neutrino puzzle, 11:39017 (R;US)

Energy Spectra
Solar neutrinos from the decay of ^{8}B, 11:39047 (J;US)

SOLAR POWER PLANTS

SOLAR SPACE HEATING

Solar Collectors
Solar systems with highly efficient collectors, 11:37800 (RA;FR)

SOLAR THERMAL POWER PLANTS

Control Systems
Application of RELAP4/MOD6 to analysis of solar-thermal power plants: control system modelling, 11:37771 (R;US)

Economic Analysis
Economic evaluation of solar thermal energy systems using a Levelized Energy Cost approach, 11:37772 (BA;US)
Long-term technology goals for solar thermal energy systems, 11:37773 (BA;US)

Performance
Long-term technology goals for solar thermal energy systems, 11:37773 (BA;US)

Planning
Long-term technology goals for solar thermal energy systems, 11:37773 (BA;US)

Technology Assessment
Experiences with solar power, 11:37765 (RA;FR)

Solar energy: one decade of research and application, review and outlook, 11:37694 (RA;FR)

SOLAR WATER HEATERS

See also PASSIVE SOLAR WATER HEATERS

Performance Testing

Improved accuracy of solar energy system testing and measurements, 11:37798 (BA;US)

Thermosyphon Effect

Thermosyphon solar heating system at Lyngby. Results and experience after 1 year measurements, 11:37788 (R;DK;In Danish)

SOLAR WATER HEATING

Use for solar domestic water heating; not for process hot water.

Solar Collectors

Solar systems with highly efficient collectors, 11:37800 (RA;FR)

SOLAR WIND

Charged-Particle Reactions

Ion-release experiments in the solar wind, 11:39044 (R;US)

Interactions

Comet/solar wind transition region at Giacobini-Zinner, 11:39053 (J;US)

Interaction of heavy ions from comet P/Giacobini-Zinner with the solar wind, 11:39050 (J;US)

Simulation of the solar wind interaction with the outer regions of the coma, 11:39049 (J;US)

SOLID CLUSTERS

Absorptivity

Optical absorption by clusters of small metallic spheres, 11:38310 (J;US)

SOLID FUELS

See also BRIQUETS

Calorific Value

Sampling of solid indigenous fuels in Finland. Status report, 11:37746 (R;SE;In Swedish)

Drying

Back pressure drying of solid, moist fuels, 11:37359 (R;SE;In Swedish)

Gasification

Technical development in order to obtain satisfactory combustion, 11:37262 (RA;SE)

Quality Control

Sampling for analysis of biofuels, 11:37715 (R;SE;In Swedish)

Sampling

Sampling for analysis of biofuels, 11:37715 (R;SE;In Swedish)

Sampling of solid indigenous fuels in Finland. Status report, 11:37746 (R;SE;In Swedish)

SOLID STATE LASERS

See also NEODYMIUM LASERS

Depolarization

Slab geometry laser. Part 2. Thermal effects in a finite slab, 11:38573 (R;US)

Fluorescence

Radiationless deactivation of low-field chromium complexes in solids. Final technical report, 31 August 1982-31 December 1985, 11:38575 (R;US)

Focusing

Slab geometry laser. Part 2. Thermal effects in a finite slab, 11:38573 (R;US)

Fractures

Fracture of solid state laser slabs, 11:38585 (J;US)

Gain

Gain, lasing, and tuning characteristics of Ti:Al_2O_3, 11:38613 (BA;US)

Laser Materials

Fracture of solid state laser slabs, 11:38585 (J;US)

Gain, lasing, and tuning characteristics of Ti:Al_2O_3, 11:38613 (BA;US)

Strengthening of solid-state laser materials, 11:38606 (BA;US)

Light Sources

Recycling of optical radiation by flash-lamps, 11:38612 (BA;US)

Operation

Fracture of solid state laser slabs, 11:38585 (J;US)

Spectral characterization of a tunable alexandrite laser by rubidium absorption at 780 nm, 11:38603 (BA;US)

Optical Pumping

Gain, lasing, and tuning characteristics of Ti:Al_2O_3, 11:38613 (BA;US)

Recycling of optical radiation by flash-lamps, 11:38612 (BA;US)

Power

Fracture of solid state laser slabs, 11:38585 (J;US)

Thermal Stresses

Slab geometry laser. Part 2. Thermal effects in a finite slab, 11:38573 (R;US)

Tuning

Gain, lasing, and tuning characteristics of Ti:Al_2O_3, 11:38613 (BA;US)

Spectral characterization of a tunable alexandrite laser by rubidium absorption at 780 nm, 11:38603 (BA;US)

SOLIDS

Chemical Reactions

Shock-induced solid state chemistry: theoretical background, 11:38493 (R;US)

Electronic Structure

Calculating and predicting the properties of materials, 11:39281 (R;US)

Mathematical Models

Properties of molecular solids and fluids at high pressures and temperatures. [Final report], 11:39071 (R;US)

Optical Dispersion

Precise measurements of optical dispersion using a new interferometric technique, 11:39297 (J;US)

Physical Properties

Calculating and predicting the properties of materials, 11:39281 (R;US)

Plasmons

Many-electron effects in photoelectron core spectra, 11:39109 (J;US)

Shock Waves

Shock-induced solid state chemistry: theoretical background, 11:38493 (R;US)

Zone Refining

Versatile zone refiner for liquids and low-melting solids, 11:38567 (J;US)

SOLUTES

Diffusion

Generalization of one-dimensional solute transport. A stochastic-convective flow conceptualization, 11:38888 (R;US)

Intermolecular Forces

Correlation of solvatochromic effects with retention in supercritical fluid chromatography, 11:38472 (R;US)

SOLVENT-REFINED COAL PROCESS

See SRC PROCESS

SOLVENT-REFINING COAL PLANTS

See SRC PROCESS

SOLVENTS

Intermolecular Forces

Correlation of solvatochromic effects with retention in supercritical fluid chromatography, 11:38472 (R;US)

SONDES

See PROBES

SOOT

Anemometers

Determination of size and velocity of flue gas particulates, 11:38680 (R;DK;In Danish)

Chemical Reaction Yield

Detailed structure studies of a laminar, methane/air diffusion flame I. Optical Measurements, 11:37504 (BA;US)

Nucleation

Detailed structure studies of a laminar, methane/air diffusion flame I. Optical Measurements, 11:37504 (BA;US)

Particle Size

Determination of size and velocity of flue gas particulates, 11:38680 (R;DK;In Danish)

SOUND

See SOUND WAVES

SOUND WAVES
Scattering
Sound scattering from a thin rod in a viscous medium, 11:39294 (J;US)
SOUTH AFRICA
Coal Deposits
Distribution patterns relating to the proximate analysis of South African coals and their use as a basis for the interpretation of thermo-gravimetric data, 11:37294 (R;US)
SOUTH KOREA
See REPUBLIC OF KOREA
SOUTH TEXAS PROJECT-1 REACTOR
Bay City, Texas, USA
Critical Heat Flux
MDNBR 95/95 confidence interval determination for nonparametric CHF statistics, 11:37910 (J;US)
SOUTH TEXAS PROJECT-2 REACTOR
Bay City, Texas, USA
Critical Heat Flux
MDNBR 95/95 confidence interval determination for nonparametric CHF statistics, 11:37910 (J;US)
SOVIET UNION

Microstructural study of high energy density dissimilar metal welds, 11:38296 (R;US)
Microstructure
Review of effects of long-term aging on the mechanical properties and microstructures of types 304 and 316 stainless steel, 11:37946 (BA;US)
Oxidation
Chemical aspects of cesium iodide interaction in steam with 304 stainless steel and Inconel-600, 11:38253 (R;US)
Physical Radiation Effects
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Reactor Materials
Chemical aspects of cesium iodide interaction in steam with 304 stainless steel and Inconel-600, 11:38253 (R;US)
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Scaling
Changes in the oxide scale formed on 304 stainless steel induced by additions of H_2S to CO-CO_2-N_2 gas environments, 11:38326 (J;US)
Tensile Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Wear Resistance
Wear behavior of nitrogen-implanted metals, 11:38340 (J;US)
STAINLESS STEEL-304L
Gas Tungsten-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel, 11:38285 (R;US)

Weldability
Microstructural analysis of alloy 718 welds to Kovar and 304L, 11:38297 (R;US)
STAINLESS STEEL-308
Microstructure
Microstructure of rapidly quenched type 308 stainless steel weld filler metal and its implications on rapid solidification processes, 11:38339 (BA;NL)
Phase Transformations
Use of analytical electron microscopy in evaluating ferrite stability in austenitic stainless steel welds, 11:38232 (R;US)
STAINLESS STEEL-310
Corrosion
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
STAINLESS STEEL-316
Aging
Review of effects of long-term aging on the mechanical properties and microstructures of types 304 and 316 stainless steel, 11:37946 (BA;US)
Crack Propagation
Effects of irradiation on crack propagation during creep, 11:37936 (R;US)
Creep
Effects of irradiation on crack propagation during creep, 11:37936 (R;US)
Fracture Properties
Review of effects of long-term aging on the mechanical properties and microstructures of types 304 and 316 stainless steel, 11:37946 (BA;US)
Microstructure
Review of effects of long-term aging on the mechanical properties and microstructures of types 304 and 316 stainless steel, 11:37946 (BA;US)
Physical Radiation Effects
Effects of irradiation on crack propagation during creep, 11:37936 (R;US)
Reactor Materials
Effects of irradiation on crack propagation during creep, 11:37936 (R;US)
Welding
Heat measurements in inertia welding of aluminum to steel, 11:38628 (R;US)
STAINLESS STEEL-347
Corrosion
Corrosion/erosion of materials for fluidized bed combustion, 11:38299 (R;SE)
STAINLESS STEELS
See also STAINLESS STEEL-302
STAINLESS STEEL-304
STAINLESS STEEL-304L
STAINLESS STEEL-308
STAINLESS STEEL-310
STAINLESS STEEL-316

Atom Transport
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
Coatings
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
Corrosion Resistance
Corrosion of grate tubes in wood-fired hot-water boilers. Field tests at Vilhelmina Vaermeverk 1983-1984, 11:37716 (R;SE;In Swedish)
Diffusion Welding
Use of electrodeposited silver as an aid in diffusion welding, 11:38342 (J;US)
Gas Metal-Arc Welding
Welding procedure specification: manual gas tungsten arc and semiautomatic gas metal arc welding of chromium-nickel steel. Supplement 1. Records of procedure qualification tests, 11:38263 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Machine gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38265 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38264 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Semiautomatic gas metal arc welding of chromium-nickel steel, 11:38267 (R;US)
Gas Tungsten-Arc Welding
Gas tungsten arc welding of chromium-nickel steel to nickel-molybdenum-chromium-iron. Welding procedure specification. Supplement 1. Records of procedure qualification tests, 11:38288 (R;US)
Welding procedure specification: gas tungsten arc welding of chromium-nickel steel to chromium-molybdenum steel. Supplement 1. Records of procedure qualification tests, 11:38280 (R;US)
Welding procedure specification: manual gas tungsten arc and semiautomatic gas metal arc welding of chromium-nickel steel. Supplement 1. Records of procedure qualification tests, 11:38263 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Machine gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38265 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Manual gas tungsten arc and machine gas metal arc welding of chromium-nickel steel, 11:38264 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel, 11:38285 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-copper, 11:38286 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of chromium-nickel steel to nickel-chromium-iron, 11:38287 (R;US)
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc welding of austenitic chromium-nickel steel, 11:38266 (R;US)
Microstructure
Identification of G-phase in aged cast CF 8 type stainless steel, 11:38003 (J;US)
Phase Studies
Identification of G-phase in aged cast CF 8 type stainless steel, 11:38003 (J;US)
Physical Radiation Effects
Measurement of equilibrium and nonequilibrium segregation by x-ray microanalysis, 11:38228 (R;US)
Pitting Corrosion
Initation of pitting corrosion in martensitic stainless steels (17-4PH; 13-8Mo; Custom 450), 11:38293 (R;US)
Segregation
Measurement of equilibrium and nonequilibrium segregation by x-ray microanalysis, 11:38228 (R;US)
Shielded Metal-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Shielded metal arc welding of chromium-nickel steel, 11:38262 (R;US)
Stress Corrosion
Mechanisms and models for the stress corrosion cracking of stainless steels. A literature survey, 11:38300 (R;SE;In Swedish)
Surface Treatments
Migration of beryllium in the Impurity Study Experiment-B tokamak during the Beryllium Limiter Experiment, 11:39399 (J;US)
STANDARD MODEL
CP Invariance
CP violation and generation mixing, 11:39199 (J;US)
Supersymmetry
Higgs-boson masses in a supersymmetric extension of the standard model, 11:39190 (J;US)

STANDARDIZED TERMINOLOGY
Scientific and technical terminology in US translations, 11:39431 (R;US)
STANDARDS
Indexes
Nuclear Standards master index, 11:37984 (R;US)

STATISTICAL MECHANICS
Monte Carlo Method
Monte Carlo simulation of self-avoiding surfaces in three dimensions, 11:39296 (J;US)
STEAM GENERATION
See also COGENERATION
Coal
Coal Technology Reference Guide, 11:37372 (R;US)
Economic Analysis
Economic comparison of coal and wood for industrial steam generation, 11:37379 (BA;US)
STEAM GENERATORS
Cleaning
Steam generator chemical cleaning at Millstone Point II, 11:37911 (J;US)
Corrosion Denting
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)
Corrosion Products
Model of sludge behavior in nuclear plant steam generators. Final report, 11:37903 (R;US)
Design
Steam generator design considerations for modular HTGR plant, 11:37930 (R;US)
Destructive Testing
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)
Heat Exchangers
An automated aid for isolating defects in the heat exchanger tubing of nuclear steam generators, 11:38005 (BA;US)
Heat Transfer
Steam generator tube sampling: feasibility study. Final report, 11:37996 (R;US)
Hydraulics
Steam generator tube sampling: feasibility study. Final report, 11:37996 (R;US)
Nondestructive Testing
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)
Nozzles
Steam generator nozzle dam system, 11:37999 (J;US)
Pollution Control Equipment
Environmental assessment of an enhanced-oil-recovery steam generator equipped with an EPA (Environmental Protection Agency) heavy oil low-NOx burner. Volume 2. Data supplement. Final report, January 1984-January 1985, 11:38666 (R;US)
Sludges
Model of sludge behavior in nuclear plant steam generators. Final report, 11:37903 (R;US)
Tubes
Steam generator tube sampling: feasibility study. Final report, 11:37996 (R;US)
STEAM INJECTION
Environmental assessment of an enhanced-oil-recovery steam generator equipped with an EPA (Environmental Protection Agency) heavy oil low-NOx burner. Volume 2. Data supplement. Final report, January 1984-January 1985, 11:38666 (R;US)
Additives
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
Field Tests
Contracts for field projects and supporting research on enhanced oil recovery. Progress review No. 43, quarter ending June 30, 1985, 11:37423 (R;US)
STEEL-ASTM-A106
Fatigue
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Fracture Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Physical Radiation Effects
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Reactor Materials
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Tensile Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
STEEL-ASTM-A302
Fatigue
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Fracture Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Physical Radiation Effects
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Reactor Materials
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Tensile Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)

STEEL-ASTM-A387
Crack Propagation
The fatigue-crack growth and ductile fracture toughness behavior of ASTM A387 grade 91 steel, 11:38333 (BA;US)
Fatigue
The fatigue-crack growth and ductile fracture toughness behavior of ASTM A387 grade 91 steel, 11:38333 (BA;US)
Fracture Properties
The fatigue-crack growth and ductile fracture toughness behavior of ASTM A387 grade 91 steel, 11:38333 (BA;US)
STEEL-ASTM-A533-B
Fatigue
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Fracture Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Physical Radiation Effects
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Reactor Materials
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
Tensile Properties
Structural integrity of water reactor pressure boundary components. Annual report, 1985. Volume 4, 11:37859 (R;US)
STEELS

CARBON STEELS
FERRITIC STEELS
STAINLESS STEELS
STEEL-ASTM-A302
STEEL-ASTM-A387
Ablation
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Absorption Spectroscopy
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Corrosion
Laboratory study to evaluate the impact of NOx, SOx, and oxidants on the atmospheric corrosions of galvanized steel, 11:38290 (R;US)
Gas Tungsten-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc and shielded metal arc welding of AISI 41XX steels (4130 and 4142 steels), 11:38260 (R;US)
Joints
Fatigue tests of adhesively bounded joints between steel and glass fiber laminates, 11:38391 (R;DK;In Danish)
Laser Welding
Microstructural study of high energy density dissimilar metal welds, 11:38296 (R;US)
Laser-Radiation Heating
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Physical Radiation Effects
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Quantitative Chemical Analysis
Direct solid metal analysis by laser ablation into the inductively coupled plasma, 11:38334 (BA;US)
Reactor Materials
Stress relief cracking in nuclear pressure vessel steels. Final report, 11:37997 (R;US)
Shielded Metal-Arc Welding
Welding procedure specification. Supplement 1. Records of procedure qualification tests. Gas tungsten arc and shielded metal arc welding of AISI 41XX steels (4130 and 4142 steels), 11:38260 (R;US)
Wear Resistance
Wear behavior of nitrogen-implanted metals, 11:38340 (J;US)
STELLAR RADIATION
See also SOLAR RADIATION
Absorption Spectra
Calculation of theoretical chromospheric models and the interpretation of solar spectra from rockets and spacecraft. Semiannual Report, 1 January-31 December 1985, 11:39021 (R;US)
Emission Spectra
Calculation of theoretical chromospheric models and the interpretation of solar spectra from rockets and spacecraft. Semiannual Report, 1 January-31 December 1985, 11:39021 (R;US)
Mathematical Models
Calculation of theoretical chromospheric models and the interpretation of solar spectra from rockets and spacecraft. Semiannual Report, 1 January-31 December 1985, 11:39021 (R;US)
STELLAR WINDS
Excludes SOLAR WIND.
Wave Propagation
Theoretical studies of chromospheres and winds in cool stars. Semiannual Progress Report, 1 April-30 September 1985, 11:39023 (R;US)

STRESS CORROSION
Mathematical Models
Mechanisms and models for the stress corrosion cracking of stainless steels. A literature survey, 11:38300 (R;SE;In Swedish)
Reviews
Mechanisms and models for the stress corrosion cracking of stainless steels. A literature survey, 11:38300 (R;SE;In Swedish)

STRING MODELS
Treating the interactions of extended particles through breaking and connection of strings.
Superstrings and geometry of superspace, 11:39196 (R;US)
Four-Dimensional Calculations
Interacting parastrings, 11:39197 (J;US)
Many-Dimensional Calculations
Non-Abelian symmetries from higher dimensions in string theories, 11:39045 (J;US)
Supersymmetry
Interacting parastrings, 11:39197 (J;US)

STRONG INTERACTIONS
Coupling Constants
Measurement of the photon structure function F_2sup(γ) in the Q^2 range of 1.5-16 GeV^2, 11:39147 (R;DE;In German)

STRONTIUM 85
Leaching
Leaching studies of low-level radioactive waste forms, 11:37551 (RA;US)

STRONTIUM 86 TARGET
Neutron Reactions
Neutron capture cross sections for ^{86}Sr and ^{87}Sr at stellar temperatures. Revision 1, 11:39234 (R;US)

STRONTIUM 87 TARGET
Neutron Reactions
Neutron capture cross sections for ^{86}Sr and ^{87}Sr at stellar temperatures. Revision 1, 11:39234 (R;US)

STRONTIUM 90
Radioactive Waste Disposal
Burial trench dynamic compaction demonstration at a humid site, 11:37584 (RA;US)
Radioecological Concentration
Evaluation and performance of the special wasteform lysimeters at a humid site, 11:37549 (RA;US)

STRONTIUM CHLORIDES
Crystal Structure
Calcium and strontium dichloride hexahydrates by neutron diffraction, 11:38499 (J;DK)

STRONTIUM FLUORIDES
Optical Properties
Study of possible solarization - related impurities in CaF_2 and other fluorides, 11:38450 (BA;US)
Quantitative Chemical Analysis
Study of possible solarization - related impurities in CaF_2 and other fluorides, 11:38450 (BA;US)
Spectrophotometry
Study of possible solarization - related impurities in CaF_2 and other fluorides, 11:38450 (BA;US)

STRONTIUM ISOTOPES

SULFUR DIOXIDE
Absorption
Removal of SO_2 from simulated flue gas by magnesia spray absorption: parameters affecting removal efficiency and products, 11:38832 (J;US)
Air Pollution Control
A utility's view of the Ebara E-Beam NO/sub x//SO/sub x/ removal process, 11:37854 (BA;US)
Air Pollution Monitoring
Analysis of recent sulfur wet deposition and SO_2 emissions trends in Eastern North America, 11:38845 (J;US)
Corrosive Effects
Laboratory study to evaluate the impact of NOx, SOx, and oxidants on the atmospheric corrosions of galvanized steel, 11:38290 (R;US)
Deposition
Dry deposition to snow in an urban area, 11:38847 (J;US)
Oxidation
Comparison of chemical mechanisms for regional acid deposition, 11:38850 (J;US)
Removal
A utility's view of the Ebara E-Beam NO/sub x//SO/sub x/ removal process, 11:37854 (BA;US)
Alternative method for the removal of oxides of nitrogen and sulfur from combustion processes. Second quarterly technical status report, September 17-March 31, 1986, 11:38531 (R;US)
Chemistry of a flue gas combined NO/sub x/ and SO_2 scrubber employing ferrous cysteine additives, 11:37312 (R;US)
Removal of SO_2 from simulated flue gas by magnesia spray absorption: parameters affecting removal efficiency and products, 11:38832 (J;US)
Removal of sulfur and nitrogen containing pollutants from discharge gases, 11:37314 (P;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Cross Sections
Electron-impact ionization of Mg-like ions: S^{4+}, Cl^{5+}, and Ar^{6+}, 11:39086 (J;US)
Electron-Ion Collisions
Contributions of excitation autoionization to electron-impact ionization of Mg-like Al^{+}, S^{4+}, Cl^{5+}, and Ar^{6+} ions, 11:39089 (J;US)
Electron-impact ionization of Mg-like ions: S^{4+}, Cl^{5+}, and Ar^{6+}, 11:39086 (J;US)
Electron-impact ionization in the magnesium-isoelectronic sequence, 11:39087 (J;US)
Ion-Atom Collisions
Resonant behavior in the projectile K x-ray yield associated with electron capture in ion-atom collisions, 11:39104 (J;US)
SULFUR OXIDES
See also SULFUR DIOXIDE
Absorption Spectra
Ergodic behavior and the anomalous continuum fluorescence of small molecules, 11:38508 (BA;US)
Air Pollution Abatement
Evaluation of non-US coals emission performance with the distributed mixing burner. IEA-low NOsub(x)/Sosub(x) burner project stage II, 11:37851 (R;SE)
Emission Spectra
Ergodic behavior and the anomalous continuum fluorescence of small molecules, 11:38508 (BA;US)
SULFUR SULFIDES
See SULFUR
SUMMER-1 REACTOR
Power Distribution
PWR-PSMS benchmarking using ex-core information from the Summer-1 plant, 11:37888 (J;US)
Reactor Monitoring Systems
PWR-PSMS benchmarking using ex-core information from the Summer-1 plant, 11:37888 (J;US)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Equipment Protection Devices
Coil protection for a utility scale superconducting magnetic energy storage plant, 11:38062 (R;US)
SUPERCONDUCTING MAGNETS
Computer-Aided Design
Superconducting magnet. Final Report, 11:38553 (R;US)
Design
5-cm, no iron SSC 6-m dipole test program, 11:38549 (R;US)
Materials Testing
Development of radiation-resistant organic insulators for magnetic fusion energy applications, 11:39420 (BA;US)
Organic Insulators
Development of radiation-resistant organic insulators for magnetic fusion energy applications, 11:39420 (BA;US)
Performance Testing
Superconducting magnet. Final Report, 11:38553 (R;US)
Physical Radiation Effects
Development of radiation-resistant organic insulators for magnetic fusion energy applications, 11:39420 (BA;US)
Supports
Design of 15 mm collars for SSC dipole magnets, 11:38704 (R;US)
SUPERCONDUCTING QUANTUM INTERFERENCE DEVI
See SQUID DEVICES
SUPERCONDUCTING SUPER COLLIDER
Superconducting Magnets
5-cm, no iron SSC 6-m dipole test program, 11:38549 (R;US)
SUPERCONDUCTING WIRES
Fabrication
Nb_3Sn(Ti) powder metallurgy processed high field superconductors, 11:38309 (J;US)
SUPERCONDUCTORS
Comparative Evaluations
Survey of high field superconducting material for accelerator magnets, 11:38705 (R;US)
Fabrication
Survey of high field superconducting material for accelerator magnets, 11:38705 (R;US)
Kapitza Resistance
Thermal impedance to normal and superconducting metals, 11:38314 (J;US)
Knight Shift
Muon spin relaxation and Knight shift in the heavy-fermion superconductor UPt_3, 11:38246 (R;US)
Relaxation
Muon spin relaxation and Knight shift in the heavy-fermion superconductor UPt_3, 11:38246 (R;US)

Thermal Conductivity
Thermal impedance to normal and superconducting metals, 11:38314 (J;US)
SUPERCRITICAL FLOW
See TURBULENT FLOW
SUPERCRITICAL FLUID CHROMATOGRAPHY
Correlation of solvatochromic effects with retention in supercritical fluid chromatography, 11:38472 (R;US)
SUPERGIANT STARS
Wave Propagation
Theoretical studies of chromospheres and winds in cool stars. Semiannual Progress Report, 1 April-30 September 1985, 11:39023 (R;US)
SUPERGRAVITY
Particle physics and the standard cosmology, 11:39167 (R;GB)
SUPERHEAVY ELEMENTS
See TRANS 104 ELEMENTS
SUPERLATTICES
Charged-Particle Transport
Diffusion dynamics of holes in In/sub x-italic/Ga/sub 1-//sub x-italic/As/GaAs strained-layer superlattices, 11:38420 (J;US)
Fabrication
Conditions for uniform growth of GaAs/sub 1-//sub x-italic/P/sub x-italic/ superlattices, 11:38414 (J;US)
Ion Implantation
Zinc-implantation-disordered (InGa)As/GaAs strained-layer superlattice diodes, 11:38416 (J;US)
Microstructure
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Molecular Beam Epitaxy
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Physical Radiation Effects
Zinc-implantation-disordered (InGa)As/GaAs strained-layer superlattice diodes, 11:38416 (J;US)
Positron Channeling
Possibility of obtaining coherent radiation from a solid state undulator, 11:38586 (J;US)
SUPERSYMMETRY
Particle physics and the standard cosmology, 11:39167 (R;GB)
Postulated Particles
Gauginos from p anti p collisions, 11:39159 (R;US)
Proton-Antiproton Interactions
Large missing psub(T) events and supersymmetry, 11:39181 (R;DE)
Quantum Chromodynamics
Non-perturbative contribution to the vacuum energy in supersymmetric QCD, 11:39182 (R;DE)
Yang-Mills Theory
On the contribution of torons to the vacuum energy in Super-Yang-Mills theory, 11:39183 (R;DE)
SURFACE MINING
Environmental Effects
Environmental aspects of peat deposits development in USSR and the problems of its ecological and economic valuation, 11:37324 (RA;SE)
Land Reclamation
Highwall elimination and return to approximate original contour as required in the Surface Mining Control and Reclamation Act of 1977. Final report, 11:37342 (R;US)
Surface-mine reclamation at the Elkins Mine Drainage Demonstration Project after 17 years, 11:38885 (R;US)
Revegetation
Environmental aspects of peat deposits development in USSR and the problems of its ecological and economic valuation, 11:37324 (RA;SE)
Water Pollution
Drainage water quality of peat mining areas, 11:37319 (RA;SE)
Nutrient transport in runoff water from Finnish peatland drainage and peat mining areas, 11:37320 (RA;SE)
SURFACE MINING ACTS
Highwall elimination and return to approximate original contour as required in the Surface Mining Control and Reclamation Act of 1977. Final report, 11:37342 (R;US)
SURFACE WATERS

PONDS
STREAMS
Acidification
Acid rain. Federal research into effects on waters and forests, 11:38920 (R;US)
Monitoring
Some new cost-effective approaches for measuring organics associated with hazardous wastes, 11:38892 (R;US)
Radioactivity
Pu(V) as the stable form of oxidized plutonium in natural waters, 11:38912 (J;NL)
Radionuclide Migration
Environmental monitoring at low-level waste shallow-land burial sites, 11:37560 (RA;US)
Long-term monitoring for closed sites, 11:37556 (RA;US)
Pu(V) as the stable form of oxidized plutonium in natural waters, 11:38912 (J;NL)
SURFACE-ACTIVE AGENTS
See SURFACTANTS
SURFACES
Atom Collisions
Temperature dependence of diffracted-beam intensities in atom-surface scattering. Annual technical report, 11:39067 (R;US)
Blackbody Radiation
Surface thermography, 11:39404 (J;US)
Desorption
Electron- and photon-stimulated desorption, 11:39300 (J;US)
Heat Flux
Surface thermography, 11:39404 (J;US)
Ion Collisions
Detection of surface glow related to spacecraft glow phenomena, 11:39094 (J;US)
Molecule Collisions
Mean-trajectory Gaussian wave-packet approach to rotationally inelastic molecule-surface diffraction. Annual report, 11:39068 (R;US)
Multiple Gaussian wave-packet theory of H_2 diffraction and rotational excitation by collision with solid surfaces. Annual report, 11:39069 (R;US)
Temperature Measurement
Surface thermography, 11:39404 (J;US)
Thermography
Surface thermography, 11:39404 (J;US)
SURFACTANTS
Testing CO_2-foam for mobility control at Rock Creek, 11:37436 (BA;US)
Losses
Investigation of surfactant retention. Part 3 of DGMK-project 295 'Basical investigations for the selection and preparation of field application of tertiary oil recovery by chemical flooding'. Final report, 11:37421 (R;DE;In German)
SURPLUS NUCLEAR FACILITIES
US DOE surplus facilities management program (SFMP). International technology exchange activities, 11:37657 (R;US)
SURRY POWER STATION UNIT-1
See SURRY-1 REACTOR
SURRY POWER STATION UNIT-2
See SURRY-2 REACTOR
SURRY-1 REACTOR
Gravel Neck, Virginia, USA
Power Generation
Plant uprate: an economic evaluation and implementation approach, 11:37906 (J;US)
SURRY-2 REACTOR
Gravel Neck, Virginia, USA
Power Generation
Plant uprate: an economic evaluation and implementation approach, 11:37906 (J;US)
Reactor Materials
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)

Steam Generators
Observation of denting and other deterioration in the surry steam generator, 11:37929 (BA;US)
SURVEY MONITORS
Tissue-Equivalent Detectors
Field tests of a portable tissue equivalent survey meter for monitoring mixed beta/gamma radiation fields, 11:38722 (R;US)
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SWAMPS
Energy Balance
Water balance of swamps in Jamaica, 11:37327 (RA;SE)
Land Reclamation
Aspects on the reclamation of cut-away bogs, 11:37391 (RA;SE)
Land Use
Peat-bog converted back to lake by planned harvesting, 11:37325 (RA;SE)
Mass Transfer
Water balance of swamps in Jamaica, 11:37327 (RA;SE)
SWEDEN
Aquatic Ecosystems
Mercury. Occurrence and turnover of mercury in the environment. Status report October 1985, 11:38903 (R;SE;In Swedish)
Electric Utilities
Search for excellence: a progress report from the Swedish State Power Board, 11:37977 (J;US)
Energy Policy
Energy survey. Forecasting 1984-1990, 11:38081 (R;SE;In Swedish)
Peat combustion - environmental effects and emission limits, 11:37365 (RA;SE)
Energy Sources
Energy in Dalecarlia in 1990 - calculations of energy sources utilized in the heating plants, 11:38105 (R;SE;In Swedish)
Energy Systems
Maritime energy. Conditions for physical planning, 11:38078 (R;SE;In Swedish)
Fuel Supplies
Energy survey. Forecasting 1984-1990, 11:38081 (R;SE;In Swedish)
Government Policies
National energy administration - contributions and plans for development of peat land, 11:38109 (RA;SE)
National Program Plans
National energy administration - contributions and plans for development of peat land, 11:38109 (RA;SE)
Nuclear Power Plants
Search for excellence: a progress report from the Swedish State Power Board, 11:37977 (J;US)
Pollution Regulations
Peat combustion - environmental effects and emission limits, 11:37365 (RA;SE)
Terrestrial Ecosystems
Mercury. Occurrence and turnover of mercury in the environment. Status report October 1985, 11:38903 (R;SE;In Swedish)
Water Quality
Water quality and regional development. Contributions to the Swedish water conservation history of the last century with examples from the Motala River Basin, 11:38097 (R;SE;In Swedish)
SWIMMING POOL REACTORS
See POOL TYPE REACTORS
SWITCHING CIRCUITS
Design
DC switching regulated power supply for driving an inductive load, 11:38658 (P;US)
SYMPLECTIC GROUPS
See SP GROUPS
SYNCHROPHASOTRONS
See SYNCHROTRONS
SYNCHROTRON RADIATION
Vuv (vacuum-ultraviolet) and x-ray sources for atomic and molecular science. Final report, 11:39074 (R;US)
Beam Transport
VUV-soft x-ray beamline for spectroscopy and calibration, 11:38703 (R;US)
SYNCHROTRON RADIATION SOURCES
See also NSLS
Superconducting Magnets
Concept for a synchrotron light source with superconducting bending magnets for the production of microstructures by the LIGA-process, 11:38714 (R;DE;In German)
SYNCHROTRONS
See also FERMILAB ACCELERATOR
LAMPF II SYNCHROTRON
NSLS
Beam Dynamics
Calculation of polarization effects, 11:38699 (BA;US)
Design
Present status of the Bevalac and design outline of proposed medical accelerator, 11:38684 (R;US)
SYNTHETIC FUELS
See also ALCOHOL FUELS
PYROLYTIC OILS
Chemical Analysis
A ranking tool for potentially carcinogenic polynuclear aromatic compounds in synfuel products, 11:38475 (J;US)
Toxicity
Pathologic findings in laboratory animals exposed to hydrocarbon fuels of military interest, 11:38941 (R;US)
SYNTHETIC NATURAL GAS
See HIGH BTU GAS

T

T INVARIANCE
Symmetry Breaking
Spontaneous breaking of parity in (2 + 1)-dimensional QED, 11:39189 (J;US)
Supplementary evidence for T violation, 11:39192 (J;US)
T TAURI STARS
Wave Propagation
Theoretical studies of chromospheres and winds in cool stars. Semiannual Progress Report, 1 April-30 September 1985, 11:39023 (R;US)
T-10 TOKAMAK
Plasma Diagnostics
Application of the resonant fluorescence method to the diagnostics of helium-like carbon in the T-10 tokamak, 11:39329 (TG;US)
TAILINGS
Solid residue separated in the preparation of various products.
See also MILL TAILINGS
Fluidized-Bed Combustion
Recovery of energy by fluidised combustion of waste material arising from coal mining and coal processing. Final report, 11:37308 (R;DE)
TAIWAN
Nuclear Power Plants
Taipower's philosophy and practices for management of its nuclear power development program, 11:37975 (J;US)
TANDEM ELECTROSTATIC ACCELERATORS
Prior to February 1979,information was indexed to Van de Graaff Accelerators.
Computerized Control Systems
Predicting tandem parameters, 11:38701 (RA;US)
TANDEM MIRROR DEVICES
See TMR REACTORS
TMX DEVICES
TANDEM MIRROR TYPE REACTORS
See TMR REACTORS
TANDEM MIRRORS
Prior to September 1983 this concept was indexed to TMX DEVICES.
See also TMX DEVICES

Plasma Diagnostics
A direct indication of plasma potential diagnostic with fast time response and high accuracy based on a differential emissive probe, 11:39343 (BA;US)

TANK FARMS
See STORAGE FACILITIES

TANTALUM
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 11:39076 (R;US)
Photoemission
VUV synchrotron light as a technique for studying the interface quality and properties of thin overlayers, 11:38337 (J;US)

TANTALUM 181
Differential PAC
Structural phase transitions in HfV$_2$Hsub(x) and Zrsub(0.99)Hfsub(0.01)V$_2$Hsub(x) observed in time differential perturbed angular correlation studies, 11:38241 (R;DE;In German)

TANTALUM 181 TARGET
Neutron Reactions
Neutron scattering on deformed nuclei, 11:39216 (J;US)

TATB
Photoacoustic Spectroscopy
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Photolysis
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Raman Spectra
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)
Raman Spectroscopy
Single-pulse Raman and photoacoustic spectroscopy studies of triaminotrinitrobenzene (TATB) and related compounds, 11:38758 (BA;US)

TECHNOLOGY TRANSFER
Marketing Research
Approaching the market with new technologies, 11:38086 (R;US)

TELESCOPES
Design
Grazing Incidence Beam Expander, 11:38597 (BA;US)
Fabrication
Grazing Incidence Beam Expander, 11:38597 (BA;US)

TELLURIUM 128 TARGET
Sulfur 34 Reactions
Evolving collectivity at high spins in ^{157}Er, ^{158}Er, and ^{160}Er, 11:39244 (J;US)

TEM (MICROSCOPY)
See TRANSMISSION ELECTRON MICROSCOPY

TENNESSEE
Rift Zones
New Madrid Seismotectonic Program. Final report, 11:38991 (R;US)

TERRESTRIAL ECOSYSTEMS
See also SWAMPS
Acidification
Remote sensing to detect ecological impacts associated with acid deposition. Final report, 11:38879 (R;US)

TERTIARY RECOVERY
See ENHANCED RECOVERY

TETRAMETHYLTETRASELENAFULVALENE
See TMTSF

TEXAS
Radioactive Waste Disposal
Texas situation, 11:37596 (RA;US)
Salt Deposits
Salt dissolution and collapse at the Wink Sink in West Texas, 11:39002 (R;US)

TEXAS EXPERIMENTAL TOKAMAK
See TEXT DEVICES

TEXT DEVICES
Plasma Diagnostics
Estimation of linear and quadratic transfer fuctions for fully developed turbulence, 11:39352 (BA;US)
Plasma Waves
Estimation of linear and quadratic transfer fuctions for fully developed turbulence, 11:39352 (BA;US)

TFTR DEVICE
See TFTR TOKAMAK

TFTR REACTORS

TFTR TOKAMAK
Breeding Blankets
The TFTR Lithium Blanket Module Program - A status report, 11:39412 (BA;US)
Computerized Control Systems
Tokamak Fusion Test Reactor gas injection control system design and operation, 11:39386 (J;US)
Data Acquisition Systems
A survey of TFTR diagnostics, 11:39344 (BA;US)
Degassing
Chromium getter studies in the Tokamak Fusion Test Reactor, 11:39403 (J;US)
Gas Injection
Tokamak Fusion Test Reactor gas injection control system design and operation, 11:39386 (J;US)
Getters
Chromium getter studies in the Tokamak Fusion Test Reactor, 11:39403 (J;US)
Impurities
Chromium getter studies in the Tokamak Fusion Test Reactor, 11:39403 (J;US)
Limiters
Hydrogen isotope exchange and conditioning in graphite limiters used in the Tokamak Fusion Test Reactor, 11:39398 (J;US)
Nuclear microprobe analysis. Applications, 11:39364 (R;US)
Surface analysis of 1984/1985 Tokamak Fusion Test Reactor limiter tiles, 11:39397 (J;US)
Pellet Injection
Operation of a repeating pneumatic hydrogen pellet injector on the Tokamak Fusion Test Reactor, 11:39389 (J;US)
Performance
A survey of TFTR diagnostics, 11:39344 (BA;US)
Plasma Confinement
Confinement of high-density pellet-fueled discharges in TFTR, 11:39307 (R;US)
Plasma Diagnostics
Characterization of the Tokamak Fusion Test Reactor plasma edge by Langmuir—calorimeter probes, 11:39327 (J;US)
Long-term changes in the sensitivity of quadrupole mass spectrometers, 11:39323 (J;US)
Plasma Scrape-Off Layer
Characterization of the Tokamak Fusion Test Reactor plasma edge by Langmuir—calorimeter probes, 11:39327 (J;US)
Reactor Components
Remote maintenance of TFTR components, 11:39417 (BA;US)

THALASSEMIA
Hematology
Hematology of a murine β-thalassemia: a longitudinal study, 11:38942 (J;US)

THALLIUM
Quantitative Chemical Analysis
Trace element analysis of the heavy metals lead, cadmium and thallium in water and samples of organic matter using mass spectroscopy and isotope dilution analysis, 11:38897 (R;DE;In German)

THERMAL CONDUCTIVITY
Mathematical Models
Measurement and prediction of liquid mixture thermal conductivity and viscosity. Final report, 11:38512 (R;US)

THERMAL DECOMPOSITION
See PYROLYSIS

THERMAL ENERGY STORAGE EQUIPMENT
Energy conversion processes supporting advanced thermal energy storage technologies (Particle catalyzed solar

photodissociation; solid state radiative heat pump), 11:38067 (R;US)
Aquifers
Aquifer thermal energy storage in the United States, 11:38070 (R;US)
High temperature Aquifer Thermal Energy Storage. Report on preliminary research, design and construction of high-temperature Aquifer Thermal Energy Storage, 11:38068 (R;DK;In Danish)
Initial study of thermal energy storage in unconfined aquifers (UCATES), 11:38069 (R;US)
Cold Storage
Dual temperature thermal storage with complex compounds, 11:38064 (R;US)
Control Systems
Impact of operation and control strategy on the performance of a thermal energy storage system, 11:38066 (R;US)
Heat Storage
Dual temperature thermal storage with complex compounds, 11:38064 (R;US)
Performance
Impact of operation and control strategy on the performance of a thermal energy storage system, 11:38066 (R;US)

THERMAL INSULATION
Control
Control methods for the insulation of district heating pipe joints, 11:38181 (R;SE;In Swedish)
Fabrication
Carbon-bonded carbon fiber insulation for radioisotope space power systems, 11:37691 (J;US)
Physical Properties
Carbon-bonded carbon fiber insulation for radioisotope space power systems, 11:37691 (J;US)

THERMAL MASS
Parametric Analysis
Parametric analysis of thermal mass in residential buildings, 11:38160 (R;US)

THERMAL POLLUTION (AIR)
See AIR POLLUTION

THERMAL POLLUTION (WATER)
See WATER POLLUTION

THERMAL POWER PLANTS

TIN ALLOYS
Critical Current
Nb_3Sn(Ti) powder metallurgy processed high field superconductors, 11:38309 (J;US)
Powder Metallurgy
Nb_3Sn(Ti) powder metallurgy processed high field superconductors, 11:38309 (J;US)
TIN OXIDES
Electric Conductivity
Electrical conductivity, Seebeck Coefficient, and structure of In_2O_3-SnO_2, 11:38372 (J;US)
Electrical Properties
Ion-beam sputtered indium tin oxide for InP solar cells, 11:37748 (J;US)
Optical Properties
Ion-beam sputtered indium tin oxide for InP solar cells, 11:37748 (J;US)
Seebeck Effect
Electrical conductivity, Seebeck Coefficient, and structure of In_2O_3-SnO_2, 11:38372 (J;US)
Sputtering
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)
Ion-beam sputtered indium tin oxide for InP solar cells, 11:37748 (J;US)
Surface Coating
Effect of plasma exposure on the performance of indium tin oxide/InP solar cells prepared by radio-frequency and ion-beam sputtering, 11:37749 (J;US)
TITANIUM
Diffusion
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)
Electronic Structure
Metal-derived band gap states: Ti on GaAs(110), 11:38442 (J;US)
Interfaces
Metal-derived band gap states: Ti on GaAs(110), 11:38442 (J;US)
Uses
Offshore use of titanium - benefits and possible limitations, 11:38239 (R;NO)
TITANIUM 47
Isotope Effects
EPR observations of trivalent titanium in orthophosphate single crystals, 11:38495 (J;US)
TITANIUM 48
Energy Levels
Half-life limit for $^{48}Ca(2\beta^-)^{48}Ti(0_2^+,2997)$, 11:39226 (J;US)
TITANIUM 49
Isotope Effects
EPR observations of trivalent titanium in orthophosphate single crystals, 11:38495 (J;US)
TITANIUM 51
Energy Levels
Nuclear data sheets for A = 51, 11:39230 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 51, 11:39230 (J;US)
TITANIUM ALLOYS
See also ALLOY-A-286
TITANIUM BASE ALLOYS

Gas Tungsten-Arc Welding
Welding procedure specification: gas tungsten arc welding of nickel-molybdenum-chromium-iron. Supplement 1. Records of procedure qualification tests, 11:38277 (R;US)
Sorptive Properties
Direct coal liquefaction using iron-titanium hydride as a hydrogen distribution and catalytic material. Final report, 11:37269 (R;US)

TITANIUM BASE ALLOYS
Diffusion
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)
Powder Metallurgy
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)
Synthesis
Formation of amorphous alloys by the mechanical alloying of crystalline powders of pure metals and powders of intermetallics, 11:38306 (J;US)
Wear Resistance
Wear behavior of nitrogen-implanted metals, 11:38340 (J;US)

TITANIUM HYDRIDES
Catalytic Effects
Direct coal liquefaction using iron-titanium hydride as a hydrogen distribution and catalytic material. Final report, 11:37269 (R;US)

TITANIUM IONS
Stimulated Emission
Gain, lasing, and tuning characteristics of Ti:Al_2O_3, 11:38613 (BA;US)

TITANIUM NITRIDES
Deposition
Microstructure evolution in TiN films reactively sputter deposited on multiphase substrates, 11:38360 (J;US)

TITANIUM OXIDES
Damage
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Laser-Radiation Heating
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Optical Properties
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Physical Radiation Effects
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Raman Spectroscopy
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)

TMR REACTORS
Design
Conceptual design of a deuterium-^{3}He fueled tandem mirror reactor satellite/breeder system, 11:39381 (J;US)

TMTSF
Electronic Structure
Effect of magnetic fields on the electronic structure of density-wave systems, 11:38409 (R;US)
Pressure Effects
Bechgaard salts: spin density wave transitions in a magnetic field, 11:38756 (R;US)

TMX DEVICES
ECR Heating
Ecrh heating experiments at $\omega = 2\omega$/sub CE/ in the end plugs of the phaedrus tandem mirror, 11:39341 (BA;US)
First Wall
Infrared thermography of first wall components on the Tandem Mirror Experiment Upgrade, 11:39322 (J;US)
Impurities
Influence of impurity and particle control on Tandem Mirror Experiment Upgrade plasma operation, 11:39396 (J;US)
Neutral Atom Beam Injection
Analysis of halo-recycler operation on TMX-U, 11:39342 (BA;US)
Operation
Influence of impurity and particle control on Tandem Mirror Experiment Upgrade plasma operation, 11:39396 (J;US)
Plasma Diagnostics
Calibration and characterization of Bayard—Alpert gauges operating in high magnetic fields, 11:39401 (J;US)
Infrared thermography of first wall components on the Tandem Mirror Experiment Upgrade, 11:39322 (J;US)
Plasma Heating
Analysis of halo-recycler operation on TMX-U, 11:39342 (BA;US)
Plasma Instability
Octopole and hexapole end cells for tandem mirrors, 11:39351 (BA;US)

TOKAMAK DEVICES
See also ALCATOR DEVICE
ASDEX TOKAMAK
PDX DEVICES
T-10 TOKAMAK
TEXT DEVICES
Alfven Waves
Papers contributed to the 13th European conference on controlled fusion and plasma physics by the TCA Group. Schliersee, Germany, April 1986, 11:39313 (R;CH)
Current-Drive Heating
Computing of RF heating and current-drive in tokomaks, 11:39314 (R;CH)
First Wall
Simulations of Tokamak sputtering conditions with high energy particle beams, 11:39413 (BA;US)
High-Frequency Heating
Computing of RF heating and current-drive in tokomaks, 11:39314 (R;CH)
Impurities
Particle and impurity control in toroidal fusion devices, 11:39375 (J;US)
Prevention of impurity accumulation in classical tokamaks, 11:39406 (J;JP)
Lower Hybrid Heating
Coupling of fast waves in the LHRF to non-uniform plasma, 11:39340 (BA;US)
Reviews
Particle and impurity control in toroidal fusion devices, 11:39375 (J;US)
Sputtering
Simulations of Tokamak sputtering conditions with high energy particle beams, 11:39413 (BA;US)

TOKAMAK FUSION TEST REACTOR
See TFTR TOKAMAK

TOKAMAK TYPE REACTORS
See also DOUBLET REACTORS
ISX TOKAMAK
JET TOKAMAK
TFTR TOKAMAK
Cryogenics
Liquid nitrogen cooling considerations of the compact ignition tokamak, 11:39358 (R;US)
ICR Heating
Analysis of dielectric-filled waveguide coupling to plasmas in the ICRF, 11:39378 (J;US)

TOKYO-4 REACTOR
See FUKUSHIMA-4 REACTOR

TOMOGRAPHY
See also GRAZING INCIDENCE TOMOGRAPHY
Data Acquisition
Data acquisition system for geophysical diffraction tomography, 11:37540 (RA;US)

TOPONIUM
Decay
Monte Carlo simulation of jets in the upsilon and t-quarkonium regions, 11:39198 (J;US)
Jet Model
Monte Carlo simulation of jets in the upsilon and t-quarkonium regions, 11:39198 (J;US)

TOWNSEND AVALANCHE
See TOWNSEND DISCHARGE

TOWNSEND DISCHARGE
Charged-Particle Transport
Electron transport measurements in methane using an improved pulsed Townsend technique, 11:39080 (J;US)
Electron Attachment
Electron transport measurements in methane using an improved pulsed Townsend technique, 11:39080 (J;US)
TOWNSEND FORMULA
See TOWNSEND DISCHARGE
TOWNSEND THEORY
See TOWNSEND DISCHARGE
TOXIC MATERIALS
See also TOXINS
Accidents
Bhopal: lessons learned, 11:38858 (R;US)
Data Acquisition
Chemical data. EPA's data collection practices and procedures on chemicals, 11:38076 (R;US)
Solvent Extraction
Supercritical fluid processing, 11:38906 (J;US)
TOXICITY
Data Base Management
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)
Information
Coal conversion (liquefaction/gasification): engineering considerations and relationships among physical, chemical and toxicological properties of resulting materials, 11:37390 (BA;US)
Research Programs
Report of activities 1947-1985, 11:38946 (R;US)
TOXINS
Detection
Studies on the immunochemical techniques for detection of selected fungal and dinoflagellate toxins. Annual progress report No. 2, 1 August 1982-31 July 1983, 11:38939 (R;US)
TRAFFIC CONTROL
Safety
Aviation safety. Serious problems concerning the Air Traffic Control work force, 11:38975 (R;US)
TRANS 104 ELEMENTS
Collisions
In search of spontaneous positron creation, 11:39105 (J;US)
TRANSBOUNDARY POLLUTION
See TRANSFRONTIER POLLUTION
TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
TRANSFER REACTIONS
For nuclear reactions only; see also CHARGE EXCHANGE and ELECTRON TRANSFER.
Research Programs
Direct nuclear reactions, 11:39272 (B;US)
TRANSFORMATIONS (PHASE)
See PHASE TRANSFORMATIONS
TRANSFORMER OILS
See INSULATING OILS
TRANSFORMERS
Decontamination
Decontamination of PCB transformers using Ensco, Inc.'s RETRO-1 process, 11:37443 (RA;US)
Decontamination of an askarel-filled network transformer, 11:37447 (RA;US)
PCB transformer decontamination rather than burial, 11:37445 (RA;US)
Retrofilling askarel transformers - words of caution, 11:37446 (RA;US)
Design
Retrofilling askarel transformers - words of caution, 11:37446 (RA;US)
Fires
PCB accident in France, 11:38877 (RA;US)
PCB capacitor fire at IREQ's High Voltage Laboratory and subsequent decontamination, 11:37453 (RA;US)
PCBs fires: preliminary correlation of chlorobenzene and PCB contents of the fluid with PCDF and PCDD contents of soot, 11:38799 (RA;US)
Polychlorinated dibenzofuran contamination of the State Highway Department Office Building in Santa Fe, New Mexico as a result of a PCB transformer malfunction, 11:38868 (RA;US)
Insulating Oils
FORMEL - a new, safer, non-flammable dielectric and coolant for transformers, 11:38514 (RA;US)
Mainteaance
Decontamination of PCB transformers using Ensco, Inc.'s RETRO-1 process, 11:37443 (RA;US)
Diffusional modeling during transformer retrofill, 11:37442 (RA;US)
PCB removals - options and implementation, 11:37448 (RA;US)
Regulations
Fire involving PCB transformers further regulations managing the risk, 11:38089 (RA;US)
TRANSFRONTIER POLLUTION
For nonradioactive pollution only; for radioactive contamination use TRANSFRONTIER CONTAMINATION.
Inventories
Inventory of current environmental monitoring projects in the US-Canadian transboundary region, 11:38101 (R;US)
TRANSIENT REACTOR TEST FACILITY
See TREAT REACTOR
TRANSIENT SPECIES
See REACTION INTERMEDIATES
TRANSISTORS
Temperature Effects
Effect of temperature on data retention of SNOS transistors, 11:38650 (R;US)
TRANSITION ELEMENT COMPLEXES
See also COBALT COMPLEXES
IRON COMPLEXES
RUTHENIUM COMPLEXES
Catalytic Effects
Study of some transition metal complexes as process catalysts. Quarterly report, March 1-May 31, 1986, 11:37267 (R;US)
Chemical Preparation
Study of some transition metal complexes as process catalysts. Quarterly report, March 1-May 31, 1986, 11:37267 (R;US)
TRANSITIONS (PHASE)
See PHASE TRANSFORMATIONS
TRANSMISSION ELECTRON MICROSCOPY
Sample Preparation
Localized ion milling of metallic and ceramic TEM specimens, 11:38226 (R;US)
TRANSMISSION LINES
See POWER TRANSMISSION LINES
TRANSPORT (ENVIRONMENTAL)
See ENVIRONMENTAL TRANSPORT
TRANSPORTATION SYSTEMS
Cost
Report on potential for cost reductions in inland transportation of US coal exports. Final report, 11:37358 (R;US)
Energy Consumption
Energy consumption in the transportation services sector. Final report, 11:38188 (R;US)
TRANSURANIUM ELEMENTS
See also PLUTONIUM
Beta Decay
Beta decay of neutron-rich transuranic nuclei, 11:38783 (R;US)
TRANSURANIUM WASTES
See ALPHA-BEARING WASTES
TRAVELLING WAVE TUBES
Computerized Simulation
Backward wave oscillators with rippled wall resonators: Analytic theory and numerical simulation, 11:38660 (BA;US)
TREAT REACTOR
Fuel Pins
Fuel pin failure in the PFR/TREAT experiments, 11:38018 (R;US)
Reactor Safety Experiments
Post-failure material movement in the PFR/TREAT experiments, 11:38019 (R;US)
1,3,5-TRIAMINO-2,4,6-TRINITROBENZENE
See TATB

TRITICUM
See WHEAT
TRITIUM
Adsorption
Chemisorption of tritium on graphites at elevated temperatures, 11:38443 (J;US)
Retention of deuterium and tritium in Papyex graphite, 11:38448 (J;NL)
Retention of deuterium and tritium in POCO AXF-5Q graphite, 11:38445 (J;US)
Tritium gettering from air with hydrogen uranyl phosphate, 11:39391 (J;US)
Diffusion
Retention of deuterium and tritium in POCO AXF-5Q graphite, 11:38445 (J;US)
Gettering
Tritium gettering from air with hydrogen uranyl phosphate, 11:39391 (J;US)
Ground Disposal
Waste migration studies at the Savannah River Plant burial ground, 11:37538 (RA;US)
Laser Implosions
High—aspect-ratio laser-fusion targets driven by 24-beam uv laser radiation, 11:39379 (J;US)
Permeability
Hydrogen- and tritium permeation within high temperature reactor (HTR) development. Results for the alloy Hastelloy X, 11:37981 (R;DE;In German)
Polarization
Nuclear spin polarization of solid deuterium—tritium, 11:39390 (J;US)
Radiobiology
Tritium toxicity program in the Medical Department at Brookhaven National Laboratory, 11:38952 (J;US)
Radioecological Concentration
Tritium migration at the low-level radioactive waste disposal site at Maxey Flats near Morehead, Kentucky, 11:37558 (RA;US)
Spin Orientation
Nuclear spin polarization of solid deuterium—tritium, 11:39390 (J;US)
Toxicity
Tritium toxicity program in the Medical Department at Brookhaven National Laboratory, 11:38952 (J;US)
TRITIUM TARGET
Pion Reactions
Three-particle systems at low and intermediate energies, 11:39211 (R;CA)
TROJAN REACTOR
Prescott, Oregon, USA
Nuclear Engineering
Developing a system engineering program to improve performance and reliability, 11:37905 (J;US)
Systems Analysis
Developing a system engineering program to improve performance and reliability, 11:37905 (J;US)
TROPICAL REGIONS
Deforestation
Comparison of tropical forest surveys, 11:38859 (R;US)
TROUT
Anatomy
Stock identification of Columbia River chinook salmon and steelhead trout. Annual progress report, 11:37719 (R;US)
Electrophoresis
Stock identification of Columbia River chinook salmon and steelhead trout. Annual progress report, 11:37719 (R;US)
Fisheries
Fisheries enhancement in the Fish Creek Basin: an evaluation of in-channel and off-channel projects, 1984. Annual report 1984, 11:38944 (R;US)
TRU WASTES
See ALPHA-BEARING WASTES
TRUCKS
Air Pollution Abatement
Analysis of the environmental need for NO/sub x/ controls on light duty trucks and heavy duty vehicles, 11:38851 (J;US)
Environmental Impacts
Analysis of the environmental need for NO/sub x/ controls on light duty trucks and heavy duty vehicles, 11:38851 (J;US)
TRX-1
See REVERSE-FIELD PINCH
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Deformation
Thermally induced stresses and deformations in layered composite tubes, 11:38390 (RA;US)
Testing
Spirally fluted tube heat exchanger as a condenser and evaporator, 11:38621 (R;US)
Thermal Stresses
Thermally induced stresses and deformations in layered composite tubes, 11:38390 (RA;US)
TUBES (CONDUITS)
See PIPES
TUFF
Mechanical Properties
G-tunnel heated block experiment. Final report (NNWSI project), 11:39006 (R;US)
Physical Properties
Variation in properties of nuclear test areas and media at the Nevada Test Site, 11:39008 (R;US)
Stresses
G-tunnel heated block experiment. Final report (NNWSI project), 11:39006 (R;US)
Temperature Effects
G-tunnel heated block experiment. Final report (NNWSI project), 11:39006 (R;US)
Thermodynamic Properties
G-tunnel heated block experiment. Final report (NNWSI project), 11:39006 (R;US)
TUMORS

TUNGSTEN
Field Emission
Field emission energy distribution study of laser-induced thermal effects, 11:38320 (J;US)
Laser-Radiation Heating
Field emission energy distribution study of laser-induced thermal effects, 11:38320 (J;US)
Molecule Collisions
MPI spectroscopy of NH_3: Application to rotational energy accommodation on surfaces, 11:38482 (BA;US)
Sorptive Properties
Island coalescence in a chemisorbed overlayer, 11:38321 (J;US)
TUNGSTEN OXIDES
Chemical Reaction Kinetics
Dew point/temperature curves for selected metal/metal oxide systems in hydrogen atmospheres, 11:38510 (J;US)
TURBINE BLADES
Comparative Evaluations
Simplified analysis of the forces and movements of the Axel Egnell-turbine, 11:37823 (R;SE;In Swedish)
Cooling
Advanced turbine study. Final Report, 1 August 1982-15 August 1985, 11:38250 (R;US)
Corrosion
Low-temperature hot corrosion in gas turbines - a review of causes and coatings transfer, 11:38672 (J;IT)
Corrosion Resistance
Vacuum plasma spray turbine bucket coating development, 11:38329 (J;IT)
Design
Advanced turbine study. Final Report, 1 August 1982-15 August 1985, 11:38250 (R;US)
Dynamic Loads
Design method for the calculation of performances and flap movement of flexible wind turbine blades, 11:37825 (R;NL;In Dutch)
Fabrication
Advanced turbine study. Final Report, 1 August 1982-15 August 1985, 11:38250 (R;US)

Film Cooling
Heat transfer measurements with film cooling on a turbine blade profile in cascade, 11:38632 (J;IT)
Flexibility
Design method for the calculation of performances and flap movement of flexible wind turbine blades, 11:37825 (R;NL;In Dutch)
Protective Coatings
Low-temperature hot corrosion in gas turbines - a review of causes and coatings transfer, 11:38672 (J;IT)
Vacuum plasma spray turbine bucket coating development, 11:38329 (J;IT)
TURBULENT FLOW
Three-Dimensional Calculations
Method for computing three-dimensional turbulent flows, 11:39124 (J;US)
Two-Dimensional Calculations
Possible nonstationary solutions in the turbulence of a two-dimensional liquid, 11:39123 (TG;US)
TURKEY POINT-3 REACTOR
Turkey Point, Florida, USA
Management
Managing the nuclear utility, 11:38133 (J;US)
TURKEY POINT-4 REACTOR
Miami, Florida, USA
Management
Managing the nuclear utility, 11:38133 (J;US)
TURTLES
Population Dynamics
Biomass of freshwater turtles: a geographic comparison, 11:38889 (J;US)
Reproduction
Biomass of freshwater turtles: a geographic comparison, 11:38889 (J;US)
TWO-PHASE FLOW
Mathematical Models
Developments in the simulation and design of multiphase pipeline systems, 11:37480 (RA;NO)
Measuring Instruments
Active ultrasonic cross-correlation flowmeters for mixed-phase pipe flows, 11:38635 (J;US)
Numerical Solution
Study of numerical solution methods for two-phase flows, 11:38754 (R;US)

U

U CODES
Analysis of the environmental need for NO/sub x/ controls on light duty trucks and heavy duty vehicles, 11:38851 (J;US)
Initial study of thermal energy storage in unconfined aquifers (UCATES), 11:38069 (R;US)
UAR

ENRICHED URANIUM
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 11:39076 (R;US)
Diffusion Welding
Use of electrodeposited silver as an aid in diffusion welding, 11:38342 (J;US)
Market
Monitoring the viability of the U.S. uranium industry: a suggested approach, 11:37527 (J;US)
Monitoring
Monitoring the viability of the U.S. uranium industry: a suggested approach, 11:37527 (J;US)
Nondestructive Analysis
Nondestructive assay of uranium in infinitely-thick material, 11:38478 (J;NL)
Oxidation
Application of secondary ion mass spectrometry to the study of a corrosion process: oxidation of uranium by water, 11:38305 (R;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
URANIUM 234
Radioecological Concentration
Uranium isotope distribution in ground water at the Shiprock Mill site, 11:38913 (BA;US)
URANIUM 238
Radioecological Concentration
Uranium isotope distribution in ground water at the Shiprock Mill site, 11:38913 (BA;US)
URANIUM 238 REACTIONS
One-Nucleon Transfer Reactions
Sub-Coulomb transfer in $^{238}U+^{238}U$ collisions, 11:39252 (R;DE)
URANIUM 238 TARGET
Neutron Reactions
Neutron scattering on deformed nuclei, 11:39216 (J;US)
Uranium 238 Reactions
Sub-Coulomb transfer in $^{238}U+^{238}U$ collisions, 11:39252 (R;DE)
URANIUM ALLOYS
See also URANIUM BASE ALLOYS
Auger Electron Spectroscopy
Auger and electron energy loss study of the electronic structure of U—M(M = Fe,Co,Ni) metallic glasses, 11:39092 (J;US)
Energy-Loss Spectroscopy
Auger and electron energy loss study of the electronic structure of U—M(M = Fe,Co,Ni) metallic glasses, 11:39092 (J;US)
Physical Properties
Heavy fermion materials (UBe_{13}), 11:38247 (R;US)
URANIUM BASE ALLOYS
Quenching
Computer simulation of immersion quenching of uranium-0.75 wt % titanium alloy cylinders, 11:38302 (R;US)
Thermal simulation of quenching uranium-0.75% titanium alloy in water, 11:38230 (R;US)
URANIUM DEPOSITS
Exploration
Uranium in early proterozoic phosphate-rich metasedimentary rocks of east-central Minnesota, 11:37508 (J;US)
URANIUM HEXAFLUORIDE
Data Analysis
Analysis of the infrared-active stretching fundamental of UF_6, 11:38530 (BA;US)
Materials Handling
Rupture of Model 48Y UF_6 cylinder and release of uranium hexafluoride. Cylinder overfill, March 12-13, 1986. Investigation of a failed UF_6 shipping container. Volume 2, 11:37652 (R;US)
Vibrational States
Measurement of the infrared-active stretching fundamental (ν_3) of UF_6, 11:38529 (BA;US)
URANIUM II
See URANIUM 234
URANIUM ISOTOPES
See also URANIUM 234
URANIUM 238

Nuclear Reaction Yield
Production of cold target-like fragments in the reaction of $^{48}Ca + ^{248}Cm$, 11:39254 (J;US)

URANIUM MINES
Radiation Hazards
Uranium miner lung cancer study. Final report, 11:37647 (R;US)

URANIUM OXIDES
See also URANIUM TRIOXIDE
Absorption Spectra
Theoretical study of the radiative and kinetic properties of selected metal oxides and air molecules. Final technical report, 15 January 1983-5 February 1985, 11:38489 (R;US)
Infrared Spectra
Theoretical study of the radiative and kinetic properties of selected metal oxides and air molecules. Final technical report, 15 January 1983-5 February 1985, 11:38489 (R;US)
Ions
Theoretical study of the radiative and kinetic properties of selected metal oxides and air molecules. Final technical report, 15 January 1983-5 February 1985, 11:38489 (R;US)

URANIUM SILICIDES
Magnetic Properties
Evidence of a magnetic gaplike excitation in URu_2Si_2, 11:38434 (J;US)
Magnetic behavior in the U/sub 1-x/Th/sub x/Cu_2Si_2 system, 11:38406 (R;US)
Neutron Diffraction
Evidence of a magnetic gaplike excitation in URu_2Si_2, 11:38434 (J;US)

URANIUM TRIOXIDE
Production
Rockwell Hanford Operations. Chemical processing monthly report, March 1986, 11:37513 (R;US)

URANYL PHOSPHATES
Sorptive Properties
Tritium gettering from air with hydrogen uranyl phosphate, 11:39391 (J;US)

URBAN AREAS
Air Pollution Monitoring
Analysis of wet deposition at an urban location, 11:38848 (J;US)
Dry deposition to snow in an urban area, 11:38847 (J;US)

URETHANE
Toxicity
Inhibition of mouse lung tumor development by hyperoxia, 11:38962 (J;US)

W

W MINUS BOSONS
Prior to October 1985 this concept was indexed to INTERMEDIATE VECTOR BOSONS.
Composite Models
Signals for composite-W^{+-} production in γp collisions, 11:39170 (J;US)
Photoproduction
Signals for composite-W^{+-} production in γp collisions, 11:39170 (J;US)
W PLUS BOSONS
Prior to October 1985 this concept was indexed to INTERMEDIATE VECTOR BOSONS.
Composite Models
Signals for composite-W^{+-} production in γp collisions, 11:39170 (J;US)
Photoproduction
Signals for composite-W^{+-} production in γp collisions, 11:39170 (J;US)
WALLS
Heat Flow
Surface temperature measurement techniques for a calibrated hot box test specimen. Final report, 11:38165 (R;US)
Heat Transfer
Heat transfer characteristics of walls with similar thermal resistance values. Final report, 11:38164 (R;US)
Temperature Measurement
Surface temperature measurement techniques for a calibrated hot box test specimen. Final report, 11:38165 (R;US)
Thermal Insulation
Veneer wall on the existing houses, 11:38162 (R;DK;In Danish)
WASTE DISPOSAL
See also RADIOACTIVE WASTE DISPOSAL
SANITARY LANDFILLS
Demonstration Programs
Pyroplasma detoxification of askarel fluids, 11:37841 (RA;US)
Sampling and analysis criteria used to evaluate the efficacy of - polychlorinated biphenyl (PCB) destruction, 11:38090 (RA;US)
Land Pollution
Installation Restoration Program, Phase 2 - Confirmation/Quantification Stage i, Moody Air Force Base, Georgia. Final technical report, January 1984-December 1985, 11:38891 (R;US)
Water Pollution
Installation Restoration Program, Phase 2 - Confirmation/Quantification Stage i, Moody Air Force Base, Georgia. Final technical report, January 1984-December 1985, 11:38891 (R;US)
WASTE FORMS
Leaching
Accelerated Leach Test(s) Program. Annual report, 11:37637 (R;US)
Determining leach rates of monolithic waste forms, 11:38402 (R;US)
Waste salt disposal at the Savannah River Plant (Saltstone), 11:37605 (R;US)
Radiolysis
Radiolytic gas generation from cement-based waste hosts for DOE low-level radioactive wastes, 11:38401 (R;US)
WASTE HEAT
Transport
Transport of waste heat or primary heat over long distances - supplemented by simple surveying of waste heat sources, 11:38199 (R;SE;In Swedish)
WASTE HEAT UTILIZATION
Drying
Exploitation of the heat of dry kiln exhaust air, 11:38205 (R;FI;In Finnish)
WASTE MANAGEMENT
See also RADIOACTIVE WASTE MANAGEMENT
WASTE DISPOSAL
WASTE TRANSPORTATION
Planning
Radioactive and non-radioactive polychlorinated biphenyl (PCB) management at Hanford, 11:37464 (RA;US)
WASTE TRANSPORTATION
Biological Radiation Effects
Projected environmental impacts of radioactive material transportation to the first US repository site, 11:37656 (R;US)
Containers
Transuranic package transporter. TRUPACT-I. Safety analysis report for packaging (SARP). Volume 1, 11:38554 (R;US)
Decision Making
Methodology to evaluate the impact of transportation on systems decisions (Using TRANSIT and WASTES models), 11:37521 (R;US)
Risk Assessment
Railroad transportation of spent nuclear fuel, 11:37525 (R;US)
WASTE WATER
See also SHALE TAR WATER
Anaerobic Digestion
Biotechnical methods for saving energy in the pulp and paper industry, 11:38204 (R;FI;In Finnish)
Purification of effluents from the wet-carbonization process of peat (PEKILO process), 11:37304 (RA;SE)
Treatability studies on two thermal peat dewatering schemes, 11:37351 (RA;SE)
Chemical Composition
Waste water characteristics of five peat dewatering processes, 11:37302 (RA;SE)
Energy Consumption
Biotechnical methods for saving energy in the pulp and paper industry, 11:38204 (R;FI;In Finnish)
Fermentation
Purification of effluents from the wet-carbonization process of peat (PEKILO process), 11:37304 (RA;SE)
Quantitative Chemical Analysis
GC/MS determination of amines, 11:37507 (BA;US)
Toxicity
Treatability studies on two thermal peat dewatering schemes, 11:37351 (RA;SE)
Water Treatment
Control of organic substances in water and waste water, 11:38900 (R;US)

Waste water characteristics of five peat dewatering processes, 11:37302 (RA;SE)

West European and East Asian perspectives on defense, deterrence, and strategy. Volume 2. Western European perspectives on defense, deterrence, and strategy. Technical report, 1 December 1982-15 May 1984, 11:38761 (R;US)

WESTINGHOUSE STANDARD REACTOR
Prior to 1975, PWR/41 TYPE REACTORS was used.
Reactor Protection Systems
Reducing scrams by modifying reactor setpoints for a Westinghouse four-loop plant, 11:38054 (J;US)
Reactor Safety
Reducing scrams by modifying reactor setpoints for a Westinghouse four-loop plant, 11:38054 (J;US)
Scram
Reducing scrams by modifying reactor setpoints for a Westinghouse four-loop plant, 11:38054 (J;US)
Westinghouse domestic PWR automatic trip evaluation, 11:38056 (J;US)

WET OXIDATION PROCESSES
Waste Water
Treatability studies on two thermal peat dewatering schemes, 11:37351 (RA;SE)

WETLANDS
See also MARSHES
SWAMPS
Drainage
Drainage water quality of peat mining areas, 11:37319 (RA;SE)
Effects of mire drainage and peat extraction on benthic invertebrates and fish, 11:37322 (RA;SE)
Peat deposits drainage and environment, 11:37321 (RA;SE)
Some concepts to prevent the environmental effects of the peat production, 11:37301 (RA;SE)
Exploitation
Environmental aspects of peat deposits development in USSR and the problems of its ecological and economic valuation, 11:37324 (RA;SE)
Peatland and its environment as a living ecological entity, 11:37317 (RA;SE)
Harvesting
Effects of mire drainage and peat extraction on benthic invertebrates and fish, 11:37322 (RA;SE)
Mining
Nutrient transport in runoff water from Finnish peatland drainage and peat mining areas, 11:37320 (RA;SE)

Pollution Laws
Environmental regulations to the development and utilization of Minnesota's peat resources - energy production, 11:37392 (RA;SE)
WHEAT
Carbon Dioxide Fixation
Appearance and accumulation of C_4 carbon pathway enzymes in developing wheat leaves, 11:38924 (J;US)
Enzyme Activity
Appearance and accumulation of C_4 carbon pathway enzymes in developing wheat leaves, 11:38924 (J;US)
WIGGLER MAGNETS
Magnetic Fields
Electron trajectories through a linear wiggler calculated with a three dimensional ray tracing program, 11:38695 (BA;US)
WILD ANIMALS
Habitat
Wildlife and wildlife habitat loss assessment at Detroit Big Cliff Dam and Reservoir Project, North Santiam River, Oregon. Final report, 11:37724 (R;US)
Wildlife and wildlife habitat loss assessment at Lookout Point Dam and Reservoir Project, Middle Fork Willamette River, Oregon. Final report, 11:37726 (R;US)
Wildlife and wildlife habitat loss assessment at Hills Creek Dam and Reservoir Project, Middle Fork Willamette, River, Oregon. Final report, 11:37721 (R;US)
Wildlife and wildlife habitat loss assessment at Cougar Dam and Reservoir Project, South Fork McKenzie River, Oregon. Final report, 11:37725 (R;US)
Wildlife and wildlife habitat loss assessment at Green Peter-Foster Project, Middle Fork Santiam River, Oregon. Final report, 1985, 11:37722 (R;US)
Wildlife and wildlife habitat loss assessment at Dexter Dam and Reservoir Project, Middle Fork Willamette River, Oregon. Final report, 11:37723 (R;US)
WIND
Turbulence
Measurements of wind velocities in a street canyon, 11:38833 (J;GB)
Velocity
Measurements of wind velocities in a street canyon, 11:38833 (J;GB)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See WIND TURBINES
WIND POWER
Catalogs
Addresses of: 1. Producers and dealers of wind turbines and wind turbine blades in the Netherlands. 2. Bureaus, institutions and associations in the field of wind energy, 11:37819 (B;NL;In Dutch)
Economic Analysis
Review report on design study and economic assessment of multi-unit offshore wind energy conversion systems applications, 11:37820 (R;US)
WIND POWER PLANTS
FC-windpump project, 11:37821 (R;DK)
Electric Generators
Electric windmill-generators. Characteristics, adaptation and control, 11:37822 (R;DK;In Danish)
Simulation
Wind power station with variable speed. A preliminary study, 11:37824 (R;SE;In Swedish)
WIND TUNNELS
Meetings
Special course on cryogenic technology for wind tunnel testing, 11:38544 (R;FR)
WIND TURBINES
Catalogs
Addresses of: 1. Producers and dealers of wind turbines and wind turbine blades in the Netherlands. 2. Bureaus, institutions and associations in the field of wind energy, 11:37819 (B;NL;In Dutch)
Commercialization
Review of US wind energy, 11:37827 (BA;US)
Comparative Evaluations
Simplified analysis of the forces and movements of the Axel Egnell-turbine, 11:37823 (R;SE;In Swedish)
Efficiency
Output calculations of the GIROMILL wind turbine, 11:37826 (R;NL;In Dutch)
Electric Generators
Electric windmill-generators. Characteristics, adaptation and control, 11:37822 (R;DK;In Danish)
Energy Conversion
Review report on design study and economic assessment of multi-unit offshore wind energy conversion systems applications, 11:37820 (R;US)
Mathematical Models
Simplified analysis of the forces and movements of the Axel Egnell-turbine, 11:37823 (R;SE;In Swedish)
Wind power station with variable speed. A preliminary study, 11:37824 (R;SE;In Swedish)
Research Programs
Review of US wind energy, 11:37827 (BA;US)
Rotation
Wind power station with variable speed. A preliminary study, 11:37824 (R;SE;In Swedish)
Turbine Blades
Design method for the calculation of performances and flap movement of flexible wind turbine blades, 11:37825 (R;NL;In Dutch)
WINDOWS
Fillers
Laboratory testing of joints around wooden window frames. Effect of the external use of mastics on moisture content of the frame wood, 11:38177 (R;DK;In Danish)
Joints
Laboratory testing of joints around wooden window frames. Effect of the external use of mastics on moisture content of the frame wood, 11:38177 (R;DK;In Danish)
Thermal Insulation
Transparent superinsulating materials: new aspects in solar technology, 11:37790 (RA;FR)
WIND-POWERED PUMPS
Wind-mechanical pumps only; for wind-electric pumps use WIND TURBINES and PUMPS.
FC-windpump project, 11:37821 (R;DK)
WOLFRAM
See TUNGSTEN
WOOD
Combustion
Comparison of peat and wood chips fired boiler plants and district heating systems, 11:37374 (R;FI;In Finnish)
Economic comparison of coal and wood for industrial steam generation, 11:37379 (BA;US)
Combustion Products
Formation of emissions from combustion of wood and peat at district heating plants, 11:37364 (RA;SE)
Drying
Energy research of the mechanical wood processing industry in 1980-1982. Handbook of timber drying, 11:38203 (R;FI;In Finnish)
Gasification
Main fans for wood-gas systems: evaluation and design. Special report, 11:37701 (R;US)
Practical test on a wood gasifier using whole-tree thorn-bush chips. Special report, 11:37702 (R;US)
Technical development in order to obtain satisfactory combustion, 11:37262 (RA;SE)
Woodgas burners: background and design. Special report, 11:37700 (R;US)
Moisture
Energy research of the mechanical wood processing industry in 1980-1982. Handbook of timber drying, 11:38203 (R;FI;In Finnish)
WOOD ALCOHOL
See METHANOL
WOOD BURNING FURNACES
Design
Outdoor furnace heats home. [Final report], 11:38153 (R;US)

Performance
Outdoor furnace heats home. [Final report], 11:38153 (R;US)
WOOD FUELS
Use of this term is limited to policy, feasibility, and socio-economic studies. For wood properties use WOOD.
Combustion
Emissions from wood and peat fired district heating plants, 11:37836 (R;FI;In Finnish)
Safe production and use of domestic fuels, part 2. Fire detectors, 11:37346 (R;FI;In Finnish)
Drying
Back pressure drying of solid, moist fuels, 11:37359 (R;SE;In Swedish)
Dryers for wood fuels: design and evaluation. Special report, 11:37711 (R;US)
Drying of wood fuel in oil and vacuum, 11:37712 (R;SE;In Swedish)
Fuel Feeding Systems
Constructional solutions of fuel handling equipment needed in heating plants using domestic fuel, 11:37357 (R;FI;In Finnish)
Storage
Drying of wood fuel in oil and vacuum, 11:37712 (R;SE;In Swedish)
WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Drying
Energy research of the mechanical wood processing industry in 1980-1982. Handbook of timber drying, 11:38203 (R;FI;In Finnish)
Energy Conservation
Exploitation of the heat of dry kiln exhaust air, 11:38205 (R;FI;In Finnish)
Kilns
Exploitation of the heat of dry kiln exhaust air, 11:38205 (R;FI;In Finnish)
Waste Heat Utilization
Exploitation of the heat of dry kiln exhaust air, 11:38205 (R;FI;In Finnish)
Waste Product Utilization
Procurement and marketing of forest residues, 11:37754 (BA;US)
WOOD WASTES
Chemical Analysis
Radar technique for the measurement of dry matter content in wood fuels. Stage I, 11:37714 (R;SE;In Swedish)
Losses
Needle litter in heaps of logging residues during a growing period, 11:37745 (R;SE;In Swedish)
Pyrolysis
Charcoal and heat produced by straw and wood combustion. Possibilities, methods and economy, 11:37710 (R;DK;In Danish)
WORKERS
See PERSONNEL
WORKING (MATERIALS)
See MATERIALS WORKING
WUERENLINGEN PROTEUS REACTOR
See PROTEUS REACTOR

X

X RADIATION
Interferometry
Long baseline neutron interferometry, 11:38720 (RA;US)
XENON
Adsorption
X-ray study of orientational epitaxy in rare gas monolayers on graphite, 11:38440 (J;US)
Dimers
Gerade electronic states of Xe_2 observed using resonantly enhanced multiphoton ionization, 11:39081 (J;US)
Electronic Structure
Gerade electronic states of Xe_2 observed using resonantly enhanced multiphoton ionization, 11:39081 (J;US)
Excitation
Atomic inner-shell threshold excitation with synchrotron radiation, 11:39103 (J;US)
Multi-Photon Processes
Gerade electronic states of Xe_2 observed using resonantly enhanced multiphoton ionization, 11:39081 (J;US)
Photon Transport
Photon absorption graphs: 1 keV to 10 MeV, 11:39276 (R;NL)
XENON CHLORIDES
Electron Beam Pumping
E-beam-induced fluorescence of excimers in cryogenic solutions, 11:38604 (BA;US)
Fluorescence
E-beam-induced fluorescence of excimers in cryogenic solutions, 11:38604 (BA;US)
XENON FLUORIDES
Electron Beam Pumping
E-beam-induced fluorescence of excimers in cryogenic solutions, 11:38604 (BA;US)
Fluorescence
E-beam-induced fluorescence of excimers in cryogenic solutions, 11:38604 (BA;US)
X-RASERS
See X-RAY LASERS
X-RAY DOSIMETRY
Techniques of absolute low energy x-ray calibration, 11:39279 (R;US)
X-RAY EMISSION ANALYSIS
Mirrors
Potential applications of artificially structured materials for x-ray microanalysis, 11:38473 (R;US)
Reflective Coatings
Potential applications of artificially structured materials for x-ray microanalysis, 11:38473 (R;US)
X-RAY LASERS
Computer Calculations
The advantage of foams in plasma-implosion-driven X-ray laser targets, 11:38594 (BA;US)
Optical Pumping
The advantage of foams in plasma-implosion-driven X-ray laser targets, 11:38594 (BA;US)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Calibration
Facilities and techniques for x-ray diagnostic calibration in the 100-eV to 100-keV energy range, 11:39280 (R;US)
Techniques of absolute low energy x-ray calibration, 11:39279 (R;US)
Calibration Standards
High intensity line source for x-ray spectrometer calibration, 11:38728 (R;US)
Synchrotron Radiation Sources
Concept for a synchrotron light source with superconducting bending magnets for the production of microstructures by the LIGA-process, 11:38714 (R;DE;In German)
X-RAY SPECTROMETERS
Calibration
High intensity line source for x-ray spectrometer calibration, 11:38728 (R;US)
Slitless, intensified readout, gated spectrometer: wavelength and efficiency calibration, time response characterization, 11:38727 (R;US)
Design
Low energy x-ray spectra measured with a mercuric iodide energy dispersive spectrometer in a scanning electron microscope, 11:38716 (R;US)
Testing
Low energy x-ray spectra measured with a mercuric iodide energy dispersive spectrometer in a scanning electron microscope, 11:38716 (R;US)

Timing Properties
Slitless, intensified readout, gated spectrometer: wavelength and efficiency calibration, time response characterization, 11:38727 (R;US)

XUV
See EXTREME ULTRAVIOLET RADIATION

XYLENOLS
Anaerobic Digestion
Anaerobic SBR treatment of coal conversion wastewaters. Third quarterly report, 11:37306 (R;US)

Y

YANKEE CONNECTICUT REACTOR
See CONNECTICUT YANKEE REACTOR

YANKEE VERMONT REACTOR
See VERMONT YANKEE REACTOR

YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
FERRITE GARNETS

YTTRIUM BORIDES
Electronic Structure
Electronic structure of boron-rich borides, 11:38368 (J;US)

YTTRIUM CARBIDES
Electronic Structure
Electronic structure of boron-rich borides, 11:38368 (J;US)

YTTRIUM IONS
Mass Spectroscopy
Application of Pattern Recognition to the analysis of metal ion chemical ionization mass spectra, 11:38485 (BA;US)

YTTRIUM ISOTOPES
Rotational States
Observations of 'pairing-free' K/sup π/=1$^+$ rotational bands in deformed odd-odd A approx. equal to 100 nuclei, 11:39241 (J;NL)

YTTRIUM OXIDES
Microstructure
Correlation between the stress and microstructure in bias-sputtered ZrO_2-Y_2O_3 films, 11:38386 (J;CH)
Stresses
Correlation between the stress and microstructure in bias-sputtered ZrO_2-Y_2O_3 films, 11:38386 (J;CH)

YTTRIUM PHOSPHATES
Electron Spin Resonance
EPR observations of trivalent titanium in orthophosphate single crystals, 11:38495 (J;US)
Titanium Additions
EPR observations of trivalent titanium in orthophosphate single crystals, 11:38495 (J;US)

YUCCA MOUNTAIN
Meteorology
Meteorological tower data, Yucca Ridge (YR) site, January-June 1983. Nevada Nuclear Waste Storage Investigations Project (NNWSI project), 11:38787 (R;US)
Radioactive Waste Facilities
Technical correspondence in support of the final environmental assessment (NNWSI Project), 11:37643 (R;US)

Z

ZAMBIA
Energy Consumption
Energy survey in Zambezi. Report from a study in Zambia - 1985, 11:38080 (R;DK)

ZEA MAYS
See MAIZE

ZINC
Fracture Properties
Energetics of dislocation relaxation associated with cleavage in Cd-doped zinc crystals as probed by synchrotron topography, 11:38237 (R;US)
Uptake
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:38969 (J;NL)

ZINC 80
Beta-Plus Decay
Half-life of ^{80}Zn: The first measurement for an r-process waiting-point nucleus, 11:39236 (J;US)

ZINC ALLOYS
Energy
Density-functional theory for random alloys: Total energy within the coherent-potential approximation, 11:38312 (J;US)

ZINC OXIDES
Chemical Reaction Kinetics
Dew point/temperature curves for selected metal/metal oxide systems in hydrogen atmospheres, 11:38510 (J;US)
Fabrication
Fabrication of high-field zinc oxide varistors by sol-gel processing, 11:38380 (J;US)
Grain Boundaries
Compositional heterogeneity in ZnO-BaO-CoO varistors, 11:38378 (J;NL)
Raman Spectra
Structure of alkali-zinc silicate glasses by Raman spectroscopy, 11:38379 (J;US)

ZINC PHOSPHATES
Sorptive Properties
Functional pendent groups affecting chemisorption and adherent properties of polyelectrolyte-zinc phosphate composite conversion coatings, 11:38227 (R;US)

ZINC SULFATES
Pyrolysis
Effects of heating rate on solar thermal decomposition of zinc sulfate, 11:37797 (BA;US)
Solar Heating
Effects of heating rate on solar thermal decomposition of zinc sulfate, 11:37797 (BA;US)

ZINC SULFIDE SOLAR CELLS
Cost
Characterization of CdZnS/$CuInSe_2$ thin-film solar cells, 11:37761 (BA;US)
Efficiency
Characterization of CdZnS/$CuInSe_2$ thin-film solar cells, 11:37761 (BA;US)

ZINC TELLURIDES
Crystal Defects
Study of the defect structures in CdTe crystals using synchrotron x-ray topography, 11:38422 (J;US)
Laser Spectroscopy
Laser measurements technique - laser spectroscopy in semiconductors, 11:38484 (BA;US)
Luminescence
Laser measurements technique - laser spectroscopy in semiconductors, 11:38484 (BA;US)
Microstructure
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Molecular Beam Epitaxy
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Superlattices
Molecular beam epitaxial growth of a novel strained-layer superlattice system: CdTe-ZnTe, 11:38417 (J;US)
Topography
Study of the defect structures in CdTe crystals using synchrotron x-ray topography, 11:38422 (J;US)

ZION STATION UNIT-1
See ZION-1 REACTOR

ZION STATION UNIT-2
See ZION-2 REACTOR

ZION-1 REACTOR
Zion, Illinois, USA
Reactor Safety
Development of a scram reduction program, 11:38053 (J;US)
Scram
Development of a scram reduction program, 11:38053 (J;US)
ZION-2 REACTOR
Zion, Illinois, USA
Reactor Kinetics
Self-adjointness of the fast flux in a pressurized water reactor, 11:37921 (J;US)
Reactor Safety
Development of a scram reduction program, 11:38053 (J;US)
Scram
Development of a scram reduction program, 11:38053 (J;US)
ZIRCONIUM
Physical Radiation Effects
Effects of solutes on damage production and recovery in zirconium, 11:38229 (R;US)
ZIRCONIUM 90 TARGET
Neutron Reactions
(n,p) reaction at zero degrees from ^{13}C, ^{13}C, ^{90}Zr, and ^{209}Bi at 65 MeV, 11:39215 (J;US)
Proton Reactions
Polarization transfer and the spin-parity composition of the charge-exchange continuum, 11:39228 (J;US)
ZIRCONIUM ALLOYS
See also ZIRCONIUM BASE ALLOYS
Crystal-Phase Transformations
Structural phase transitions in $HfV_2Hsub(x)$ and Zrsub(0.99)Hfsub(0.01)$V_2Hsub(x)$ observed in time differential perturbed angular correlation studies, 11:38241 (R;DE;In German)
Gettering
Dissociative pumping of the alkanes using nonevaporable getters, 11:38642 (J;US)
ZIRCONIUM BASE ALLOYS
Physical Radiation Effects
Effects of solutes on damage production and recovery in zirconium, 11:38229 (R;US)
ZIRCONIUM HYDRIDES
Crystal-Phase Transformations
Structural phase transitions in $HfV_2Hsub(x)$ and Zrsub(0.99)Hfsub(0.01)$V_2Hsub(x)$ observed in time differential perturbed angular correlation studies, 11:38241 (R;DE;In German)
ZIRCONIUM OXIDES
Damage
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Electrolytic Cells
Alternative method for the removal of oxides of nitrogen and sulfur from combustion processes. Second quarterly technical status report, September 17-March 31, 1986, 11:38531 (R;US)
Laser-Radiation Heating
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Microstructure
Correlation between the stress and microstructure in bias-sputtered ZrO_2-Y_2O_3 films, 11:38386 (J;CH)
Optical Properties
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Physical Radiation Effects
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Raman Spectroscopy
Raman studies of laser damaged single- and multi-layer optical coatings, 11:38458 (BA;US)
Stresses
Correlation between the stress and microstructure in bias-sputtered ZrO_2-Y_2O_3 films, 11:38386 (J;CH)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AC01-82EP12067	**PEI Associates, Inc., Cincinnati, OH (USA)**

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form, DE82000001 or TI82000001, appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 5 to 8% illegibility, available PC and MF; 2 = 9 to 12% illegibility, available MF only; 3 = 13% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

FILE NUMBER CORRELATION

This correlation list is provided for those organizations where document storage is alphanumeric by report number and request may be received by file number. For other information about a document (abstract number, distribution category, availability, and price), please refer to the Report Number Index.

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($5.95).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 85-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
